Ordinance No. 3069 - Pdf

8. BOARD APPOINTMENTS

9. NOTICE OF PROPOSED ORDINANCE(S)

1) There will be no public discussion.
2) A Councilor may ask staff for clarification on the proposed ordinance(s).

10. CITY COUNCIL MEMBER BOARD REPORTS AND COMMENT

11. CITY MANAGER REPORT

12. ADJOURNMENT

MINUTES
City Council
Monday, April 15, 2024 @ 1:00 PM
City Council Chambers, City Hall

PRESENT: Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

ABSENT:

1. OPENING CEREMONIES

1.1 PLEDGE OF ALLEGIANCE - MAYOR ENRIQUEZ.

1.2 PRESENTATION OF CERTIFICATES OF APPRECIATION/PROCLAMATIONS - MAYOR ENRIQUEZ.

Mayor Enriquez recognized the winners of the Water Conservation Poster Contest.

Mayor Enriquez presented Jennifer Gorham with a proclamation for National Safety Telecommunications Week.

Mayor Enriquez presented Jeanne Resendez with a proclamation for Child Abuse Awareness Month.

Mayor Enriquez presented Emma Stahl and Katalina Elizabeth Hadfield with a proclamation for Fair Housing Month.

Mayor Enriquez presented Debra Temple and Kelce Santo with a proclamation for Donate Life Month.

Mayor Enriquez presented Sarah Stegall with a proclamation for Parkinson's Awareness Month.

Mayor Enriquez presented a proclamation to Debbi Moore, Carrie Hamblen, Richard Aguilar, and Joanne Garay for Small Business Week.

1.3 PETS OF THE WEEK.

Amy Defelix, Animal Services Center of the Mesilla Valley presented Pets of the Week.

2. CONFLICT OF INTEREST INQUIRY BY MAYOR AS REQUIRED BY LCMC SECTION 2-27 (E)(2)

2.1

None.

3. PUBLIC PARTICIPATION

3.1

Steven Conn, Member of the Public said I am a long-time resident of Las Cruces. First item is I wondered about getting increased police presence up in the Las Alturas, Quail Run, Mission Bell area. We have family property up there. There has been a couple of lootings recently in the area, some strange characters frankly around there. I think it kind of gets a little neglected with the attention of the East Mesa and I think you know with the border spill over and stuff like that I just wanted to see a little more presence out there for surveillance and the second item is and I am just wondering in addition to the Youth YMCA we are building on El Paseo is there any other kind of business that we are attracting to El Paso. A decade ago, you know we had the Video 4, we had the International Café, all those businesses and now it is just sort of a cannabis dense k slum kind of situation. I just wondered if we were getting anything more there.

Jorge Aguirre, Member of the Public said I am a long-time resident. I am here for the draft for the proposed change to city codes. I just want you to consider that you are going to get a lot of opposition. I was reading the comments, and it is something that I can understand. It is like somebody in an apartment complex, they like their apartment complex and their apartment lifestyle a lot and they want to force everybody in the city to live the way they live and maybe single-family housing some people still like that. Just letting you know that some people don't want to live the same as we did for the last several decades and that sustainability requires more density and change is inevitable and so what I see in the comments and the concerns of the citizens is that they oppose change in any way that it comes and that is okay, we are all entitled to the way we like our lifestyle however resilience in a community, in an organization, in an individual it comes from the ability to adapt to change because change is inevitable. Maybe the requirements and the density of population that we had several decades ago was appropriate for codes that required only single-family housing but that is not the case anymore. We have a large demand for housing. We have a large influx of people coming from everywhere. We have a large amount of people who have limited incomes, who have limited purchasing power in an economy that is limiting more and more people's ability to purchase a home and so the city needs to create new legislation to adapt to the realities of our communities so that we can all prosper together.

Stan Engle, Member of the Public said my son told me that on Friday that the Mayor

came to see him at Central Elementary and if he is telling the truth thank you for showing up at Central Elementary Mr. Mayor. I hope you told all our elementary kids about the importance of democracy. So, I have appeared before this council several times as an advocate for more humane infrastructure improvements around our city and several of my friends also advocate for such things and we brought up issues that we have had with traffic and cars and whatnot, and I think it is aways going to be an ongoing issue. One of the things that struck me the last time I was here a month ago was one of our community members came and said the thing with cars is that it is just about personal responsibility and just like guns she said as well. I don't think it is as black and white as that. You know with an infrastructure that encourages our worst behaviors and with a lack of enforcement of irresponsible distracted driving and red light running, sure you know you can be driving down a street that is nice and wide and say you know what I am just going to run that red light because it just barely turned red and who is going to punish me, right? I have almost been hit several times in a crosswalk. I was walking to Sutherlands to pick up something and I was walking there because I live close by and to the man's credit, he did apologize to me but I told him get off your phone and drive. So personal responsibility only goes so far. Somebody else can pay the price for somebody's lack of personal responsibility. It goes the same for guns as well. I heard in my neighborhood that a gun was stolen out of a car. I don't know if it has been recovered or not but now there is a gun out there that somebody else could pay the price because that gun is out there. My feeling is yes, we are responsible for our actions, but we also have to realize that sometimes our actions mean that other people pay the price. Sometimes saying personal responsibility means that we are trying to not take responsibility for bad policy decisions in the past. We had a great group that talked about fair housing. I am very lucky that I have a cushion, but a lot of people don't. A lot of people have to work and if their rent goes up or if their insurance goes up what choices do they have. They have choices but maybe all of them might not be that great and we need to recognize that as a community so that we can build the social infrastructure to take care of these people and then we can finally say its personal responsibility.

Juan Garcia, Member of the Public said I have been watching Yoli Diaz in this and the County chambers for a year. She has reached out to city, county, and state leaders for help in addressing catastrophic healthcare, cancer. Yoli in my opinion has bounced from one elected official to another with no official commitment for resolving this issue. For whatever reason there is no interest for providing funds for at least a pilot program to address this critical issue in our community. We have unrestricted money to give away, UBI, to those who want category, money to provide unrestricted, "free rides in the Las Cruces bus systems" but "no funds for this issue". The optics are not good. In my opinion it appears that our elected officials prefer one segment of the community over the other. I understand some issues have a higher political return on investment like building another local abortion clinic but not a badly needed major mental health facility. The free bus ride program, "fifteen-minute city model under the guise of rezoning Las Cruces really important to some in these chambers who want to do away with cars on the road. UBI is good for the political resume as some attempt to climb the political ladder. In my opinion caring for the cancer sick is not worth the return on political investment which why it is treated like a hot potato". This weekend I had the opportunity to drive to La Mesa on New Mexico Highway 28. I saw the relocated Little Shop on Main passed Chope's Restaurant, front door was open, not

locked, open to the customers and citizens. No vagrants laying in front of the door or drug addicts shooting up drugs in plain sight or threatening customers. La Mesa gained that thriving small business that was located in downtown Las Cruces. Why did this occur? Because we failed to protect this and many other small businesses that have become forgotten victims and members of the Las Cruces Hall of Shame because in our politicized upside-down world the criminal is most often the victim. I understand we have two ordinances coming up for review and vote, I hope you the council make the right decision in your votes and as I watched the proclamations that just took place it would have been nice to have the chamber leaders here publicly advocating on behalf of the small businesses with Hispanic women, with folks that can barely make a dollar and make very few dollars every day, advocating for those small businesses that were impacted by the criminal element. I didn't see them. I hope they advocated somewhere but never saw them.

Tony, Member of the Public said I understand there was a proclamation, or an ordinance proposed by the city council based on the last city council meeting to support a ceasefire in Gaza. War is hell, as a Veteran with over 30 years of public dedicated military service and multiple combat deployments including Operation Desert Shield and Storm, Operation Joint Endeavor and Guard, Operation Iraqi Freedom, and Operation Endure Freedom I understand firsthand what it is like to serve in a combat environment. Unless you have experienced war, you have no idea of the hardships, mentally, physically, and emotionally that all involved endured especially service members. But with that said let me remind you of some key statements of why you should not be supported. Today marks a grim milestone for the people of Israel. Over six months since October 7th the one-day holocaust in which so many Israeli people were brutally murdered, raped, burned alive and taken hostage. The worst slaughtered of Israelis since the holocaust in World War II where more than 6 million Jews were slaughter and killed. Let me say that number again, 6 million. Let's not forget the thousands of Israelis that have had to leave their homes in Northern Israel due to the attacks from Hezbollah. With Passover approaching, a holiday of freedom and exodus from Egypt the citizens of Israel are in a dire fight for freedom in their nation and homeland. I expect that most of you have never been to Israel, yet you are proposing supporting the ceasefire. Thanks to the incredible courage and heroism of the brave men and women of their defense forces Israel is fighting back and with God Shloshim they will win. Let's keep in mind who started this war, Hamas, who was designated a terrorist organization by the US and other countries. By supporting a ceasefire, you let Hamas off the hook for the atrocities they committed against Israel on October 7th. If you look who is marginalizing the people of Gaza it is Hamas not Israel. Concerning all the money and resources that Gaza has received over the number of years from the international community it is in the billions, maybe even the trillions and has been squandered supporting Hamas initiatives digging tunnels, paying terrorist and martyrs, buying and smuggling ammunition to attack Israel and enriching themselves as the leadership of Hamas are billionaires who don't even reside in Gaze but instead live in luxury in country of Khutar. Hamas enables Palestinians by suffering, by using them as human shields, stealing aid, and employing hospitals and human facilities such as schools with military capabilities and ignoring the rule of law. Hamas is engaged in a PR campaign to magnify the criticism of Israel by failing to distinguish between civilian and combatants and casualty reports. You need to take with a grain of salt the casualty

numbers being reported by the Gaza Health Ministry as the ministry is controlled by Hamas. The US must signal to the world that it unequivocally defends Israel in its right to ensure that Hamas will no longer be a threat to Israel and all the hostages must be released and anything less will yield more death, hardship, and destruction in the near term and the foreseeable future. So if you are going to advocate for a ceasefire in Israel I would ask that you would include the resolution or proclamation for the release of all the Israeli hostages that were taken by Hamas on October 7th . I would also encourage to condemn Hamas who started this war as well as the PIG, just this weekend Iran launched an unprecedented attacks on Israel with hundreds of drones and missiles and fortunately with the grace of God Israel was able to defend itself and its citizens from the brazen attack. Let me ask you a question, what would you have done if you had been in Israel? This is what Israel, and its citizens are doing on a constant basis with Hamas and Gaza, Hezbollah and Lebanon, the Houthi and Yemen and all of Iran. I would highly encourage you all to support Israel and not support or pass the ceasefire resolution in Gaza. As it is stated in the book of Genesis, those who are blessed shall be blessed and those who curse us shall be cursed.

Diane Starbuck, Member of the Public said I am a member of Animal Advocates for Change. We have been waiting for news on the city's new Animal Welfare Ordinance other than it is being worked on. We have requested a copy, but none has been forthcoming. Dona Ana County has hired a veterinarian and is preparing for a mobile vet unit to go out into the community for spay and neuters. Why is the city so slow to share their support of companion animals and their owners. We are also waiting to hear when community members will be allowed on the board of the Animal Service Center. I encourage Ms. Barbara Bencomo to have the city lawyers write a letter to the state if she has not already done so. Las Cruces has been unable to control its companion animal population resulting in the suffering of abandoned animals and a high kill rate at our shelter. As New Mexico's second largest city it is shameful that the city has not adopted a fully funded phased in mandatory spay and neuter ordinance.

Diane Williams, Member of the Public said I am here on a little bit different vein. I wanted to express my appreciation to our Police Chief, his department. I made a terrible mistake and started to read comments on Facebook, and I am appalled at some of the emotions that are directed towards people who are trying to do their best. The one thing I would like to ask though, I tried to look at crime statistics for the city. It really stops I believe in 2020. There is not any additional at least on the portal, information as far as seeing where out crime rate actually is and where we are going. I have heard that we are going down on the violent crime side which I think is also a trend in the country as a whole and also are there statistics on crimes committed by homeless versus our local thuggery, drug dealers, etcetera, etcetera, etcetera? It seems that anger is really directed towards them, and the real problem is mental health issues and that is throughout the entire country. That and homelessness is a problem in the entire country. It is not unique to Las Cruces. It is not you guys doing a terrible job at what you are doing, it is a complex huge problem that will take a lot of resources and money to fix and then we will have people screaming about their taxes going for the mentally ill. The only other thing and this is a different topic, it is about zoning and not related to what is on the agenda but on the noon news today there was people protesting a zoning change in El Paso and I happen to see their sign and I

would recommend that the city look at the sign they post for zoning ordinances, large, bright green. You can't miss it, big black bold letters. I think that would be a real benefit with all the zoning issues that seem to be occurring.

Susan Cabello, Member of the Public said I am the new Executive Director of Downtown Las Cruces Partnership. You guys have seen me before in my role as of the Director of the Arts and Cultural District, so I am not new to the organization. I am just new to this position. I would like to take a moment to remind you that we are a state and nationally accredited organization that deals with economic development and the TIDD and Arts and Cultural District. We have new leadership as well. Our current Board Chair and Vice Chair are John Munoz and Jeffrey Stewart. John Munoz of Electronic Caregiver and Jeffrey Stewart of the Mesilla Valley Pharmacy. Our leadership is downtown as well. Downtown is growing and thriving. I want to thank you guys and our City liaison Chris Faivre for helping us on our mission to make it better every day. One new business is J&G Watch Repair. They were a kiosk in the mall if you remember that? They are now on the corner of Griggs and Water. So, it is really exciting to see a new business open up that kind of harkens up to the Main Street of old. He does not only watch repair but jewelry repair as well, just a really neat addition to our businesses downtown. When speaking with our businesses, I have talked to at least 20 businesses a month. Many of them have said that they really appreciate the security services provided by the TIDD and they would ask that those services be expanded, if possible, in the next fiscal year and finally I am going to leave my business cards with Christine, the City Clerk. I would encourage you without violating rolling quorum to contact me if you would like to learn more about downtown. I would be so happy to talk, to give you a walking or driving tour of our district and introduce you to any of our merchants that you would like to interact with.

Judy Berryman, Member of the Public said I am the current chair of the Historic Preservation Commission. I am speaking in regard to the pending demolition of multiple historic structures at the northwest corner of University and Chaparral. We are again losing a part of Las Cruces cultural history and I believe there has been no formal documentation to protect any remaining evidence. Although the proposed demolition is well within the requirements set under Chapter 40, Historic Preservation Ordinance, under Chapter 2, under the Historic Preservation Ordinance and Planning and Zoning, my question is, why can't we address demolition of historic buildings even if they are not in the Historic District prior to that act? My second question would be, is there any federal or state money involved in this endeavor? If there is, we are in violation of both those laws that protect historic resources. The opportunity that I see is that we have the opportunity to address this issue. The HPC is interested along with community members, city staff, and the construction industry that we can come together and create a diversified working group that can offer guidance on development rather than addressing it after the buildings have gone down. Why design such a group that would be transformative and would allow all of us to move beyond the current process. This would facilitate constructive and practical solutions. I propose the following, a Work Session regarding the property on University and Chaparral that would include city staff, the proposed developer/property owner, along with any members of the community. The goal would be to exchange ideas, share perspectives, and provide an opportunity to voice our opinion. The second ask would be to allow the Historic Preservation Specialist or Historian to actually document the

buildings before they are demolished. If we cannot save the buildings, we will at least have the history of the building. The goal would be to have a professional record to be filed with the New Mexico State University archives and special collections for any future research and finally a separate meeting with the property owners to discuss potential changes. I understand that a number of issues are going on, but I would like to ask that the HPC is not informed of demolition of historic buildings by driving by and seeing a bulldozer in front of the building. I would like to have prior information and consultation.

Eddie Thomas, Member of the Public said Mayor Enriquez allow me to begin by saying that hiring an outside third party auditing firm to advise you on the City Council Meeting procedure is not only a waste of taxpayer's money and totally unnecessary but is also a thinly veiled see through attempt to avert blame from moving the public input portion to the back of the meeting agenda in an attempt to escape public scrutiny for the policies proposed by this council. This is already something you signaled your true intentions on. This move would make it prohibitively inconvenient for most of the people that bravely come down to speak to you and the council members. May I respectfully remind you that you are all public servants, accountable to us, the taxpaying, salary paying citizens of Las Cruces and as such you should be accommodating us. To do otherwise would interfere with the democratic process afforded by the Constitution for the redress of grievances. One such policy is the proposed rezoning ordinance that would increase crime while decreasing property values. This proposal if enacted would increase neighborhood traffic and noise and destroy the peace and quiet we have come to enjoy. It is why so many of us moved here. I don't want to live in a congested cannabis community. We already have enough of them on every corner and shopping strip mall. We like single family neighborhoods that promote family life. We like the space and serenity that our current zoning structure affords. I have spent thousands of dollars fixing up my house. I have done my part to stimulate the local economy. So, is this how you are going to reward me and other homeowners that have investing in improving the appearance and adding to the neighborhood appeal? What possible purpose could this serve? Surely it is not in the taxpaying homeowner's interest. Instead, why aren't you doing something about the city's more pressing problems like crime, gang violence, drug abuse, and the homeless? Instead of building more low-income housing at the taxpayer's expense. Why don't you focus on attracting high paying jobs that can contribute to the tax base rather than draining it. We already have one Desert Hope with another one on the way called Amador Crossing. When that one gets full are we going to build another one and what are we going to name it?

4. READ CLOSED MEETING STATEMENT

4.1 READ APRIL 8, 2024 CLOSED MEETING STATEMENT INTO THE RECORD.

The Las Cruces City Council met in Closed Session and only discussed those limited items as stated in the posted notice to discuss limited personnel matters regarding Municipal Judge II, which is closed pursuant to NMSA 1978, Section 10-15-1H(2).

5. ACCEPTANCE OF AGENDA

Councilor Johana Bencomo moved, seconded by Councilor Becky Corran, to accept the agenda as presented.

RESULT:	**Carried**
MOVER:	Councilor Johana Bencomo
SECONDER:	Councilor Becky Corran
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

6. CITY COUNCIL MINUTES

6.1 WORK SESSION OF MARCH 11, 2024.

6.2 REGULAR CITY COUNCIL MEETING OF MARCH 18, 2024.

6.3 WORK SESSION OF MARCH 25, 2024.

7. RESOLUTION(S) AND/OR ORDINANCE(S) FOR CONSENT AGENDA

7.1 RESOLUTION NO. 24-102: A RESOLUTION APPROVING AN AMENDMENT TO THE CITY OF LAS CRUCES (CITY) TO ACCEPT THIRD QUARTER BUDGET ADJUSTMENTS FOR VARIOUS CITY DEPARTMENTS THROUGH AN AMENDMENT TO THE CITY'S ADOPTED FY2023-2024 BUDGET, AND THE FY2024 CAPITAL IMPROVEMENT PLAN (CIP).

8. OLD BUSINESS

8.1 COUNCIL BILL NO. 24-023; ORDINANCE NO. 3065: AN ORDINANCE APPROVING A ZONE CHANGE FROM R-4C (MULTI-DWELLING HIGH DENSITY & LIMITED RETAIL AND OFFICE-CONDITIONAL) TO R-4 (MULTI-DWELLING HIGH DENSITY LIMITED RETAIL AND OFFICE) FOR PROPERTY ENCOMPASSING 2.908 + ACRES AND LOCATED AT 712 AND 722 HENDEE PLACE AND 725 BASHA ARCH. SUBMITTED BY M&M BUILDING SOLUTIONS, REPRESENTATIVE. (23ZO0500143).

David Weir, Deputy Director Community Development gave the overhead presentation.

Councilor Flores said you sent us all an email as far as the TIA and other details. The TIA was done several years ago and I am sure that traffic conditions have changed as a result even though I believe you said that maybe it didn't. I have several concerns about the change and there are no assurances anywhere that they will not proceed with a three-story structure anywhere and I don't know the TIA that was conducted several years ago I haven't seen it. I don't know what it took into account. I don't think anybody has seen it up here. Maybe I am the only one who hasn't. I don't think the public has seen it. I don't think the people who actually live there because there were several emails that I was cc'd on, and I think my colleagues were also. I think one of the problems I have here or the issue at hand for me is that it is almost like a bait and switch. It was presented as two-story structure, or it would be higher and now they have come back, and I think that the concerns that have been spoken, presented to

us here pretty much substantiate concern for over development. It was interesting how the developer said that well we need housing. Yes, we need housing, the operative word in that, the adjective would be affordable housing. In their language the rates would be market prices or market rates so it's not really alleviating the need for affordable housing or for housing for people who would otherwise have it. So, the study that was done specifically stated that the capacity was 15,000 I guess motor vehicles going back and forth but I think our population has grown in last few years and I don't think that it would be that low at this point and I think the TIA comes in after they have been approved or what is the process there? When is the TIA conducted, after it has been approved or before it's been approved?

David Weir said the TIA was approved as part of the construction drawings for the subdivision and the TIA basically explains the existing conditions and if there is any additional improvements that need to be made to the roadways of that time. The 15,000 content is major collector streets. That is what they are designed to, the maximum capacity, I don't know the particular numbers of the TIA but the existing traffic flows and the build out of the development are below that 1,500 traffic count. Some of the other comments that you have made, I think those are questions that the applicant could provide to you about their intent for the property, why they came forward at this time, and could also provide details on the TIA since they are the ones that commission that and the development of the subdivision.

Councilor Flores said it would be wonderful for his intent to be in writing because he can say with all due respect what is convenient at this time and renege at any time. So really unless he is under oath or something I wouldn't take his word for it, with all due respect.

Troy Mitchell, Applicant said one thing I do want to make clear, one of the 100 sheets that came in the TIA. The TIA was done on 64 single family lots and a maximum density for the R-4 zoning and it shows, it projects like a 2031 year fully built projection for the Boutz and Stern subdivision intersections. It shows of the max capacity. Those are around 20% or less.

Councilor Bencomo asked if granted the second story, the removal of that, do you have any idea how many units you would plan to build?

Troy Mitchell said yes, we would only go two story because as precedence we saw that was allowed in the subdivision so that is why kind of why we are requesting this. Our units that we have on our conceptual are 23.

Councilor Bencomo asked two weeks ago there was conversation about putting restriction of 35 feet, is that something you are comfortable with?

Troy Mitchell said yes, that would match with the subdivision as it is being built, the single-family homes and we can get our two story in a 35.

Councilor Bencomo asked for the 23 units you would expect to have two cars per apartment or what were you thinking in terms of parking lot?

Troy Mitchell said for the parking we are required to do 1.5 per unit and so we will have some bike racks because it is accessible to the university, that would be the plan.

Councilor Bencomo said I did want to note something about because I have also had some emails about well this wouldn't even help the housing crisis anyway because they are not affordable apartments, but I do want to say that all housing helps the housing crisis. MFA reports that there are 10 high end renters to every one unit in Las Cruces so then folks rent down taking up units for folks who cannot afford higher rent units. There is also a market report that says the city would need a minimum of 236 lots to come online in order to keep up with population increase. Here is where I am coming from with everyone. Number one, naming that traffic calming is a huge priority for me for Boutz, for McClure, for Hoagland, for Elks, for many streets in Las Cruces. It is a huge problem and it's a huge priority for me in making sure that it is a huge priority for the council and Public Works. So, I just want to point that out. The second thing is that you know when we talk about building apartment complexes. The city and certainly myself are trying to ask developers to do their part so that the city doesn't just rely on nonprofit developers. We want these private developers to build in the infill, to not just build out in the East Mesa, to build more apartments, multifamily units, missing middle units and then when they come to us we make it incredibly difficult. These are the balance that I am keeping as an elected official. Certainly, for this part of the area, but really all parts. It does not matter where proposals for apartments, whether it is Boutz, whether its McClure, whether its Sonoma Ranch, it is always a problem for residents in the area where they are talking about apartments. This will be my fifth year. Every time there has been a zoning request for apartments there has always been an issue for residents. It doesn't matter what the issue is. I also do want you to note the heaviness of that when we are also facing as a city a giant housing crisis, 5,600 rental units are short in the city of Las Cruces. Twenty-three won't fix it but I want to work with developers who are coming to the table and are saying we want to do this, and we want to do it in good faith and so now my invitation now to you, are you the developer or the owner? For you to also be a good neighbor. I think one of the biggest issues that I have heard in this neighborhood is the irrigation ditch. That it hasn't been cleaned. There is neighbors in the area that have had to go and clean it themselves and so just some of those little pieces right then my invitation to you is to come into this neighborhood and in good faith operate so that folks are able to talk with you about some of the feedback that they have.

Troy Mitchell said sorry I was not the subdivider of the original land. I am just these three parcels.

Councilor Bencomo said I see you are only the parcels on the end.

Troy Mitchell said I think you brought up a good point. I think economies of scale really plays into this. The intent to try to reduce the apartment rental cost is directly correlated with the cost to build the structures and so if we can build more units on a parcel, it reduces the cost and drives the cost of rentals down and that is kind of our intent in this as well as the single-family housing being allowed to go two stories as

well.

Councilor Bencomo said I think that also what this has taught me is that and I can talk about it during my council comments but I think and as Realize comes to life the need for inclusionary zoning and the need for providing density bonuses for developers who want to build more multifamily housing and you know I would love to in the future ask someone like you, will you save 20% of those apartments you are building to be affordable housing apartments. So that is my note for everybody that I am hoping this is something we can get done in the future. I think for today unfortunately that might not be able to happen but that is at least where I am coming from. I guess I will continue my advocacy for the ditch elsewhere David because I think that it is a real issue and it's a huge issue and we have to fix it and I am sorry that is not on you.

Troy Mitchell said I do want everyone to know that this is locally funded. It is not some big out of town developer. That is really something that we wanted to push so I am trying to keep it local. I need to clarify, David just told me. We wouldn't hitting our max R-4 density. I apologize, it is 23. The conceptual we have is 23 per lot so there is three lots total. They are just over one acre and two of them just under one acre.

Councilor Mattiace asked on the previous agreement that was made with Ken Miyagishima and the homeowners or the stakeholders, it was to be a one story?

David Weir said the structure would be one story but there was no cap on the number of units that could be built on each individual lot.

Councilor Mattiace asked how many total units, 23 times 3?

David Weir said yes, that would be 69 units. The maximum density for that would be approximately 113/116 units I believe. I did the math once, but it was over 110 but less than 120.

Councilor Mattiace said it is important for me to recognize that a lot of the stakeholders, homeowners, and people that have moved into that subdivision halfway depended on that first agreement or some of those homebuyers that maybe we aren't hearing from they purchased that $600,000/$800,000 home thinking that it was going to be the first agreement, you know one story. It still may be 50 people, 60 people but the stakeholders agreed to that it wouldn't be capped, correct?

David Weir said using stories as a standard is rather difficult for staff because there is variable in it. A height and feet is much easier to deal with and as we in the Community Development Department analysis the 35 feet is the same at the single family homes. New ones would be allowed to be built too and those are between existing neighborhoods and these projects. Again, just some information for council to consider.

Councilor Mattiace asked in your engineering knowledge and basis if it was one story what would be the number of residents?

David Weir said I couldn't answer that because until you put the square footage of the units that you are going to provide there are a lot of different design criteria that could go into that.

Troy Mitchell said I don't know that specific answer. I know that each lot is a different size and shape so yes, our conceptual for the first lot is 23. On other lots I don't believe we will be able to fit that amount. If we went single story it depends on the size per unit. If we went one bedroom, we could be able to fit the same amount if they are like 500 square feet potentially. We are trying to make them a little bigger than that. Our conceptual are two bedroom and three bedrooms.

Councilor Mattiace said assessment wise and value wise you probably wouldn't build a 500-foot property next to an $800,000 home.

Troy Mitchell said no that is what we don't want.

Mike Bevs, Member of the Public said I am understanding that they want to put instead of two-story apartments, four story. I don't know if that is true or not. We have been dancing around that song since they got here. I can tell you this. I had my home built 37 years ago by John Curry. Every piece of property he has was either has a French drain, huge, this tall full of river rock. Occasionally we get standing water and these people it's about money. These people didn't put a French drain on the back corner of that property, there is a pit half as big as this room where all the water from that is supposed to run down into this place and sit. I haven't figured out who is going to build a house next to that mosquito pit. I have been to the back two houses that Red Cliff built. I talked to a little girl that is sitting there. They are $340 apiece and they are the smallest ones on the property. The property that they built across the street on Boutz, there are no sidewalks whatsoever. You dump that many people into that small an area you are all going to have a dog or two and how in the world do you get parking for 1.5 people? I see a lot of song and dance here. This is pretty cut and dry. The last city council approved something and the whole bump has nothing to do with housing for the poor or any of that. It has to do with money. If you don't understand anything in this country go back to the money. We agreed and the whole group kind of went for the first agenda, but the council sat down and they are back for what's called a bump in the car business.

Patricia Nevue, Member of the Public said I live on Marilissa Lane. We have no sidewalks. Our children stand next to the street to catch the school bus. My issue was traffic. I know one member of the city council told one of the other neighbors they would come and look at the situation. We have no shoulders. We have a dirt strip where people have put in traffic lights. We have had traffic lights put in. That means that you can't walk down that dirt strip you must then walk into the street. Our children get off the school but and where are they going to walk. People don't drive 25 miles an hour. I have heard it said that this is an arterial roadway, that it is a straight going in and out of the city with two lanes and no shoulders. Where are people supposed to walk? I am concerned with traffic that by adding the apartments we are adding more traffic, and it means that it is unsafe for our children who have no sidewalks to walk. For people who are going into Old Mesilla, they drive 35/30 miles an hour, I realize

that is a personal issue for those people, but we just want our children to be safe. We want to walk down our streets and there is nowhere to walk. Please drive by our neighborhood. You will see what I am talking about. Building the apartments is great, we need that kind of housing. We just don't need the traffic.

Joe LaRocque, Member of Public said I live on Marilissa also. We have already mentioned that the original zoning was a compromise between what the residents wanted, and the subdivision developer wanted, and he wanted like six houses per lot and all of this stuff, and they changed all that and he wanted the two story apartments. The Mayor at the time and the city council agreed that that was stressing the neighborhood too much, the six lots per acre and all the rest of it. At the same time that all of this was going on it was brought up in city council that Boutz is an arterial collector street, that it does not meet any of the definitions of a collector street that are set by regulation. It was designated that because it comes from Mesilla to Las Cruces, and it doesn't meet the standards to be that but it is designated that so that is what the TIA said it was. My main objective to the whole thing is that I think this is just trying to do an inrun around what was originally agreed on and I don't think that is appropriate and I don't think the city council should allow it.

Diane Williams, Member of the Public said I hear reference to traffic calming and I wonder how you calm traffic on a two-lane road where you are adding over 100 with the houses and the apartments vehicles just them alone will be using that road as well as people that come visit. When you have two lanes crumbling little asphalt shoulder, I believe it is 8 inches on one side and maybe a foot/foot and half on the other side and then you have people's walls, people's driveways. Are you going to take over people's properties? There is no place to put in sidewalks and curbs and so what do we do, just wait for a kid to get hit? If I have to dodge around garbage cans or light poles while I am walking, I am walking sideways on a drainage ditch. How do you calm traffic in that situation? Please consider that, thank you.

Henry Wilson, Member of the Public said Marilissa Lane. I don't know how we got up to this point after 4 years of discussing that project and still don't know the number of apartments that were planned, are planned, or want to be planned. I heard 63/64, I don't know. After four years they are still not sure the number of apartments, sounds like something is trying to be changed to call it something else.

Raymond Bernstein Jr., Member of the Public said I am part of the housing area, and I was very involved in the original request for keeping things down. I am going to be very, very brief. Most of the things that I wanted to say today have been said. There is one thing though I would like specifically the council to take note of. We have a practice, it is institutionalized the way we do business in the city, we have the developer do the TIA. Who in the world is going to get a developer to fund a TIA that is not going to suit their purpose. It is like the fox with the hen house. They are always going to say that things are great and what was said about the size of the roads, and I took pictures the first time around. The roads are radically smaller than the template in the specification for the arterial routes. So, I would ask you to strongly consider rejecting this proposal.

Robert McCorkle, Member of the Public said I live at 1130 Marilissa Lane and I spoke to you last time. Some of the questions that we are finally getting answers to were prompted by an email I sent to every councilor and the Mayor. Looks like they are trying to pull the old bait and switch on us here and I don't appreciate it and it disturbs me that Mr. Weir says we can come back in a year, and we can do some more amendments to it. No, that's it. You had your chance, you made a promise to us. You are in the process of maybe breaking that promise and I'll agree we need more housing. There is no question, Councilor Bencomo but let's make sure it is the right housing that will serve the most people who need it. This doesn't seem like affordable housing to me. The average rent in this city depending on what website you look at, $800 to $1,000 for a single 500 square feet, whatever it might be. There is going to be students, it is not far from NMSU. You know as well as I do that is not just going to be one student in that apartment it is going to be two, three, or four, all of them probably have their own vehicle. We are talking of adding who knows how many more vehicles, 1,000 over time and the TIA is four years old. The city of Las Cruces has grown by about 4,000 people since then. A lot of them use Boutz to go to Mesilla and that is going to increase that traffic coming through there. The bigger problem I think is going to be at El Paseo and Boutz because it is going to stack up there. It already does so I urge you to vote this down it's not time and it's not the place.

Mayor Enriquez asked so this was agreed upon four years ago and after a denial of one year then they can come back and make some changes but in that time, there hasn't been any other changes, correct?

David Weir said there has been no other request to change the zoning since 2020.

Mayor Enriquez asked and everything that was agreed upon at that time has been adhered to?

David Weir said correct.

Councilor Bencomo said I want to make the amendment on 35 feet just to end the misinformation around four feet, four story apartment complex and those kinds of things. Is that something that staff would recommend?

David Weir said yes, staff would be comfortable with a recommendation of 35 feet. That is what the maximum height is for the adjacent properties that are with the R-1 zoning.
Councilor Bencomo said I would like to now make a motion to amend this to include a 35-foot height limit. Mr. Weir can you please talk about 35 feet and what that means?

David Weir said 35 feet is from the ground floor of where the dirt is to the maximum peak of the structure. That is not an arbitrary number. Stories can vary from 10 to 20 feet in height, so it is an exact number. The neighborhood knows, city staff knows what they are getting with 35 feet.

Councilor Bencomo asked realistically in 35 feet could you build three floors?

David Weir said it would probably be difficult to do that. Twelve feet is where you have your floor, your mechanicals where you have your air ducts for your heating and cooling and running your mechanicals and then you would have another floor on that if it were the same in between floor and then you would only have nine feet left which would be rather difficult. You could not get another 12-foot story in.

Councilor Bencomo asked what if I say 30 instead of 35? You're saying that 35 is not an arbitrary number is what you said?

David Weir said the reason that staff provides that number is because that is what the single-family homes adjacent to the lot are allowed already so you are not allowing a height greater than what the adjacent zoning has.

Joe LaRocque said I am not talking about what we did before, this is about the amendment and I think if you take a show of hands of the people from our neighborhood we are not concerned with 20 feet or 35 feet or whatever we were concerned with one story or two stories and how that effects the traffic that the apartment complex will create and 35 foot two story is basically giving them exactly what they want and I am saying we want one story to restrict the traffic instead of doubling the number of apartments. So, I don't think the foot has anything to do with whether it is one story or two story.

Councilor McClure asked perhaps David Sedillo could speak a little bit to traffic calming? I know that they were working on collector and arterial calming. I know that there is a way of slowing traffic down manually and what would that look like for Boutz and what would that look like for Stern?

David Sedillo, Public Works Director said you are correct Public Works is working on a traffic calming mitigation policy for both arterials and collectors. As far as what can be done on Boutz and Stern, those are going to be site specific and based on many things as we go through so we will take a look at what those items are and see which applications will work best based on configuration, existing conditions, traffic itself because again some of these streets are not comparable. Some are built out and some are not so it would take all of those items into consideration.

Councilor McClure asked just kind of give some examples of what does that look like when we say traffic calming and I know that it varies depending on the road and the conditions and the amount of people but what are some ideas so that people can walk away and say these are some ideas of what might happen in the future when we do integrate more housing in this area.

David Sedillo said some things that can be done are narrowing of travel lanes. Those are an option again depending on the number of lanes that are out there, what the traffic is doing there. That is one way to look at it. In residential streets we do have speed tables although these roadways are classified with a little bit higher speeds, we would really not recommend those types of things. Again, look at different ways of how to slow traffic, we could do planting of trees, there are other factors that we can install in the right-of-way that we have available to us to do that.

Councilor Flores said I know there is a lot of development in District 6 and every time something is built my understanding is that the developer or the builder or someone is responsible for putting in the drainage, the sidewalks, that sort of stuff. Would that be happening with this new development?

David Weir said the developer of the Banmor Subdivision and any outstanding public improvements with these three lots when they came in would be responsible for putting that infrastructure in. The sidewalks along Stern and Boutz are already in place. They were built with the initial single-family zoning. All the roads are paved. The individual lots interior of the subdivision will be built with the construction of each individual lots. So, the internal sidewalk system will be built out when all the homes are built, and apartments are placed on these three lots.

Councilor Flores asked why is that we have a woman who came up to speak, I think a couple of times now at least that there aren't any sidewalks, that children have to cross those streets and I know, and I have been down that street several times and it always looks very rural to me. It looks very undeveloped, but you are saying that there are sidewalks there, where exactly would that be?

David Weir said the Banmor Subdivision was built under the time when all sidewalks were required, and they have done that. The residential areas to the west do not have any sidewalks in front of their lots. Evidently at the time that was built it was either outside of the city limits and they weren't required or when they were approved by the city or there was some type of waiver for those so those are existing development that took place prior to the sidewalk requirements being mitted. Those lots are a little bit larger. There are certain conditions that sidewalks aren't required in a residential development but those have been all the rights-of-way and streets have been within the city system and our responsibility for some time.

Councilor Flores asked so those units if they are built if its approved will have a sidewalk?

David Weir said yes.

Councilor Flores asked so you would have a patch of sidewalk?

David Weir said yes.

Councilor Becky Corran moved, seconded by Councilor Becki Graham, to remove Ordinance No. 3065 from the table for discussion.

RESULT:	**Carried**
MOVER:	Councilor Becky Corran
SECONDER:	Councilor Becki Graham
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

Councilor Johana Bencomo moved, seconded by Councilor Becky Corran, to amend Ordinance 3065 to add the 35-foot height limit.

RESULT:	**Carried**
MOVER:	Councilor Johana Bencomo
SECONDER:	Councilor Becky Corran
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor Becki Graham, Councilor Johana Bencomo, and Councilor Becky Corran
NAYS:	Councilor William Mattiace and Councilor Yvonne Flores

Councilor Becki Graham moved, seconded by Councilor Becky Corran, to Approve Ordinance No. 3065 as amended.

RESULT:	**Carried**
MOVER:	Councilor Becki Graham
SECONDER:	Councilor Becky Corran
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor Becki Graham, Councilor Johana Bencomo, and Councilor Becky Corran
NAYS:	Councilor William Mattiace and Councilor Yvonne Flores

9. RESOLUTION(S) AND/OR ORDINANCE(S) FOR DISCUSSION

9.1 COUNCIL BILL NO. 24-024; ORDINANCE NO. 3066: AN ORDINANCE CONFIRMING THE SUCCESSFUL COMPLETION OF THE LOCAL ECONOMIC DEVELOPMENT ACT (LEDA) PROJECT WITH X2NSAT, INC., AND AUTHORIZING ITS TERMINATION, TO INCLUDE THE PROJECT PARTICIPATION AGREEMENT, INTERGOVERNMENTAL AGREEMENT AND THE RELEASE OF THE $150,000 GUARANTY THAT HAS SERVED AS SECURITY FOR THE PROJECT.

Elizabeth Teeters, Director Community Development gave the overhead presentation.

Councilor Corran said I just wanted to follow up and say this super interesting especially given that and on our agenda that we also had another LEDA project that was approved in the consent agenda. It is cool to see that we have we had our return on our investment sooner than the state did. Can you just tell me what the dynamics of that are? Is that typical? Do we get paid first and how does that work? And can you tell me what the average time to return on investment in most LEDA's is, approximately?

Louise Marquez, New Mexico Economic Development said what I can tell you is that there is no such thing as an average simply because every project is going to be a different size. What I can say is because the city's investment was $150,000 and the states investment was $300,000 as money returns it is easier to reach $150,000 on return on investment. I would also like to congratulate city council because it is a pretty exciting time when you get to where you have completed the actual project, and you are seeing the benefits of it.

Councilor Becki Graham moved, seconded by Councilor Johana Bencomo, to Approve Ordinance No. 3066.

RESULT:	**Carried**
MOVER:	Councilor Becki Graham
SECONDER:	Councilor Johana Bencomo
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky

	Corran, and Councilor Yvonne Flores

10. BOARD APPOINTMENTS

10.1 PATRICIA GALLEGOS

Councilor Mattiace appoints Patrica Gallegos to the Library Board.

10.2 MARNIE NIXON

Councilor Becky Corran moved, seconded by Councilor Becki Graham, to reappoint Marnie to the Health and Human Services Advisory Committee.

RESULT:	**Carried**
MOVER:	Councilor Becky Corran
SECONDER:	Councilor Becki Graham
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

10.3 TED LINNERT

Councilor Becky Corran moved, seconded by Councilor William Mattiace, to reappoint to the Airport Advisory Board.

RESULT:	**Carried**
MOVER:	Councilor Becky Corran
SECONDER:	Councilor William Mattiace
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

10.4 MIRCHAEL RADKE

Councilor Yvonne Flores moved, seconded by Councilor Johana Bencomo, to reappoint Michael Radke to the Airport Advisory Board.

RESULT:	**Carried**
MOVER:	Councilor Yvonne Flores
SECONDER:	Councilor Johana Bencomo
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

10.5 STEPHANIE HAWKINS

Councilor Becki Graham moved, seconded by Councilor Becky Corran, to appoint Stephanie Hawkins to the Lodger's Tax Advisory Board.

RESULT:	**Carried**
MOVER:	Councilor Becki Graham
SECONDER:	Councilor Becky Corran
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

10.6 KEVIN VAL PEREZ

Councilor Yvonne Flores moved, seconded by Councilor Johana Bencomo, to appoint Kevin Val Perez to the Lodger's Tax Advisory Board.

RESULT:	**Carried**

MOVER:	Councilor Yvonne Flores
SECONDER:	Councilor Johana Bencomo
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

10.7 TROY MITCHELL

Councilor Yvonne Flores moved, seconded by Councilor Becki Graham, to appoint Troy Mitchell to the Capital Improvement Advisory Committee.

RESULT:	**Carried**
MOVER:	Councilor Yvonne Flores
SECONDER:	Councilor Becki Graham
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

11. NOTICE OF PROPOSED ORDINANCE(S)

1) There will be no public discussion.

2) A Councilor may ask staff for clarification on the proposed ordinance(s).

11.1 COUNCIL BILL NO. 24-025; ORDINANCE NO. 3067: AN ORDINANCE AMENDING ORDINANCE NO. 3054, UPDATING THE PROJECT PARTICIPATION AGREEMENT BETWEEN THE CITY AND 828 PRODUCTIONS, LLC., TO ADD CLARIFYING LANGUAGE FOR THE USE OF THE $2,800,000 IN LOCAL ECONOMIC DEVELOPMENT ACT (LEDA) FUNDS DEDICATED TO THE RENOVATIONS OF MULTIPLE FACILITIES.

Council agreed to bring it forward.

12. CITY COUNCIL MEMBER BOARD REPORTS AND COMMENT

12.1 COUNCILOR MCCLURE

I was pretty conflicted about the ordinance that we approved. I think the clarity was a little hard for them to understand but I think Mayor Pro Tem Bencomo's explanation is partially how I feel as well, and I also think that ask is going to be especially once we look at Realize be innovative with our developments and rethinking how we actually build and how we can be good neighbors is going to be crucial. For example, if we don't want to have a community built that has any parking at all and it becomes a cycling only and they know that when they move in. Those are novel ideas that are working in other areas especially if we consider infill in at least in District 1 specifically. I was conflicted and I wish we would have talked a little bit more on how to relay some of their concerns in terms of traffic because as I think what the crux is that people worry about traffic not necessarily about people even though I know sometimes I get conflicted when I hear ugh, the apartment dwellers. I was an apartment dweller for ten years and I was also very interested in my city so I wonder about that, and I think it is a strange narrative to have because not everyone wants to live in a single-family home or can frankly.

12.2 COUNCILOR MATTIACE

None.

12.3 COUNCILOR GRAHAM

I just want to give a quick thanks to Justin Garcia with the Las Cruces Bulletin. A story that he worked on recently posted a couple of hours ago entitled, Public Officials Grapple with Threats Raising Questions about Local Democracy. Covering some disturbing yet definitely needing to be covered issues about these kind of threats. Justin looked, he brought in some of the national statistics but also looked at the state and local level and I was pleased to participate in the story. Shoutout as always to local journalism and give it a look.

12.4 COUNCILOR CORRAN

I wanted to give a few quick notes and shoutouts but also to the question earlier I also think Mayor Pro Tem Bencomo's thinking about this really speaks to it but I would also say as we continue this conversation with Realize there is a lot of fearmongering happening about what your neighborhoods are going to look like and I just want to say when you come to us about folks who live in apartments or folks who like me live in a townhouse down the street from an apartment in a vibrant beautiful neighborhood that I wouldn't give up for anything and truly love realize that the folks you are talking to might actually live in the types of space that we are talking about increase density and I will encourage anyone who is sort of thinking critically about Realize to consider both the housing situation that we exist in and the environmental situation that we live in and understanding that denser housing is better for the environment and know that we are also working on the traffic calming discussions very briefly and we have been having those discussions and I have a list of the streets in my district and folks are crying out for traffic calming. We can't do all of those things at the same time, address the sustainability, address the housing crisis, address safety in our neighborhoods meaningfully and also just as a note, don't let internet fearmongering and misinformation dully inform of what you perceive of reforms of zoning that really give homeowners a lot more power to build granny flats and other things amongst many things that are a part of that but please know that when you are yelling about duplexes you are talking to someone who lives in one so what you say subsequently might be viewed with some skepticism from my part although I can understand why you might not want me in your neighborhood.

I do want to give a couple of shoutouts of experiences this week. I planted a tree in my front yard, and this is not a story necessarily about planting a tree but by the way I got it on what I call is the death row of plants at one of the big stores. First, I called before I dug, I want to give a shoutout to this infrastructure. Two notes, one you don't have to actually call for people like me who hate talking on the phone you can do this online, you can request someone to come and put the markers where the things that are in the ground, utilities in particular that you shouldn't dig into and again many people don't think this applies to them because maybe you don't dig holes so deep but in fact in my case I did. The hole was that deep and I had called and there were markers, and I did not cause a gas explosion in my neighborhood. You can call 811 or do it online if anyone hates talking on the phone and the City of Las Cruces, Darrell in particular, thank you to Las Cruces Utilities Darrell who came out and marked the water and gas in my front yard and Century Link and Xfinity joined in, and El Paso Electric joined in on that but I also wanted to give a shoutout to Darrell who did that in particular in the city.

I want to also mention that I met with Marshall Martinez the Executive Director of Equality New Mexico about the City of Las Cruces and Mayor Pro Tem Bencomo and City Manager Taumoepeau was there and we were talking about the Municipal League Quality Index of Las Cruces which I mentioned before but I really want to highlight this because they came into this meeting with Gail Estell who is the City's ADA Coordinator but who also works on our Municipal Quality Index and since she has been working at the city we started out with score of 47 and our score is now 89 out of 100 so special shoutout to Gail who has been working extraordinarily diligently on this during her time at the city and I am really proud of the work that she has done and the work that the city has done to think about this score card and I appreciate Marshall and EQNM for giving us some food for thought to move forward so thanks to everyone who came to that and it holds an exciting future.

I serve on the board of the Roadrunner Food Bank and I think that they are looking at expanding their operations in Las Cruces and so this week I will be meeting with those folks on how they will be supporting their local food banks and to the community to the south and the southern part of the district and also partnering with manufacturers in particular in Juarez to build a local supply of food that can be distributed to folks who need it. So, I am very excited about the potential expansion and growth of Roadrunner Food Bank here in southern New Mexico.

12.5 COUNCILOR FLORES

The City Art Board is going to be participating in the Mira event on April 27th,it's going to be at the Plaza and again this is the second annual Chalk the Plaza. It invites all artists who want to proceed with the plan. The theme is Postcards from Las Cruces which I understand to be things that are very Las Cruces. Everyone is invited to participate.

12.6 COUNCILOR BENCOMO

Thank you, Councilor Graham, for the shoutout to the Bulletin for the article by Justin Garcia. I also participated in that article and I made public comment about it on my social media but I wanted to here from the dais publicly thank Ikani, Chief Story, and Detective Wilbur for the way that they handled my situation and for taking it so seriously, especially Detective Wilbur for being such an advocate for when I didn't know what to do so I just really wanted to thank you all for holding space for my fear and anxious rants at times because it was a very hard situation. So, thank you very much.

I also want to thank Community of Hope, Nicole Martinez and her staff for hosting a meeting last week with some of the neighboring small businesses of Community of Hope and soon to be Amador Crossings Housing Project and Natalie was there as well and I just want to thank everyone who came for engaging in that meaningful conversation and for continuing to engage in that conversation and an additional shoutout to Dr. Schumacher who has experienced significant amount of grief in her location. It doesn't go unnoticed and very much seen, but additionally she hosted a free vet clinic there at Community of Hope where people came in and brought their pets and she took care of them and it was really beautiful and I think it is such an

important bridge building practice for us to have these kinds of conversations and engagements beyond the three minute podium talks here and so I really just want to thank everybody.

I had two district open houses, and I can't thank Catrina and Grace for all of the work that they did to put them together. I don't know if this is public yet, but we are losing Grace back to the LCPD. Grace you are wonderful, and you have been wonderful in this office, and I am excited that you will continue the work. But Catrina and Grace helped tremendously with setting this up. I wanted to just thank some people who just specifically came because the model that we did involve a lot more staff than it usually does and they came twice and stayed two hours and talked to so many community members in District 4 who had real concerns, who had questions and they were all there to answer them graciously. A ton of city staff, we have Animal Control, Gino Jimenez came to both meetings. Economic Development staff also came to both meetings, Chris, Celina, and Blaire. LCPD Codes, Officer Roach and Officer Ellis. Partners like NMDOT were there as well. Our Project LIGHT Team #1 was there and even as they were getting calls, they were in and out. Public Works, David Sedillo was the only one there the first meeting and I want to note that so if Tony is hearing we can guilt him a little bit because David had the longest line ever. Partners like Mesilla Valley Community of Hope were there for both meetings as well as Legal Aid who you had met here today. We had our LCPD Community Advocates, David, Charlie Velasco, Belina, and Alicia and then this last meeting a couple of members from the School Board also came. School Board members Nolan and Tenorio and then of course we had Utilities Adrienne Widmer who came to the second one and then Community Development who also came to our second one as we were adjusting from the first one. So, there was a ton of folks and I just want to express my sincerest gratitude to everybody.

Really quickly I did mention earlier that I Mayor and Ikani, I would love for us to talk with Community Development about inclusionary zoning unless that is something that is in Realize. I don't know if it is, but I think it is important to talk about having a tool for us to be able to offer developers a density bonus with a commitment that they save some of those apartment units that they make them affordable housing units. It feels like a really important tool for private/public partnerships to continue as we build apartments and multifamily dwellings within the infill.

The last thing I wanted to talk about, I know we contract with a third party with security for the downtown and sometimes for our partners like at Community of Hope or at least hope to provide that service for them in the near future but I am hoping that in that contract we can request additional training for those security guards who are in fact very much at the forefront of navigating with folks who may have mental illness, folks who may have substance use issues and may not have the training to sort of deal and have those appropriate conversations with folks. You know my step daughter was dog sitting and she was walking a dog in the downtown plaza and one of the security guards barked at her and so I just want that if we are contracting with these folks that they are providing important and good customer service and I am hoping that we can talk about how we can build into that contract like mental health first aid training or things like that that I think are an important piece of customer service like what Chief Story has talked about with PD.

12.7 MAYOR ENRIQUEZ

I just wanted to note for the record a couple of the public comments. The evaluator that we are going to use to evaluate our city council meetings is not a cost to the city. It is something that is provided from the Municipal League and that is why I want to take advantage of that and then also with that there are a lot of things that the city is working on. We have a couple of Work Sessions that are coming up with the budget and with also some ordinances to come. So, we are looking at public safety. We are looking at social wellbeing. We are looking at the homelessness situation and we are looking at petty crime. So those are the things that we are working on, and we are going to move forward. I just wanted to mention the evaluator is no cost. That is something that is provided and also, I did attend Central Elementary Career Day, so I did go there on Friday, but I also attended this weekend was the first Annual Pecan Festival at Young Park. I was very pleased because that is something that is in our backyard. That is our culture, that is our agriculture, that is staple in our community, and it was the first one there is a lot of vendors there, music and fun and I think it is just going to get bigger and bigger and will represent the city of Las Cruces and the Mesilla Valley all together.

Last night we had our banquet for the Mayor's Top Teens. It is a great program, a great event. Our future is bright to see these young students that are taking the initiative to set a higher standard for themselves is just going to represent our community in the future, so with that I just want to give a special shoutout to our Councilor Mattiace. When he was Mayor, he was the founder. This is actually number 17 that came through so thank you very much.

Councilor Mattiace said thank you very much for the recognition. So, you said such great future when you see these kids and you meet them. They have a lot going for them and I think we speak of a lot of negative but there is so much positive out there when you spend time with these top teens.

Mayor Enriquez said thank you Councilor Mattiace. It is a great event, and we are just going to continue to go and I even mentioned that we are always looking for sponsors. We are always looking for sponsors to help us with this event so we are going to start reaching out to those students from 17 years ago who are now are really successful that they can pay it forward.

13. CITY MANAGER REPORT

13.1 IKANI TAUMEOPEAU

I just have a few announcements. Number one regarding the Taxable General Obligation, our GO/Bonds for 2024. This is one that our City Treasurer said to share as information just to keep you apprised. Bonds were sold by competitive sale on March 14th, 2024. Robert W. Bayard & Company was the best bidder for the bonds. The sale amount was at par $6 million as directed with a premium of $32,483.50. That effective interest rate of 4.79% less than 10%. Purchase discounts of 0.52% less than 4%. Bonds closed on April 11, 2024, city receives the bond proceeds, final payment on bonds specified as August 1, 2032, which meets ordinance parameters.

This presentation fulfils the final requirements of the ordinance to report to you, council, and Mayor on the details of the pricing certificate and awards certificate at a regularly scheduled public meeting of council.

There was a public comment on animal control ordinance and just an update. I appreciate Barbara who is on Teams right now following us. She was able to get an update on the 11th of April. Talking with PD and Gino and Joy Wiitala, they are working on the Animal Welfare Ordinance. So, I just want to give everyone a heads up. They have a solid draft, and they are working through that and what they are saying is that they can approach many of the concerns that have been posted by groups. So please stay tuned on that and more to come from Chief and their team, I am sure.

I appreciate Sonya getting with many of the department, one being JU. They are reviewing the new EPA Regulations for PFAS, which is a chemical that is manmade found in many of the products including foam that trickles down into the cells that is bad for humans and causing cancer. The good news is that we believe our wells are within regulated compliance and so that is a great thing. We appreciate Adrienne and her team in testing the water and making sure they are safe for our residents. Also, a press release is planned to be released later this week, so I just wanted to give you all a heads up on that.

Congratulations to our Sustainability Team. They have been awarded $500,000 from the Department of Energy for the of Plugged in for Good Alliance. This essentially means what they will do with the funds along with its sustainability partners within the community will develop a market-based home retro fit program and skilled workforce to increase energy efficiency, affordability and assure residents comfort and safety during extreme heat events.

Last but not least we have our museum team. They have two big exhibit openers that drew 390 attendees, High School Senior Art Show and artist Roberto Salas. Additionally, there was an eclipse party that drew about 500 attendees.

The Parks and Rec Department in collaboration with Keep Las Cruces Beautiful will host its first Art Recycling Show. The Art Recycle Show will be part of an Earth Day event Friday from 5 to 8 p.m., April 19, 2024, at Plaza de Las Cruces. For any questions, please reach out to KLCB. Great American Clean Up, this is a call for volunteers so if you know anyone who is interested in the community, please reach out to KLCB. They will have a clean-up from 8 a.m. to noon on April 27th. A lunch will be provided for all volunteers from 12 to 2 on April 27th at Walmart Super Centers within the city of Las Cruces individual volunteer groups and civic organizations are invited to register for this year’s Great American Clean-up event.

14. ADJOURNMENT

14.1

Councilor Becki Graham moved, seconded by Councilor Johana Bencomo, to adjourned at 3:35 p.m.

RESULT:	**Carried**
MOVER:	Councilor Becki Graham
SECONDER:	Councilor Johana Bencomo
AYES:	Mayor Eric Enriquez, Councilor Cassie McClure, Councilor William Mattiace, Councilor Becki Graham, Councilor Johana Bencomo, Councilor Becky Corran, and Councilor Yvonne Flores

Mayor

City Clerk

MINUTES
Work Session
Monday, April 22, 2024 @ 1:00 PM
City Council Chambers, City Hall

PRESENT: Councilor Johana Bencomo, Councilor Yvonne Flores, Councilor Becki Graham, Councilor Becky Corran, Mayor Eric Enriquez, Councilor Cassie McClure, and Councilor William Mattiace

ABSENT:

1. JOBS OF THE WEEK

1.1

Sarah Raney, Workforce Connections presented Jobs of the Week.

2. PETS OF THE WEEK

2.1

Amy Defelix, ASCMV presented Pets of the Week.

3. AGENDA ITEM

3.1 FISCAL YEAR 2024-2025 BUDGET REVIEW & PUBLIC HEARING.

Jacqueline Rubalcava, Budget and Grant Administrator gave an overhead presentation.

Srijana Basnyat, City Innovation & Strategy Manager continued overhead presentation.

Cynthia Campo, CIP Analyst continued overhead presentation.

Councilor Bencomo said since we're on the CIP real quick the $350,000 we received

from the State Legislature on Active Transportation that we have not decide how that will be spent yet correct or have those projects been determined already?

Srijana Basnyat asked are you referring to the Cedars Appropriation?

Councilor Bencomo said yes.

Srijana Basnyat said ok Cynthia correct me if I'm wrong but those are going to be under the pending. So they will move over once we receive the actual amount and at that time we will bring the projects forward that would be proposed.

Councilor Bencomo said thank you so those have not been determined yet? I have questions on the new positions. I'm curious about one of the biggest priorities for us this year is Municipal Court and I'm wondering if it was discussed about the position for an internal Public Defender?

Brad Douglas, Interim City Attorney said yes that position has certainly been discussed and we are planning on filling it very, very soon. I don't know if that answers your question but that will be happening eminently I believe.

Councilor Bencomo asked so is that funding going in the Legal Department since I know there was still conversations about whether that person could not report to the City Attorney.

Brad Douglas said to answer your question that funding will be coming to the Legal Department, but that person will not report to the City Attorney to avoid any conflict of interest or appearance of impropriety.

Councilor Bencomo said so for either yourself or Chief Smith I notice there's a new position for another MSW is this a brand new position then or is there an expansion can you talk about the request for that?

Chief Jason Smith, LCFD said we are requesting a licensed clinical social worker so LCSW, we're looking for someone to who will supplement our MIH Team as well as serve as clinical oversight or guidance for our social workers. So this is a brand new position it's one that we originally tried to fill early on with our LIGHT Team, but we were unsuccessful in filling it. Now we feel that it's the right time to bring that position back.

Councilor Bencomo asked because right now the clinical supervision is external, right you seek out external supervision?

Chief Jason Smith said that is correct.

Councilor Bencomo said my last question was for City Manager or HR or Parks even. You know when Parks and Rec presented at the Budget Retreat around the idea for Park Rangers, I never imagined those Park Rangers would be Law Enforcement. I

imagined them being part of Parks and Rec staff. So I'm curious about that decision and if there's still an opportunity for us to discuss what the responsibilities of those Park Rangers and the model that we can use for the Park Rangers?

Ikani Taumoepeau, City Manager said we can definitely have the discussion. We will go into further discussion on the next agenda item on that as it will be presented. Just real quick there's authorities if they're not under the Police they would have the same authority that Parks and Rec staff would have, which is not much at this time. Because they're dealing as you hear here with incidents in the bathrooms, incidents right now where it's very difficult to put our un-sworn staff in that position. So that is a quick thought but Chief Story in the next agenda item can share more into detail or right now if you would like.

Mayor Enriquez said some of the questions I have are with the increase with some of JPA's, is that in the final agenda as well?

Jacqueline Rubalcava said yes the JPA's will be presenting their proposed increases in the next agenda item. Did you have questions on what was currently budgeted?

Mona Charney, Vice President of the Friends of Thomas Branigan Memorial Library said an organization with 244 members. I'm joined today by several members of our board, and we would like to just offer our support for the Branigan and the Las Cruces Library system. I was drawn to support this library as a passionate believer in the indispensability of the libraries to our lives, our lifestyles and our community. I am here today to advocate for Las Cruces public libraries. As you know many members of our community have Las Cruces public library cards but today there are many more who are looking for more than just books. Today libraries can be the heartbeat of the community. They have classes and programs for all ages, story times for children, opportunities to develop skills in computers, crafting and many other items that are of interest to our community. The library offers maker spaces, safe spaces, work areas and recreational spaces. This year our incredible library has offered over 1300 programs serving nearly 22,000 residents. The library welcomes all who chose to use it, regardless of who they are and where they live. Successful library programs depend on two things, funding levels that are consistent with the size of the population being served and excellent staff. Our current library staff members are absolutely amazing. The City is estimated to have approximately 115,000 residents and that number is well over 200,000 when it includes residents in the County. I don't live in the City limits, but I use the library constantly and I carry with me 17 letters of County residents like me who've taken the time to remind you that these resources are used by all of us. When we make a drive to the library we are likely to shop and eat downtown as well adding to the tax base of our community. But also would urge you to collaborate with County officials and remind them that these resources are available to their constituents too and to ask that they provide more support for Las Cruces Public Libraries. I represent a tremendous cross section of people. Mr. Mayor thank you very much I appreciate your time.

Kathe Stark, Member of the Public said I just wanted to say how utterly disappointed I am that for what I believe is the 8th year in a row, we have not put value in our animal

control officers and increasing the size of that staff. While the population continues to grow and many which have animals we know, the staffing level for Animal Control has remained stagnant and that's extremely disappointing. Thank you.

3.2 COMMUNITY LIVABILITY.

Barbara Bencomo, Chief Administrative Officer gave an overhead presentation.

David Sedillo, Public Works Director continued overhead presentation.

Steven Bingham, Parks and Recreation Director continued overhead presentation.

Brad Douglas, Interim City Attorney continued overhead presentation.

Chief Jeremy Story, LCPD continued overhead presentation.

Natalie Green, Housing & Neighborhood Revitalization Manager continued overhead presentation.

Chris Faivre, Deputy Director Economic Development continued overhead presentation.

Councilor Flores said so on the well replacement by the Natatorium. When we put in that request for the funds would it have been possible to ask for funds to replace the well? I mean would that be part of the project because actually it was you had to remove it in order to build so would that have been kosher for lack of a better word?

David Sedillo said at the time that this project was on going EPA said that they may request that the well get re-installed. So at that point in time we didn't think it was feasible to actually budget for a well that may not have been asked for to be re-installed. At that point we did not know however we did identify costs when we understood that they gave approval for the decommissioning. Now at this point in time we have no budget for that. We understood what the cost may be but as a matter of fact it has actually increased overtime.

Councilor Corran asked how much does one block of sidewalk cost?

David Sedillo said that is going to vary greatly. Whether how many drive pads are on there but I will give you somewhat of an estimate. We did have a request I would want to say maybe a month and a half ago and we went out and did that estimate. To do that stretch of block with the curb and gutter that needed to be replaced building the sidewalk and drive pads it came out to a $110,000.

Councilor Corran said I will just use that number and put it in my brain as what one block of sidewalk costs. It may or may not be accurate going forward, but I like to have a number. My next question is for Natalie. I recently learned that when affordable housing projects are on the books they have the waiver of the impact fees on those projects, and I sort of came to realize that means that someone has to pay for those things like utilities hookups and perhaps park related impact fees and other

things. Do those get added into the project and would those be part of these projects in this request?

Natalie Green said the way the program currently works, Affordable Housing is eligible for an Impact Waiver. We consult with the fee affected departments and then make them whole. So it comes from our budget and then we would pay for either Parks or Public Safety Impact fees. Because utilities is an enterprise that will always get paid by some source of funding. We are looking to retool that program and ask for out and out waivers, but we also recognize that has an impact to departments who rely on that to pit funds for revenue or the public safety they're realizing on those impact fees for programming.

Councilor Corran asked so that's not part of these?

Natalie Green said correct, we have not included impact fee waivers in the budgeted amounts.

Councilor Graham said Chief Story just two quick questions for you. In regards to the Park Ranger Program, would deployment of those personnel be based on a floating hot spot kind of model?

Chief Jeremy Story said obviously there is a lot that is still in development but that is my idea is that we concentrate the Rangers in the areas that need them the most. That would be based on kind of a rolling hotspot map or issues that come up. During the day they would go to different parks spend some time, but they may go back to a park if an issue develops.

Councilor Graham said I think I've asked you this before, but I don't know if I've said it out on the record. Would these personnel be available for our multiuse trails? I'm never quite sure where our multiuse trails are classified but is that a possibility?

Chief Jeremy Story said I'm not opposed to that. I think Parks and Rec, I don't want to speak for them, but I don't think they would be opposed either. If the program grows and if it's successful it would be easier to incorporate more parks and more areas. The downtown plaza is technically considered a park so they can also be used for certain events or times downtown.

Councilor Graham said that's interesting I didn't realize that. Then finally I guess I'm still on the multiuse trail frame of mind. The non-sworn employees do they have basic first aid training?

Chief Jeremy Story said we probably haven't done the best job historically but in recent times all of our Animal Control, Codes and PSA's do a full first aid and they also do trauma care training and that would include the Park Rangers.

Councilor Flores asked do you have any idea about what the rent will be at the Peachtree Canyon and at Amador Crossing? What would be the affordability indicators for who and for what population?

Natalie Green said well so for Peachtree Canyon we have the ability to go up to 80 percent of area median income. Given the level of funding sources the rents would be based on whether they're a one bedroom, two bedroom or three bedroom but they are typically below fair market value. I don't have those numbers off the top of my head, but I can send that chart. A one bedroom sits at about $750.

Councilor Flores said $750 for a one bedroom.

Natalie Green said it's around there but the market rate for one bedroom is typically $1200 so that's why we're well below that market. All Affordable Housing Projects have an affordability restrictions so they will stay affordable for anywhere to 30 or 40 years. So those rents will be restricted for that period of time.

Councilor Bencomo said I just want to thank you Mayor and the staff for putting together this community livability presentation. It's both really powerful and telling kind of exposing the tremendous needs that we have at the City. Which is why I guess I'm not surprised at the last addition to the presentation. Which I'm sure I wasn't surprised I didn't hear a general gasp in the audience, though I think I'm sure that it's coming. I think it's a really important conversation for us to continue to have given the needs that were discussed here and given that the Telshor Fund is not a fund that has a consistent revenue stream. Once that is gone, that will be gone. I think we all just need to deeply understand what that means. So just so that I'm clear, every presentation here was for a request to come out of the Telshor Fund, correct?

Barbara Bencomo said no there were some items that we spoke about here that were actually budgeted out of the General Fund. The Legal Programs for example and the police Real Time Crime Center techs, those new tech positions are budgeted out of the General Fund as well so there's kind of a mixture.

Councilor Bencomo said I did want to make sure that we were being clear on that and obviously the cannabis for the MRA's. For Municipal Court then the PD was we said the Public Defender was a re-classification so that's covered there. Then the Case Manager was a re-classification, correct?

Barbara Bencomo said correct.

Councilor Bencomo said so those are covered. Then the request for the ankle monitors would that be a brand new request?

Barbara Bencomo said that is a brand new request and that is budgeted out of the General Fund.

Councilor Bencomo said then obviously you know I think we want to bring Judge Filosa back for a fuller presentation on Municipal Court and their needs and just wondering if they know about this request and if they're sort of setup to handle a program for right now?

Barbara Bencomo said so we reached out to the Judge and staff over at Muni Court,

and they provided us with the particulars and the estimate for the funding required to support that program.

Councilor Bencomo said I talked about this during my comments a while ago about at the State level many of the court fees are going away this July. Did that come up in your conversation with the Judge and how are we planning for that?

Barbara Bencomo said it has not come up in the conversation. So that I don't have any information about that I'm not sure if City Manager or Legal has any information about that. But I have not had that conversation.

Councilor Bencomo said that's ok it's not for today. I just wanted to put it back on everybody's radar so that some of those fees are going away and we'll either have to supplement or by adoption, adopt them ourselves. I'm generally not in favor of that and making it a debtors court. But I think that is an important consideration for Municipal Court and their budget. I guess for Public Works on the sidewalk gaps you know we just finished the CIP presentation where we talked about the potential $350,000 that is coming from the State Legislature this year. I know it was about $600,000 plus you mentioned was the need for that David. But I'm wondering if that it's a pretty good chunk, right to get us started. I'm wondering if that could be something we could consider.

David Sedillo said I would only state that monies coming into the Active Transportation bucket also include other installations that may or may not have a funding source and therefore that's why we made the request.

Councilor Bencomo said on Parks and Rec I really appreciated your presentation on the three parks on the three legacy parks. I think, I may get some emails on this on my brand new constituents, Pioneer Park is the newest park in District 4. I know there is a ton of advocacy that goes on for Pioneer Park and it's a beloved park it's a beautiful park. I definitely support the investments in infrastructure there, however just a tiny little asterisks. I think parks like Apodaca Park and Young Park are parks that are highly utilized by a lot of families, and I loved how you started this about the great equalizers and who uses parks and who they should be for, right. I guess I would ask us to honestly prioritize Apodaca and Young Park as we talk about these major renovations and the need and who the needs will impact the most. Not because I don't like Pioneer Park and I don't see the need for it, but I just see a much, much greater need for both of those parks. I'm wondering if you're asking us for guidance on prioritization on it. I know the cost for both of those parks is quite tremendous so I'm just wondering if you could speak a little more about the prioritizing of those parks.

Steven Bingham said I agree with you that Young Park has a greater need but the target where we were trying to come in financially and where we felt like we could get support, we felt if we prioritized Young Park we could only do one park. The other reason is, is because Pioneer has a lot of money $860,000 in a grant and as we looked. There's three parks that we have Master Plans that we've gotten budgeting number on them, and they come out to about $400,000 to 460,000 an acre to do a whole renovation of a park. I checked out in the industry and that number is

something that the other Directors that I talked to are seeing. So it was important for us to hit parks where there were grants so we could get a greater impact on that park. Because we didn't feel that it was a viable thing to put $460,000 per acre into these older parks. The other thing is the reason we chose Pioneer is we thought we could go in there with a little less money and put more toward Apodaca, it didn't quite work out that way as the numbers came in pretty similar. But we also felt like Pioneer with it being the oldest park historic park, a park built in the 1800's at the push of the women's organization who saw a need for it, and we felt like with it being such a historic park there was a need for that park to be the class of the system. So I would be fully supportive and on board in moving over to Young Park. I think Young Park will take a little bit longer for planning. We're further along in the planning stages with Pioneer than Young so I agree with your sentiment it's needed more and that's why we actually had plans to bring Young back this following year.

Councilor Bencomo said thank you and then here is my additional consideration as you were talking and talking about park rangers and we're talking about potentially about parks that see a greater threat to safety. I mean I don't want to go out on a limb but because I don't know for sure but maybe Chief can help us determine which of these parks perhaps sees more of that. I imagine that Young Park is one of those parks at the top of the list. I don't want us to say we're only going to invest in enforcement in Young Park but we're not going to invest in the needs of Young Park in terms of infrastructure that is equally important for Public Safety, for usability and those kinds of things. For me those are a really important balance to keep in mind as we're talking about how we look at Public Safety and how we invest in it. I think even if it takes some phases to get to the needs for Young Park as you're coming to us for requests, that is at least my preference. My preference is that we focus on the two parks that serve the most people and have the highest needs. I love your sentiment about Pioneer Park again I love that park, love that community. I just see the needs being much, much greater for these two other parks.

Steven Bingham said you're accurate the need for Young is much greater, yes if I may add a couple things. Parks and Recreation Industry has been late to the table on research and putting things out there. But Parks not only serve to be the great equalizer, but research is showing that they're one of the best things for reducing mental health challenges and one of the things for reducing crime. If you have safe parks, you have safe neighborhoods. But if you have dangerous parks it bleeds over into your neighborhoods.

Councilor Bencomo said I have a lot of questions just about surveillance technology and how we best reduce the potential harms of surveillance technologies on communities like racial profiling and those kind of things. I believe that can be done through policy but I'm wondering if there was going to be in the future a specific work session on Real Time Crime Center and how that's going to work, and the community can ask questions and be involved.

Chief Jeremy Story said I don't have an answer for the work session but on the town hall this Thursday one of the things we're going to talk about the Real Time Crime Center and some of those concerns. But just quickly want to address, obviously there

is a balance to it and so some of the things we do to insure that the balance is kept in order is one limiting access to those that need it, two is auditing procedures so that we're making sure that we're monitoring that the data that is being retrieved for the proper purposes. That everything has an audit trail these days which is good for us, proper policy. So there is a lot of good mechanisms in place or will be in place to help make sure that stays in balance.

Councilor Bencomo said I think one of my biggest in just some of my research around these kinds of tools is around data collection are some of the biggest questions I have. Like how long we keep data for. When we share it with other entities like the data sharing agreement. You know I particularly have concerns with just sharing data with entities like ICE for example. I have a ton of questions around that. I don't want to come to the town hall and take up time myself from the community members. I guess my request would be that we do have a work session.

Chief Jeremy Story said let me just mention data retention was the one that I missed. Retention periods have to be balanced so that we are able to solve crimes and hold people accountable for victims. But also not keep data longer where it becomes a concern. The retention rates that we have set now are thirty days for license plate readers. Which I think is a very reasonable amount and 7 days will be for all video. So a week is what we plan on setting it at, which is not a lot of time, it means people have to move fast if there's a crime. But it also helps assuage those fears that we're keeping data for a long time, or we can go back and put something together we shouldn't.

Councilor Bencomo said ok thank you Chief maybe what I'll do to is email you some questions. But again I think it's very important that the community understand all these, and I am glad you are having a town hall. On the MRA Chris this is for you. I think it's really important that we start talking about future planning for the MRA's. I always like telling people this, can you remind us how many MRA's Albuquerque has right now?

Chris Faivre said I believe they have about 21. So they have a whole office for Metropolitan Redevelopment. It is very much a part of how they move their Economic Development Strategy forward in the City of Albuquerque.

Councilor Bencomo said I love that, and I think for me again when we talk about Public Safety and Community Safety revitalization of areas that have long been neglected has been such an important part of that. So Albuquerque is setup when July 1 hits this year that all of those 20 areas will begin collecting their own revenues correct?

Chris Faivre said so if you're referring to the change in the State Statute yes. I believe beginning July 1st, you can start your baseline collections. So in order to implement the potential tax increment you need to do a twelve month collection to see what that baseline is. It is very similar to what we did with the Downtown TIDD. So that baseline as you saw in the data that I provided to you on the TIDD today, anything above that up to 75 percent of those revenues go back into the MRA, 25 percent back into the

General Fund. So yeah we will be starting at a minimum our collection on the two new MRA's that where established and then anything additional Council wants to look at.

Councilor Bencomo said that's great, and I'm really excited about that, and I think it's so important for us for future planning of future MRA designations. I think there was like 10, 12 Chris from the report?

Chris Faivre said the designation report actually identified 6 areas. So we had the El Paseo, South Solano, West Picacho, there was also an East Solano to Telshor area. There was the Apodaca Blueprint Area and then probably the two other areas that were high need were the Amador Proximo area just west of here down towards Valley and then of course the original Mesquite Town Center area. Those were the ones identified and so we pick the first two to move forward with.

Councilor Bencomo said Chris can you re-circulate that report amongst Council because there's obviously new Council members that I think it would be really good to see that. I would love for us to see City Manager and Mayor for us to move forward with, just even if we don't have to go out to RFP's for new MRA's but just establishing them that way we start the baseline collections, so we are prepared for the future. I think that's really, really smart. Thank you for bringing that forward.

Chris Faivre said that could be done by Resolution, we could bring that back referencing the designation report and just have Council designate those remaining areas as an MRA. Just so we can start that baseline collection and then plan future planning initiatives in those areas as time and finances permit.

Councilor Bencomo said I think if we establish those other 4 that would be great and then in that conversation we could determine which of those are priorities. Which of those we want to do 3rd, 4th and 5th etc. So we're not tackling them all at once. Actually just on the GRT this might be for you or for Leeann. Can you talk a little bit more specifically about what it is right now, the percentage the height of it. Those are what it is right now?

Chris Faivre said correct this is, I worked with Dr. Torres the City's Economist to put together some current GRT collections from around the State. This kind of just shows you as things stand today where the GRT rests. You can see some cities above, where we are currently and couple of cities below because. Obviously this isn't all of them, there are some regional ones. Then of course the larger cities in New Mexico.

Councilor Bencomo said I wish I had this slide at my community meeting a couple of weeks ago because someone was adamant that we had the highest in the State and I was I don't think so ma'am and now there's the data. Can you just talk about then Council authority a little bit more and then what we would need to go out for referendum for the community to vote on?

Chris Faivre said certainly so Council via ordinance has the authority to increase the GRT. That would generate approximately $9,000,000 per year. The out to referendum option would generate potentially another $11,000,000 on top of that. That's where

you're looking at your $20,000,000 a year generated through those two options.

Councilor Bencomo said I think part of what you said on the slide was about bold options and bold can sometimes be scary. I think we're in a time coming out of Covid that inflation is high. I think there's important considerations to make and to have conversations with the public around just how expensive everything is right now. Those things are true but they're also then true for the City, right. It's much more expensive to fix a sidewalk. It's much more expensive to fix a park now as well so I think those are all important conversations we need to be having with our constituents. For this conversation to move forward I think it's really important to do town halls and community outreach meetings. Is that something that staff has talked about? Or is that something that you all need guidance on today?

Chris Faivre said probably a little bit of both so City Manager's Office has discussed bringing this back to Council in the form of a work session specifically on this topic in early June. There is a timeline that we would need to adhere to if we're going to get this on the ballot in November. Which means we have to have a consensus by early August. So working backwards from that timeline early June to bring this back for further discussion and then if Council wants to add additional public comment opportunities. We could certainly look to accommodate that, during that timeframe as well.

Councilor Bencomo asked this might be coming out of left field, but do you have data on property taxes?

Chris Faivre said I don't have a lot of detail on that, I'm sure Leeann can. I do know there is an option via ordinance that the Council can act to increase property taxes under their taxing authority. I believe that number is somewhere in the neighborhood of $6,000,000. But I know Leeann could probably provide more details on that.

Councilor Bencomo asked property taxes that differs from GRT is the split with the County correct?

Chris Faivre said that is correct. I believe that would be our portion.

Councilor Bencomo said I see. I guess if we do a work session on the GRT I would love to understand all of our options on the table and what that could mean. So if we go to referendum and let's say the voters approve it. Then that's the max that could never be increased again unless it goes back to a referendum or how does that work?

Chris Faivre said I believe that will cap out our taxing authority at the local level if we go out to referendum for the full amount unless there were some changes at the State level.

Councilor Bencomo said which I think is an important consideration for sure.

Councilor Mattiace said Steve could I ask you some questions? Going through the PowerPoint if maybe you could tell me the revenue for the parks? I've only been

around for 4 months, and my memory only goes back 17 years ago. Is that developers fees for parks?

Steven Bingham said Councilor Mattiace are you referring to park impact fees?

Councilor Mattiace said yes.

Steven Bingham said currently the park impact fee is $2600 per unit. We are currently doing a study, the park impact fees have not been raised it's my understanding for a decade.

Councilor Mattiace asked ok then in your PowerPoint you mentioned about a strategy for deferred maintenance, why was that done? Was that the lack of impact fees, lack in leadership, lack in all?

Steven Bingham said impact fees can only be used to maintain the same level of service as the community grows. So if your current level of service is 3.79 acres of parks you can't use park impact fees to increase your level of service. It has to remain the same for that vehicle. There are other vehicles, but that vehicle can't increase it. Your next question is why our parks got the challenges they are. I think historically our parks people have worked very hard with the work they have done. But as I look at it our funding is lower than the greater portion of, people we're in the lower quartile of funding in parks when you look at the funding per resident.

Councilor Mattiace said you mentioned about pivoting from the deferred maintenance strategy. Can I get the particulars on the pivoting?

Steven Bingham said I think I've made a bold request. I've been told it's a bold request, something that I think is more than the Council historically have received and I put forward a request to try and really attack these issues in our parks where there's deferred maintenance and let's restore our parks, let's try to make them look like they're new, inviting etc. and that's the pivot.

Councilor Mattiace said I think you made a very good point in the last four or five years with the crime increases. I know Chief Story and the previous Chiefs and all the crime that's in the parks particularly Apodaca Park and others. If the park are not safe, if they don't have rangers, if they don't look good, some neighborhoods with abandoned buildings. If you have that type of look you're going to attract or have increases in crime and thank you of that statement.

Ikani Taumoepeau, City Manager said Councilor Mattiace I just wanted to share a thought, you had questioning what's happening from prior times of deferred maintenance happening at parks and rec. What I know from the short time that I have been here is our Parks and Rec previously they have been challenged with a very tight budget which they haven't been funded with, that's what it comes down to. They have done the best that they could but given the resources and funding resources. I just wanted to share as constituents will ask you what has happened in the past when you were previously Mayor as well. That's why we shared the option to have that bold

challenge of additional revenues at this time which was not done prior because with additional funds there's potential to hit some of the goals that you and Council may have for parks. I just wanted to make that comment.

Councilor Flores asked could either of you explain for purposes of educating everybody especially our public, as to how the Telshor Fund works? Because it was reported that there's $30,000,000+, the corpus is that amount. Could you please explain what the corpus is, how it has to be protected and the limitations on using the corpus?

Barbara Bencomo said so the Telshor Fund corpus that we spoke about earlier. Essentially represents the funds that we received from the prepaid lease. That is the body of funds that we received that we could then invest. Those long-term investments that we have made have yielded a higher market value overall for that investment for the Telshor Fund. That's why when we talk about what's currently in the Fund we talk about the market value being $42.9 million currently. We started with the $30 million. Actually we started with $26 million in 2004 and received the additional funds more recently. But in total we received $30 million to invest and to utilize. Previously the Council has adopted Resolutions to identify a certain amount of money to be spent for the Health Related Public Services Programs that was $600,000 a year. That actually I believe started out at something $300,000 and it was intended to be a portion of the appreciation of the fund every year so we could retain the corpus of the funds but spend some of the investment increase on programming. So that is one particular Resolution for recurring funds from the Telshor Fund. Obviously the other things you see is approved from the Telshor Fund always come to Council for consideration. Council has the control of what is earmarked to be spent from the fund within the required usage that you have also previously designated by Resolution as well. That is something that the restriction of the fund is set by Council through Resolution and then effectively as you have designated funds to be spent they come to you by Resolution and that is what I'm showing here with previous proposals as an example of what's been previously approved by Council from the fund.

Councilor Flores asked the funds that are distributed to different organizations are the limitations on the kind of organization it is? Does it have to be a 501(c)(3) and that sort of stuff?

Barbara Bencomo said so with respect to the Health Related Public Services actually I am going to ask Natalie come up and speak a little bit about that. Because there are requirements and of course there is a committee that makes recommendations to Council about what to spend the money on and who to receive those funds.

Natalie Green said so the main three eligibility criteria for a nonprofit providing services under Health Related Public Services is that they need to provide direct services to the sick and indigent that meet the definition of continued physical, mental, developmental, emotional and social wellbeing. In addition to that they do need to be a registered 501(c)(3) and providing services within the City limits and they need to have a basic level of internal controls to demonstrate that they are providing those

direct services that they have you know a functioning accounting system, audited financial statements or an audit. Again in order to provide that transparency back to Council and the citizens that we're spending their money wisely. The biggest thing again is direct services, demonstrated direct services to the sick and indigent or low income.

Councilor Flores asked can you explain again why we keep the corpus? Why we don't pierce as accountants say the corpus?

Barbara Bencomo said this is certainly at the Council's discretion, but Mayor Pro Tem mentioned earlier that there is no more revenue stream for the Telshor Funds. We received this as the prepaid 40 year lease payment for Memorial Medical Center. We don't receive funds on a regular basis or annual basis, it was a one-time prepaid lease and then with a later addition of the escrow funds that came forward. So there's not a regular revenue stream into the Telshor Fund. So with that I know that previous Councils have been very cognizant of maintaining the corpus of the Fund because again we don't have something to replenish that Fund. I think Mayor Pro Tem said earlier when that fund is gone there's nothing to replace it. So that's why there's been quite a bit of thought with respect to the types of expenditures and the amounts of expenditures that have previously come forward and been contemplated by the Council.

Councilor Flores said the Fund is growing, there's not automatic but there is an investment growing in the corpus.

Barbara Bencomo said so we have been very fortunate in our investments and again I mentioned that the Telshor Funds are designated as long-term investments. That is the only fund we have with that designation that allow us to invest through the State Investment Council. We have had good years for investing. We have had very lean years for investing just like you might have with your personal investment as well. But overall over 20 years the investments have done well and previously as I mentioned we had been spending fairly small amounts from the Telshor Fund limited to that $300k distribution up to most recently $600k and now we've seen some larger projects be funded out of the Telshor Fund.

Councilor Mattiace said I can remember in 2004 we had a Councilor Wesley Strain he required that most of those funds, use a majority vote. Is that still in place or has that been changed?

Barbara Bencomo said the use of the Funds still requires a majority vote here in Council. To approve those expenditures. We would typically bring them to you during the budget development process. However there are times during the year we have brought forward proposals for the use of the funds, but it always comes to Council and always requires a majority vote.

Councilor Corran said so just to this bigger question, which is you're asking us to spend the Telshor Fund on the, not you personally collectively. What this means is we are facing deferred maintenance that has caught up to us and a number of other

things we haven't funded this is asking us to consider those projects as using the Telshor Fund to fund those projects. Which would result in a lower corpus that exists in the State Investment Council. Which has its own I think, I would argue we should have a different investment strategy for it in any case. But that's not what we're talking about here. But I think one of the things I would ask is I think this is coming to us because we're open to this and we understand we're at a point where Public Health and Safety are fundamentally important, and we should fund them. What I would ask is if we did head in this direction those organization that have come to rely on the funds that we have been disbursing. I know that then that would also be eating into the corpus. I'm acknowledging that historically that has been the investment profits that we used to fund that. I think that we should at a minimum if we consider using the Telshor Fund the corpus of the Telshor Fund for some of these projects I would ask that we also consider a sustainability plan for those organizations that we've been funding for a long time through the Telshor Fund with the investment revenue those $600,000. I think that we have been putting the cannabis revenue into the Telshor Fund? No, then in a separate fund we consider that as one place. I would just ask that we consider holding harmless in the speak of how we spend money that process and not say if we're doing this then that will end. I guess would be my ask if we're considering tapping into the corpus that our ongoing investment in Health and Public Services Organizations either have a plan to phase out or a different approach to those things being funded in a different way or figuring out a different way to fund that. I would as that we hold that harmless in this conversation for at least several years to figure out a way to keep funding it, so that is just my ask as we consider this which would be a different approach from what we've done in the past.

Mayor Enriquez said I guess a lot of questions, a lot of things to digest. I would say definitely what I'm in favor of is that we spend the Telshor Fund to get caught up with a lot of things that have been neglected as our parks. Definitely in favor of the Municipal Courts and that's already been pretty much budgeted. The Real Time Crime Center and all is I feel, I've seen it in another municipality it's going on ten years already that it's been in existence. I think we're just behind and we need to get caught up with a lot of things, so we need to spend some money for our Public Safety and for the greater good of all our community. Chris the funding sources that we have you've already mentioned. The ARPA was a onetime funding source correct?

Chris Faivre said Mayor that is correct yes.

Mayor Enriquez said our bond is every four years.

Chris Faivre said correct.

Mayor Enriquez said grants is really left up to chance.

Chris Faivre said yes I mean outside of Capital Outlay it's up to the departments to work with the Grants Department to identify those funding options for those specific projects, correct.

Mayor Enriquez said our impact fees, TIDD all of those are really limited and you

know for certain projects, only for limited use and the TIDD in just certain areas, correct?

Chris Faivre said that is correct the TIDD is limited in project type and within the geographic bounds of the TIDD.

Mayor Enriquez said you mentioned the Legislative Funding when we ask, or we request. You wrote it down as near the mile, how did you reference it?

Chris Faivre said I referred to it as funding the last mile. They like to come in and get us across the finish line.

Mayor Enriquez said I usually write when I've heard from Legislators is they want to see projects that are almost 80 percent complete is what they're looking for when we go and request. I feel that because of timing and because certain items that are on the list for this Community Livability there are some projects that we can carve a little bit more so that we make sure we spend responsibly, and we carve out some of those things. Like anything that's GAP funded is to me something that we move forward with it, and then we go and ask Legislators for funding then we're at 80 percent or the last mile. The other thing is the timing of the parks. If we're looking at doing Apodaca and Young Park if we say we're going to put funds there which I'm all for, I think it's a great thing. Steve thank you, but what kind of timeframe are we looking at? We can't have both parks being worked on at the same time, can we? I mean I'll ask Steve what his are thoughts are on the timeframe.

Steven Bingham said I believe you could have both parks being worked on at the same time. I don't believe we could move quick enough to do Young Park in the next budget. I think the planning that need to occur there precludes it from being done in this coming budget. But logistically doing both at the same time I don't see a problem with that.

Mayor Enriquez said ok, the other one is Pioneer that already has $800,000 in grant money?

Steven Bingham said yes $860,000 in grant money that has been put forth for the Gazebo and there's already a Masterplan on that and so the type of things we need to do there are things that the planning lead time is less. So we can move more quickly.

Mayor Enriquez said yeah and so with that it could also be another one that 80 percent or the last mile that maybe could be an ask at the Legislative Funding at least looking at one of those projects that are almost complete and that would help.

Barbara Bencomo said Mayor I wanted to add that for the last two years we've actually focused on what we called finish line projects and requesting those to the State Legislature in fact Fire Station 9 was on the list for this year as well because we just had a little bit more that was needed. But unfortunately we only got a $100,000 from the State towards that last bit. But that just points out with respect to that funding source we can be targeted, we can be strategic, we can try to understand the

priorities of the Legislators, but it certainly doesn't guarantee the receipt of that funding either. Also I wanted to mention with respect to the Bond cycling for GO Bonds it's every four years but for the rest of our Bond cycling it's every three years.

Councilor Bencomo said I just had one more thought around other funding options. This is really for anybody. But Barbara probably you might know more and Leeann perhaps around any of the recent Legislature given that we have all of this historic revenues. I know that there was certain funding pots through the Legislative Session some on like homelessness initiatives. I'm wondering if what are the options that we can tap into at the State level that can also help fund some of these projects? Like I think this homeless initiative is my understanding is very broad so could we tap into it to help support Project LIGHT for example or to help support increase Mesilla Valley Community of Hope Outreach? I know there is a ton of money that was set aside for Law Enforcement. Is that something we can tap into to then help fill whatever they're spending is for the Real Time Crime Center? Are those like some of the strategies that we're going to be looking at employing here as well?

Barbara Bencomo said you're absolutely right and with respect to the funding that is available at the State we have seen it go into different pots as you're saying. The Governor has different initiatives for certain things, Affordable Housing for example, and Public Safety etc. So that is part of what we need to strategize on with respect to the funding needs we have and then the funds that are available out there. That's part of what our lobbyist help us to do both at the State and Federal level to look at what our needs are and what the potential funding sources are, along with the timing of those funding sources. So you're absolutely right that will not end with any new funding that we get here. I think in Natalie's presentation she noted that even for some of her projects she's still applying for other funding sources for some of the Affordable Housing Projects, we're always going to continue to do that. Whether is grants at the State level or Federal Level as well. The State has become a little bit more complex with the different funding buckets that they have and the different processes for obtaining those funds. We've done that for years and will just expand that effort as well and continue it.

Councilor Bencomo said let's say we spent $1 million we pay for that out of Telshor and then we know there's money at the State level for those kinds of projects. Are we able to sort of ask for that to reimburse ourselves?

Barbara Bencomo said typically not. I will say that's typically not the case the funds that we get that they can be used to reimburse us for funds we've already spent. We only have that situation when there's very specific times. For example, with the Taxable Bond we just issued for Affordable Housing we can reimburse ourselves for that for example. But it's typically not been with the funds from the State.

Councilor Bencomo said I guess I would rather make sure we expend all of those options and make sure that there isn't money already out there that we can be utilizing, instead of going this route. But if not I think it's, we talk about this all the time about the giant permanent funds that the State has that gets tapped into rarely. I mean for like a decade advocates fought to get one percent of that to go to childhood

education right. Those are these battles, and I don't want us to get stuck in the same cycle with our Telshor Fund that we tap this giant portion of money but then were not using it when we need it the most. So it's definitely a tricky balance but I think an important one we have to talk about, and I think that's what we're doing here today. The last thing I was going to say in terms of different pots of money. I recently saw an article on the Department of the Interior also having a pot of money for parks and park improvements and those kinds of things. I don't know if that's old or that is still an option for us as well.

Barbara Bencomo said I don't know that certain funding source. But typically from the Federal resources for Parks they've been at State Parks designated parks not typically City Parks. But we will have to look at that. I think that as you mentioned, it's tough to try to balance all the different funding sources and but that's what we need to do is just have that strategy. At the State level I was just reading this morning and I passed on an article to our Finance Team that there's some discussion at what level of reserves the State should hold and potentially reducing that because they have set aside so many different pots of money for so many different things, besides the main rainy day fund, if you will. So looking at it in its totality really begs the question about whether they should be requiring that higher level of reserve that they have that could potentially free up more funds as well for the local governments projects. So you know lots of things in the works and certainly because of the request that we received we wanted to be thoughtful and bring this forward to you all today our next step is to bring the budget forward for adoption May 20th. So that's why we're looking for guidance as whether or not we should bring this entire proposal forward on May 20th as we work our way towards adoption of the FY2025 Budget.

Councilor Flores asked would you please share with us how much money is in the permanent fund?

Barbara Bencomo asked at the State level?

Councilor Flores said it's ticking as we speak. It's billions.

Barbara Bencomo said I will have to send that to you. I don't have that on, $50 billion. I don't have that or the exact number.

Councilor Flores said it's like $50 billion.

Mayor Enriquez said so I guess finalizing what I wanted to share was on the MRA using the cannabis excise tax, I definitely support that we need to kick those off and get those going. Then start looking at the future and identifying other places. I guess the questions moving forward in how to continue I think really the GRT looking at those taxes and see what the community having town hall meetings and just public input. No different then what we do with the GO Bond meetings and things. It would be good to see what direction. I'm not in favor of the property taxes because I feel that just stays here. The GRT we have the Sports Complex now coming up we have different sporting events, we can have tourism, we can have events and we can get that shared with tourism in different visitors that come to our community to help us replenish the funds that we spend. But that is something to look at and more

discussion on that. Definitely we have to do something since our funding sources are limited and how we can continue especially when we get the Capital Improvement Projects off the ground and building a safer and better community. Giving direction I would say I'm looking at yes we do spend the Telshor Fund. I'm looking at my colleagues to see if that's some direction we're looking at moving forward in that direction. Maybe carving out some of the items and seeing what can be funded in other ways but definitely taking a step forward and different than what Steve said with the parks is making a bold statement and we need to spend some to get a better quality of our community livability as it's documented.

Councilor Bencomo said thank you Barbara I think that's a good point if you're asking for feedback right now or guidance on how we should move forward with this. It's always interesting when you're there ready to say yes or no, it's a little bit scarier than just talking about it every other time. When the price tag is right in front of you it's a little bit different. I would argue though that I think given that there are potentials for other funding sources for some of these. But I do believe that there are a couple to me feel like key critical things that we can do right now. To me that is Park improvements especially Young and Apodoca Park for me feels really critical. The Real Time Crime Center and Amador Crossings. To me those are the kinds of things that I feel like people would see an immediate, like what would our constituency as immediate change, as an immediate investment, and I think those are definitely some of the pieces that I think for me feel the most critical. If we say we only have a couple weeks to decide before the May budget session and the rest can certainly we can take our time to decide on how we want to move forward with those and try to find potentially funding sources for others. That's at least where I'm at right now.

Councilor Corran said I'm going to strongly ask that we consider the Peachtree Canyon Housing Developments as well as part of our commitment to that and I think that's a place that we can really leverage a ton of money in a public/private partnership that is really important, and I don't want them to get lost off the list.

Barbara Bencomo said I believe that those two were already adopted by Resolution by the Council, so the commitment has been made for those two projects.

Beth Bardwell, League of Women Voters of Southern New Mexico said we respectfully ask the City Council to make an incremental precedent setting investment of General Funds in the Affordable Housing Trust Fund. The City supports construction of Affordable Housing through Telshor funds, more recently through GO Bonds. But has never dedicated a portion of the City's General Funds and the Affordable Housing Trust Fund. The Trust Fund is a proactive tool to increase Affordable Housing the City Council created back in 2010. The Trust Fund is like a bank account from which money could be used for various onetime Affordable Housing needs. Trust Fund dollars are needed to help Affordable Housing Developers offset the costs of City assessed Impact Fees for City Water, Wastewater, Parks and other City infrastructure. It could be used to pay for onetime cost for necessary reports and other work products to help developers keep the Affordable Housing Projects moving expeditiously through the development pipeline. It could be used to pay for Specialized Grant Writers to secure significant public and private dollars to support

locally driven strategies to plan and provide for more housing like a HUD Choice Neighborhood Planning Grant. There's widespread support for the City to increase Affordable Housing as evidenced by 65 percent of voters who supported the City issuing the 2022 GO Bond for Affordable Housing. We ask the City to leverage the Telshor and GO Bond Funding Investments in Affordable Housing by making a precedent setting investment of General Funds in the Trust Fund as well. Thank you.

Yoli Diaz, Member of the Public said on about June 2022 I provided the City a request to use Telshor Funds and Cannabis Tax especially since many people say that Cannabis is medicine towards a Health Care Fund. I understand there are many needs believe me I understand. Prior to the lease of the Hospital there were no issues in accessing Health Care at MMC that I'm aware of. As a non-profit or government hospital my understanding is that they are required to provide charity care that is a tradeoff for not paying taxes. Now I understand MMC was losing millions after MountainView opened and the result was the City and County voting to lease the Hospital. I would like to add that I am concerned for the residents of Doña Ana County who have had denials and delays to needed hospital care at Memorial Medical Center. This is nothing new because I've been officially advocating for residents and had a joint meetings with both City and County leaders Mayor Miyagishima and County Manager Macias since October of 2021. When I checked my recollection of October 2021 there was $46 million in the Telshor Fund through today April 22, 2024, there has been no solution. It is unknown how many residents have had issues, but I will say whether it is 5, 10, 100 or 1,000 more per year 1 is one too many. The Telshor Fund was derived from the receipts of a prepaid lease of Memorial Medical Center, the lease involved an asset purchase which basically means that MMC folks own visible items that at a minimum the City of Las Cruces still owns the land for whatever reason there is a quit claim deed on file at Doña Ana County. It's on a 40 year lease and a little more than 21 years to go. The original intention to use the appreciation of the Fund was to fund programs but to not touch the corpus thus it would have allowed the Fund to exist in perpetuity. I am disappointed that you're considering extinguishing this Fund from what I heard earlier, this very important Fund. I'm disappointed that access to needed Health Care does not seem to be a priority. Thank you.

Donna Stryker, Member of the Public said I just want some clarification on something I just heard. Did I hear that a Resolution had already been passed to provide the funding for two projects Amador Crossing or Three Sisters, which one? I just want to try an understand before I say something.

Barbara Bencomo said it was Peachtree Canyon.

Donna Stryker said I have one thing I'd like to say. I've been to meetings on Amador Crossing and they want $10 million for the project total a little less than $6 million is coming from Capital Outlay, $4 million from Telshor Fund. I was in the construction and lending industry for many, many years. In the industry for 49 years, 25 of it was construction lending $10 million dollars for 50 units is over $200,000 a unit. I would like to know where that number came from. I have no problem with Low to Moderate Income Housing, what I have a problem with is a $10 million project where I have seen no numbers. You don't have numbers because there's no RFP and you can't

issue the RFP because you don't have plans and specs. So I would like to see the plans and specs and I like to know where $10 million for 50 units. It's a beautiful project, I saw the renderings it's beautiful, it's brilliant. I loved what I saw but I do not support $10 million for 50 units, it's not acceptable. I need to understand the numbers and I think you guys should like to understand the numbers as well. Thank you.

Jennifer Kreie, Member of the Branigan Library Board said so I'm not here for the Telshor Fund, but I am here for livability, quality of life. I started my day playing tennis at Lions Park thank you very much. Parks are so important, but the Library is on the frontline over 50,000 people have library cards. You want a bang for your buck you've got to enable the Library to expand and just reach out to more citizens. I can't think of anything as much as I like Lions, I think Apodaca has so much potential, but you've got to support the Library. So I don't know where that funding comes from because the agenda items are a little obscure, but please support the Library. You have supported them, but they need to grow, they need to expand, it's another case of an old building that's gradually declining. So please support the Library. Thank you.

Denali Wilson, ACLU of New Mexico said I'm here to express some concerns regarding the proposed Real Time Crime Center and its potential impact on Civil Liberties. Unchecked Government surveillance has throughout history encroached on the privacy rights of ordinary citizens and any discussion surrounding the acquisition or utilization of new surveillance technology must explicitly address the potential to erode Civil Liberties. We're seeing that the indiscriminate use of surveillance technology in policing are turning our communities and particularly poor communities and communities of colors into human fish tanks and virtual prisons where residents are treated as perspective criminals and monitored and scrutinized and stigmatized 24/7. These conditions exacerbate the very problems that they're purported to solve by further eroding the trust between law enforcement and the community and by worsening societal inequities by disproportionally targeting people of color, poor people, politically unpopular groups and other historically marginalized groups. We urge the City Council to consider the profound Civil Liberties implications of this proposed Real Time Crime Center, despite the very catchy name and hard to say. It is imperative that any decision regarding surveillance technology prioritizes transparency, community involvement and safeguards against the unjust targeting of marginalized communities. Thank you for your attention.

Jamie Barsodie, Regional Chair of the United States Tennis Association for Southern New Mexico said I am here today to express on behalf of the tennis community strong support for the addition of the three Park Rangers at our Parks. I have played at Lions Park for many years, I've participated and put on both youth events and adult events and I have personally experienced extreme safety conditions for both myself and the youth. So I support the addition and I really appreciate the addition of Security Guards that have been added when we have activities at Lions it has already made a difference in people feeling comfortable coming out and using the park. Thank you very much.

3.3 FISCAL YEAR 2024-2025 BUDGET REVIEW FOR JOINT POWER AGREEMENTS AGENCIES.

Sergeant Gabriel Arenibas, Las Cruces/Doña Ana Metro Narcotics gave an overhead

presentation.

Councilor McClure asked just out of curiosity where does that $600,000 go that you seized, I'm just curious?

Sergeant Gabriel Arenibas said so our Federal partners because we are a task force FBI they take the seizure, and it goes to them, they go through the process.

Mayor Enriquez asked with the DASO vacancies so did you say two or three?

Sergeant Gabriel Arenibas said they have three at this time.

Mayor Enriquez said three vacancies so when they're doing their contributions, their funding is based on what they expend or with that $300,000 plus or is it based on how much they spend?

Sergeant Gabriel Arenibas said no we get it regardless. So what we don't use goes into a funding expense that we can dip into if we have to for other expenses down the road.

Mayor Enriquez said ok so is it just a shortage, understaffed or overall?

Sergeant Gabriel Arenibas said I don't know to be exact, I know they have some promotional things going and then they have to test for the position, and I know from what I understand they will be testing in May. I'm not 100 percent sure on that but as soon as they get the process and get Deputies lined up to come over they'll possibly give me some agents.

Councilor Bencomo said the list on your seizures on the marijuana seizures given that cannabis is now legal obviously I know there's still folks operating outside of that in the black market. Can you talk a little bit more about that? How much time do you think you all are sort of spending addressing that?

Sergeant Gabriel Arenibas said those seizures that are listed for 2023 are majority of it are from two cases where other narcotics were found, and those subjects were charged Federally. Marijuana is still illegal under the Federal Law, so those cases were not charged at the State level.

Councilor Bencomo asked but they're not like random people in Las Cruces necessarily these were two big cases?

Sergeant Gabriel Arenibas said the bigger cases where their selling cocaine, methamphetamine, marijuana they're pretty much open for one stop shop.

Councilor Bencomo said thank you for clarification and then I just had recently somebody recently ask us you know we don't hear anything about Metro Narcotics, did you defund them and like all these things. Can you just talk a little bit about why

you're why your operations aren't you know overtly public?

Sergeant Gabriel Arenibas said well were officers and deputies in the community we work in, and a lot of the guys do undercover operations. Due to that fact a lot of our investigations are continuing and ongoing. A good example is we have an investigation that has been going on for three years. It's an international drug trafficking organization. I don't want to get to far into it but because of the safety of the agents and the safety of the people that work at Metro Narcotics we try to keep low key for those reasons.

Councilor Mattiace said yeah eight and a half years at the New Mexico Border Authority down in Santa Teresa I noticed you're not getting much Federal Funding and most of the fentanyl that's coming across is coming from the open Borders. Why isn't there more participation funding from the Federal Government for your program?

Sergeant Gabriel Arenibas said we do get Federal Funding. We do have a supplemental funding that comes from HIDTA.

Councilor Mattiace said I'm just looking at that $30,000.

Sergeant Gabriel Arenibas said that is particularly for our Operation Safe Streets with the FBI for violent crime. Narcotics is usually connected to violent crimes, so we do get HIDTA supplemental funding. I don't go over that because I believe they present theirs when they come in front of you. But I only present what we get from the local from Las Cruces Police Department and the Sheriff's Office.

Councilor Mattiace asked do you have sufficient funding?

Sergeant Gabriel Arenibas said we do have sufficient funding but that's something I've been monitoring from the people I presented to last year because of the cost of things rising because of the increase in pay. I would anticipate the next three years or so we will have to ask for more money. But I continually monitor that and right now we're good, but I would anticipate in the next 3-5 years it's a possibility that I'll have to present to the board if I'm still here to increase the budget. So we will see when that time comes.

Councilor Mattiace said thank you for your efficiency and your honesty. I have never seen anyone come and not ask for a budget increase every year.

Jennifer Gorham, Interim Executive Director of MVRDA, gave an overhead presentation.

Andrew Wray, MPO Officer gave an overhead presentation.

Councilor Flores said I am somewhat mystified about the and you did mention about the SCRTD we have less of a "match share" I don't understand exactly. But what is it that we are funding with your organization? We had the Roadrunner so do you have

jurisdiction over that, is that it? Is it a jurisdictional thing or what?

Andrew Wray said basically we're here to provide the Federally Mandated Transportation Planning function. So while we work with Mr. Bartholomew in Transit we don't oversee or engage with it in that manner. We provide the Federally Mandated Planning function for Roadrunner.

Councilor Flores said in thinking about this, it seems to me that the statutory requirement for a certain criteria to be reported to the feds it would be accomplished by the information the Mr. Bartholomew has and why is that we're linked up with Texas and with El Paso probably?

Andrew Wray said with regard to Mr. Bartholomew there is a different category of reporting that Mr. Bartholomew has to do versus what the MPO does. Mr. Bartholomew is on the operations side and obviously there's planning activities that go along with that. But there is a different category of regulatory response in Section 5303 that the MPO is specifically tasked with doing that Mr. Bartholomew is not. Specific planning documents such as Metropolitan Transportation Plan which we're working on right now, the Unified Planning Work Program which is the task list that most MPO's are required to work on, on a biannual basis and documents of that nature are the specific purview of the MPO. Mr. Bartholomew and Roadrunner do not work on that.

Councilor Flores said ok so you're an oversight agency.

Andrew Wray said no we're planning. We don't oversee the activities, we just receive the inputs from the member jurisdictions as far as the activities and do the planning and reporting to the Federal Government on the basis of that.

Councilor Flores asked so do you actually submit plans to Mr. Bartholomew or other municipalities?

Andrew Wray said it's rather the reverse. Mr. Bartholomew and member jurisdictions they give their information to the MPO, and we consolidate that into our various planning documents then that's both distributed to the public and also sent to the State and the Federal Government as well.

Councilor Flores asked why wouldn't the FTA have that function? I just don't understand the function of the MPO just because there is the FTA to report to.

Andrew Wray said well it's because again the different categories of work product that Congress has created and versus the distinction of what the operator itself in this case what Roadrunner performs versus the work that the MPO performs. Again MTP, EPWP, the transportation improvement program, etc., those are the activities that the MPO engages in as opposed to the activities that Mr. Bartholomew engages in actually providing the transit service.

Councilor Flores asked so it's a Federally Mandated function?

Andrew Wray said yes they are all Federally Mandated functions the MPO performs yes. I guess just to answer your second question with regard to El Paso. It's because of the travel shed. Most of the traffic from Sunland Park, Anthony, New Mexico. Those go into El Paso, for that reason it's part of the El Paso urban area as opposed to ours. Because most of that traffic does not come to the North. That's why El Paso MPO is in the New Mexico MPO as well.

Councilor Flores asked did you compare that travel data with the SCRTD?

Andrew Wray said we work with the SCRTD and the SCRTD also straddles both States so yes we do, we do.

Patrick Peck, Executive Director of South Central Solid Waste gave an overhead presentation.

Clint Thacker, Director of ASCMV gave an overhead presentation.

Ikani Taumoepeau, City Manager said I would just be remiss if I didn't take this opportunity to share a few things that will tie into this agenda item. Thank you to your staff Leeann, Jacqueline and the Budget Team that's here today. I have come during this time of transition, Ifo was here last year and now he's gone about a month, 3 days and 30 seconds but who's counting, not I. I've been adopted into the family especially the Budget family so there's been a lot of great things that I've learned from them. Thank you to Barbara and Sonya for your direction and your budget guidance. Thank you to HR, Jo and JC to the team running numbers at the last minute when we need them and thank you to all the departments and we have the department heads they're all not here today but I'm sure they're watching. This is how it loops into the JPA's and the discussion. I have asked our Executive Team to squeeze their budgets because weren't balancing our budgets. When it's presented to you there's been late nights, there's been early mornings, staff is coming in for 4-5, trying to make this work. What has been presented is a balanced budget but it's because I've asked them not just once but because we've had some surprises which typically happens during budget, come up and the budget wasn't balancing. So not once but twice we have come within this past month to department heads to squeeze again, and we've asked them to come down 3 percent of their budget. We've asked them to look at critical needs on level twos and level threes. We've asked them to defer if they have anything that wasn't critical and only put the critical on there. So we've went from $30 million requested to about a little under $5 million requests and we've had departments who've had millions of requests coming in for a small percentage of that. I just wanted to share that with you Council because I would be remiss if I didn't share that we are forecasting revenues, flattening as well. We have a forecaster saying it will dip by two percent next year. Again it's just like forecasting the weather we don't know but that's what we're paid to do is be conservative and so we haven't included this from my understanding what you're seeing in the JPA the additional request especially for the Animal Shelter it's not in the budget, we haven't asked them to decrease. That's why I'm commenting, we've asked all the departments to squeeze by 3 percent. We've asked everyone look once, look twice and then come here and present to you. We do

understand Clint's doing a great job, but I just wanted to present to you all that typically what we ask them to come to Council to present it first and then you share your thoughts, and they go back to the board. I believe they went to the board and came to you, but we've asked them to come to you first, present it. Because what we're asking your guidance, what would you like us to do? We've done all that we could to balance the Budget. We know that there's needs in the Animal Shelter but right now it's the same balancing we're trying to do, and we can only balance so much because we need your desires. We need to hear from you. You tell us, but if you tell us to fully fund what some of the JPA's are asking then we're going to have to squeeze somewhere else. We're going to have to balance levers. This is something that happens as you know but I had to share that there's been a lot of work put into this budget. It's a balanced budget right now but there's levers that have to move as I mentioned before. I just wanted to bring that to your attention.

Mayor Enriquez said thank you for that Ikani, I feel that if that's what the City organizations are going to do it's the same for the JPA's. If you're asking for a three percent reduction then everybody should be looking at that to try reduce and try to have cuts wherever they can. So thank you for that information. I appreciate that.

Title: **A RESOLUTION TO AWARD PROFESSIONAL SERVICE AGREEMENTS FOR CIVIL ENGINEERING SERVICES ON AN AS-NEEDED BASIS TO A&E ENGINEERING, LLC; BOHANNAN HUSTON, INC.; COBB, FENDLEY & ASSOCIATES, INC.; FRANK X. SPENCER & ASSOCIATES, INC.; HORROCKS ENGINEERS, INC.; JOHNSON, MIRMIRAN, & THOMPSON, INC.; KIMLEY-HORN AND ASSOCIATES, INC.; MOLZEN CORBIN AND ASSOCIATES; SMITH ENGINEERING COMPANY; MILLER ENGINEERS, INC. DBA SOUDER, MILLER & ASSOCIATES; STANTEC CONSULTING SERVICES, INC.; AND WILSON & COMPANY, INC., ENGINEERS & ARCHITECTS, IN AN ANNUAL NOT-TO-EXCEED AMOUNT OF $2,000,000.00 EACH, FOR A PERIOD OF FIVE (5) YEARS, SUBJECT TO APPROVED BUDGET APPROPRIATIONS (PROCUREMENT NO. 23-24-050).**

TYPE OF ACTION: **☒ Administrative** **☐ Legislative** **☐ Quasi-Judicial**

PURPOSE(S) OF ACTION:

To award contracts for Civil Engineering Services.

BACKGROUND / KEY ISSUES / CONTRIBUTING FACTORS:

The City of Las Cruces (City) required proposals for civil engineering services. These services are required to perform design services of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities; expert witness in a judicial and /or quasi-judicial setting; project management; and construction inspection.

On February 2, 2024, the City advertised Request for Proposals for Procurement No. 23-24-050, for the purpose of pre-qualifying firms that can provide these specialized engineering services, and entering into agreements with recommended firms. These proposed agreements will be used on an as-needed basis for a period of five (5) years, subject to approved budget appropriations.

The Purchasing program received twelve (12) proposals that were evaluated and scored by the Selection Advisory Committee (SAC) on April 10, 2024. The SAC is recommending award to all twelve (12) rated firms as follows:

1. A&E Engineering, LLC - Las Cruces, New Mexico
2. Bohannan Huston, Inc. - Las Cruces, New Mexico

3. Cobb, Fendley & Associates, Inc. - Albuquerque, New Mexico
4. Frank X. Spencer & Associates, Inc. - El Paso, Texas
5. Horrocks Engineers, Inc. - Pleasant Grove, Utah
6. Johnson, Mirmiran, & Thompson, Inc. - Hunt Valley, Maryland
7. Kimley-Horn and Associates, Inc. - Mesa, Arizona
8. Molzen Corbin and Associates - Las Cruces, New Mexico
9. Smith Engineering Company - Las Cruces, New Mexico
10. Miller Engineers, Inc. dba Souder, Miller & Associates - Las Cruces, New Mexico
11. Stantec Consulting Services, Inc. - Las Cruces, New Mexico
12. Wilson & Company, Inc., Engineers & Architects - Las Cruces, New Mexico

It is advantageous for the City to have a pre-qualified list of engineers from which to select, to get budgeted projects completed. All City departments will be able to enter into individual Project Assignment Agreements with these engineering firms on an as-needed basis. The Public Works Department has numerous projects budgeted throughout upcoming fiscal years. There are also times when special funding (e.g. Legislative appropriations, New Mexico Department of Transportation, etc.) is made available to the City for specific projects. The funding sources often give strict timeframes within which improvements must be designed and constructed to secure the funding. By having a pre-qualified list of engineers, it will not be necessary to go through individual Request for Proposals to contract the necessary work for each individual project. These agreements will allow Public Works, and any other department needing these services, to contract with any one of the twelve (12) pre-qualified firms. As a result, valuable time is saved in the design of each project and staff time can be used on other projects and in other capacities.

COMMITTEE/BOARD REVIEW:

SAC

DOES THIS AMEND THE BUDGET?:

☐ Yes
☒ No

Does this action amend the Capital Improvement Plan (CIP)?

☐ Yes
☒ No

Does this action align with Elevate Las Cruces?

☐ Yes
☒ No

OPTIONS / ALTERNATIVES:

1. Vote "Yes"; this will approve the Resolution and award contracts to the twelve (12) selected pre-qualified firms, to provide civil engineering services for the City on an as-needed basis, to each firm for a term of five (5) years, subject to approved budget appropriations.
2. Vote "No"; this will not approve the Resolution, and City Council will need to provide staff with alternate direction.
3. Vote to "Amend"; this could modify the Resolution based on City Council direction to staff.
4. Vote to "Table"; this could delay awarding contracts for civil engineering services and prevent completion of budgeted projects.

RESOLUTION 24-115

A RESOLUTION TO AWARD PROFESSIONAL SERVICE AGREEMENTS FOR CIVIL ENGINEERING SERVICES ON AN AS-NEEDED BASIS TO A&E ENGINEERING, LLC; BOHANNAN HUSTON, INC.; COBB, FENDLEY & ASSOCIATES, INC.; FRANK X. SPENCER & ASSOCIATES, INC.; HORROCKS ENGINEERS, INC.; JOHNSON, MIRMIRAN, & THOMPSON, INC.; KIMLEY-HORN AND ASSOCIATES, INC.; MOLZEN CORBIN AND ASSOCIATES; SMITH ENGINEERING COMPANY; MILLER ENGINEERS, INC. DBA SOUDER, MILLER & ASSOCIATES; STANTEC CONSULTING SERVICES, INC.; AND WILSON & COMPANY, INC., ENGINEERS & ARCHITECTS, IN AN ANNUAL NOT-TO-EXCEED AMOUNT OF $2,000,000.00 EACH, FOR A PERIOD OF FIVE (5) YEARS, SUBJECT TO APPROVED BUDGET APPROPRIATIONS (PROCUREMENT NO. 23-24-050).

The City Council is informed that:

WHEREAS, the City of Las Cruces requested proposals for civil engineering services; and

WHEREAS, these services are required to perform design services of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities; expert witness in a judicial and /or quasi-judicial setting; project management; and construction inspection; and

WHEREAS, the purpose is to establish a list of pre-qualifying firms that can provide these specialized engineering services; and

WHEREAS, these agreements will be used for five (5) years on an as-needed basis, subject to approved budget appropriations; and

WHEREAS, the Purchasing program received twelve (12) proposals that were evaluated and scored by the Selection Advisory Committee (SAC) on April 10, 2024; and

WHEREAS, the SAC is recommending award to all twelve (12) firms as follows: A&E Engineering, LLC; Bohannan Huston, Inc.; Cobb, Fendley & Associates, Inc. Frank X. Spencer & Associates, Inc.; Horrocks Engineers, Inc.; Johnson, Mirmiran, & Thompson, Inc.; Kimley-Horn and Associates, Inc.; Molzen Corbin and Associates; Smith Engineering Company; Miller Engineers, Inc. dba Souder, Miller & Associates; Stantec Consulting Services, Inc; and Wilson & Company, Inc.

NOW, THEREFORE, Be it Resolved by the Governing Body of the City of Las Cruces:

(I)

THAT the Professional Service Agreements for civil engineering services are hereby awarded to A&E Engineering, LLC; Bohannan Huston, Inc.; Cobb, Fendley & Associates, Inc. Frank X. Spencer & Associates, Inc.; Horrocks Engineers, Inc.; Johnson, Mirmiran, & Thompson, Inc.; Kimley-Horn and Associates, Inc.; Molzen Corbin and Associates; Smith Engineering Company; Miller Engineers, Inc. dba Souder, Miller & Associates; Stantec Consulting Services, Inc; and Wilson & Company, Inc. as shown in Exhibit "A" through "L", respectively, attached hereto and made part of this Resolution.

(II)

THATCity staff is hereby authorized to do all deeds as necessary in the accomplishment of the herein above.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and A&E Engineering, LLC, of 1880 E. Lohman, Las Cruces, NM, 88001, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	A&E Engineering, LLC 1880 E. Lohman Las Cruces, NM 88001 ATTENTION: Adrian Renteria

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

Table of Contents

1. Technical Approach (45 pts) 1
2. Qualification/Competence (40 pts) 4
3. Past Record of Performance (15 pts) 5
New Water Supply Project – Llano Quemado MDWCA, Taos County, NM 5
Site Civil Development – Tommy's Car Wash, El Paso, TX 6
Spaceport Reverse Osmosis Project – Spaceport America, Sierra County, NM 6

1. Technical Approach (45 pts)

At A&E Engineering LLC, we recognize the importance of the services you provide to the community, and we are committed to helping you achieve your mission to provide that great service. With the community's growth the City of Las Cruces municipality sees and ever increase demand for Civil Engineering services. The services being requested to support this project include:

- Transportation Facilities
- Storm Drain
- Utilities
- Site Development
- Construction Contract administration
- Land Surveying Activities
- Drainage Reports
- FEMA Flood studies
- Airport Facilities

With over eighteen years of experience, A&E Engineering LLC is well positioned to assist you with this important project. We have assisted small and rural water utility providers upgrade their infrastructure and private development firms, by providing technical assistance including planning, Site Development, Utilities, Drainage Reports, Storm Drain Design, FEMA Flood studies, bid assistance, construction administration, construction observation, and start-up.

Your engineer of record, Adrian Renteria, P.E., is a graduate of NMSU.

A&E Engineering LLC is based in Las Cruces, NM. We have worked with communities throughout the region and through our work, have extensive experience coordinating with state and federal regulatory and funding agencies, including the NMED Constructions Programs Bureau. Many projects we engineered were funded by NMFA and required that we coordinate with Bureau and prepare document for their review to make sure our designs conform with local, state, and federal requirements.

Our experience working in Doña Ana County has given the experience coordinating with local regulatory and permitting agencies. Through our land development projects, designing

residential subdivisions, commercial developments and associated utility services, we have extensive knowledge and are highly competent to effectively engineer your improvements project.

Outlined below are the main steps to successfully completing your project.

1. The first step in our approach that will be taken to complete this project is to determine the major design elements and identify in conjunction with the owner/operators the specifics on the scope of work and obtain a firm understanding of the owner's end goal at project completion phase.
2. The next step will be developing a set of bidding documents for owner's review. At this point the bidding documents will be considered approximately 60% complete. Coordination with equipment/material vendor representatives will be made to discuss availability and lead times of items being scoped for the project and identify potential setbacks for the project. Communication with the owner will be made based upon findings from vendor representative feedback. Ensure that the owner is satisfied with the design elements outlined in the 60% progress design.
3. We follow that with making needed revisions to the bidding documents based on owner feedback. The bidding documents will then be packaged and sent to the needed review agencies for review and approval. Coordinate closely with review agencies and owner to minimize review duration and provide timely revisions if needed.

Critical issues to keep in mind are the schedule and budget which go hand in hand. In today's state of the market with material and labor costs increasing daily, planning for the extended material lead times will be critical to meeting the project schedule. The project team will identify potential pitfalls and develop a plan and alternatives to present to the owner to maintain the project's schedule and budget within reason.

One might consider our small project team to be a weakness because it does not have the backing that larger firms offer. We consider our size an advantage in that you will be interacting with the decision makers of the company, meaning that you will receive expedited feedback on critical issues that should result in quick response times to potential critical issues and challenges.

2. Qualification/Competence (40 pts)

Adrian Renteria, P.E.

(Principal Member responsible for administration of the contract)

B.S. – Civil Engineering

A.A.S. – Civil/Survey Drafting

Professional Engineer – New Mexico (#21978), Arizona (#66182) and Texas (#129069); NCEES National Record (#59836)

Mr. Renteria's experience with both construction and consulting firms has taught him the importance of putting together detailed construction plans and using value engineering. Mr. Renteria has developed budgets, managed projects, and designed a variety of water improvement projects throughout southern New Mexico. He was the engineer of record on Projects for Llano Quemado Water Source Improvement Project and the Spaceport America Reverse Osmosis Improvements Project.

Mr. Renteria's prior employment as a project manager with construction firms allows him to pull from that experience where his responsibilities included estimating, project scheduling and interpretation of plans and technical specifications. He designs subdivisions and commercial development projects providing site, grading, waterline, gas line and sewer line layout engineering, including one of the City of Las Cruces' main trunk line extension used to collect sewage from the East Mesa service area.

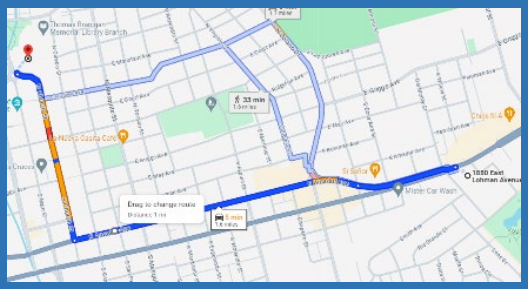
Carlos Gonzalez

A.A.S. – Civil/Survey Drafting

ACNM Traffic Control Technician and Supervisor

Mr. Gonzalez's design experience with a range of engineering projects with an emphasis in site development and water/wastewater systems. Mr. Gonzalez also provides a strong background in Construction Observation in water and wastewater projects within New Mexico that range in waterline installation, sewer line installation and water meter replacement.

Office Location
1880 E. Lohman
Las Cruces, NM 88001
575-649-0254



We can be at the city offices in 5 minutes.

Your benefit from interacting directly with the owner includes responsiveness, prompt decisions, and direct accountability for project performance.

Our proximity to the city allows us to respond quickly in-person when needed and you will be in contact with Adrian Renteria, P.E., the owner of A&E Engineering LLC.

3. Past Record of Performance (15 pts)

Presented below are selected projects on which Adrian served as the project engineer.

New Water Supply Project – Llano Quemado MDWCA, Taos County, NM

- New well project consisted of a new 320-feet deep well with new CMU building well house, chlorination system and 2-inch fill line extension. The project was funded by NMFA through the CPB RIP program. We worked closely with Andrea Telmo with the Construction Programs Bureau and Patrick Castillo with Drinking Water Bureau review agencies.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Bohannan Huston, Inc., of 7500 Jefferson St. NE, Albuquerque, NM, 87109, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Bohannan Huston, Inc. 7500 Jefferson St. NE Albuquerque, NM 87109 ATTENTION: Matthew Thompson

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

ATTACHMENT C – COST PROPOSAL FORM RFP 23-24-050 – Civil Engineering Services
(NOTE: This form shall not to be modified in any way)

Consulting Firm Bohannan Huston

ITEM	DIRECT LABOR / CLASSIFICATION	HOURLY RATE*
1	Principal Engineer	$ 260 (E7)
2	Project Engineer/Project Manager	$ 205 (E5)
3	Senior Engineer	$ 180 (E4)
4	Design Engineer	$ 160 (E3)
5	Engineer Intern	$ 135 (E2)
6	Engineering Technician	$ 150 (ET7)
7	Drafting Technician	$ 110 (ET4)
8	Survey Crew**	$ 280+
9	Construction Inspector/Observer	$ 140 (CO6)
10	Administrative/Clerical	$ 100 (AP4)
11	Field Testing and Investigations	$ case-by-case basis
		PERCENT MARKUP
12	Subcontractor Cost Markup	(%) 5%
ITEM	**MATERIALS / REIMBURSABLE EXPENSES**	**RATE**
	Travel	
13	Per Diem (per day) – Pre-Approval Required	City of Las Cruces Rate
14	Vehicle Mileage Rate (per mile)	Current IRS Rate
	Reproduction Services	
15	Black and White Copies (per copy)	$ invoiced at cost
16	Color Copies (per copy)	$ invoiced at cost
17	Prints 24x36 (per sheet)	$ invoiced at cost
18	Mylars 24x36 (per sheet)	$ invoiced at cost
19	Photo Quality Plots (per plot)	$ invoiced at cost
	Miscellaneous	
20	Any other costs incurred	Case by Case Basis

**Rates are to include all overhead costs and any and all assessment expenses*

***Survey Crew Rates are to include GPS and Total Station Equipment*

Notes: 1. Detailed man hour Estimates are required for T&M contracts and are to utilize corresponding rates

2. Rates in place at the time a project is contracted with the City will remain for the duration of the contract.

RE: City of Las Cruces Civil Engineering Services | RFP 23-24-050

Dear Members of the Selection Committee:

We recognize the City of Las Cruces is in search of a qualified consultant to provide civil engineering services on an as-needed basis for large, multifaceted projects from start to finish. Bohannan Huston, Inc., (BHI) offers the City of Las Cruces a highly qualified New Mexico-based team that has the expertise, availability, and resources all under one roof. We offer innovative approaches and relevant experience to provide the City of Las Cruces with local talent for your planning and design consulting services.

BHI is a staple in New Mexico's full-service engineering and surveying service industry and has been developing projects in Las Cruces from concept through construction. We understand the unique needs and culture of the community and can respond accordingly with support from our parent office as necessary.

Factors that position BHI as the right choice for this on-call contract for the City of Las Cruces include:

Continued Service: As a current on-call engineer for the City of Las Cruces, BHI has the capability to continue providing qualified staff for all phases of a project – from planning and design to construction management. We have worked previously on projects of all scales with several departments within the City, from Public Works, to Parks and Recreation and Utilities, and have a respected reputation with all of them.

Roots: BHI is an established member of the Las Cruces business community with a long-term commitment to the betterment of our City. Our Las Cruces office is staffed by employees who have deep roots in southern New Mexico, many who have studied in the area and now have made Las Cruces their home. When we work for the City, we are working for our home.

Trusted Team: The City of Las Cruces can continue to rely on BHI staff to ensure that your needs for engineering services are taken care of at any time. Leading our team will be Matthew Thompson, PE, as Principal-in-Charge, Tyler Hopkins, PE, as Project Manager, and Diana Gomez as Assistant Project Manager. They fully understand the challenges that many local governments in the area face, especially with budget or schedule constraints. As a team, we are prepared to come alongside the City of Las Cruces and help find effective solutions.

A Successful History of Performance: Our Las Cruces office has been serving the City for nearly 30 years. BHI is committed to providing extraordinary service that improves the quality of life for New Mexico and our clients. We have a large pool of resources – including our teaming partners Cobb, Fendley & Associates, Epsilon Systems Solutions, and COZ Engineering – with which to serve the City. This team of creative staff will be actively engaged in the pursuit of innovative, clear and concise, dependable solutions that meet your needs.

Thank you for the opportunity to submit this proposal for civil engineering services. We are confident the City of Las Cruces will continue to find BHI has the right capabilities, people, experience, and approach to ensure that each project is a success.

Sincerely,

Matthew Thompson, PE
Senior Vice President

1. TECHNICAL APPROACH

A. PROPOSED TECHNICAL APPROACH

Our multi-discipline structure allows BHI to provide end-to-end services, from planning and engineering studies to construction engineering on a variety of projects. Our approach ensures that we can assemble a highly qualified team – one that will leverage cutting-edge tools and techniques – to provide the right technological and cost-effective solution for each project. For any given task order, our general approach would be as follows:

RELY ON FIELD-SPECIFIC DATA We base our study and design efforts on actual field data. In almost all instances, actual conditions in the field predicate the design conditions and the implementation of the most feasible design solution. Our team members understand the value of field-specific data and will collect all relevant information, including surveying and sampling as necessary, for each project before analyses and solutions are developed.

INCORPORATE OPERATIONAL CONSIDERATIONS INTO THE DESIGN We value the operational and maintenance requirements of facilities and incorporate them into our designs. Designing facilities that are functional, effective, and operations-friendly is our goal.

APPLY QUALITY ASSURANCE/QUALITY CONTROL PRACTICES Quality of work is one of the core values at BHI. Fundamentally, the BHI team will refer to the BHI Quality Management System Policy Manual to govern the work being accomplished for City of Las Cruces projects. This manual provides the framework for the system of processes that govern our work. More specifically, BHI will use our tested and proven processes for design, project management, and construction management or administration to oversee the work performed under this contract. For each project, we develop a quality assurance/quality control (QA/QC) strategy that includes:

Staffing: Our QA begins with appropriate staffing, a strategy that ensures your project is performed by qualified personnel. Our team will begin with an internal review of the project scope, as defined during the kickoff meeting with your staff. The purpose of this review is to educate everyone involved on items such as project scope, deliverables, schedule, design criteria, team members and roles, and the project itself. Final plan documents are stamped, dated, and signed by the responsible New Mexico Registered Professional Engineer.

Schedule: The scheduling strategy includes milestones and scheduled inspections based on time frames established with the City. The team will hold weekly meetings to discuss project status and adjust staffing to meet your needs and schedules. Any changes that may impact the project will be communicated to you and will be documented to ensure that the schedule changes are agreed upon and known to all involved in the project.

Design Criteria: Our staff is trained in the latest design criteria. All current design criteria, manuals, standards, and directives are kept in a centralized library, located within the project team's work area.

Constructability Review: Team members will perform a constructability review to verify that the plans are "designed as it will be constructed" for a specific project. Traffic control during construction, construction phasing, work zone access, availability of materials, and the most applicable construction methods will be reviewed as part of this process.

Document/Plan Checking: Quality Control reviews will be conducted prior to submittals at key milestones. The reviews will evaluate design criteria for completeness and appropriateness and will ensure that documents are prepared according to your requirements and that they are well-organized, clear, concise, and technically and grammatically correct. The documents will also be reviewed to ensure compliance with generally accepted Professional Standards of Engineering Practices and applicable laws and regulations. Design deficiencies found during the process will be documented by marked-up drawings or reports and revised accordingly. The design file will include records of formal checks performed throughout the duration of the project.

COST CONTROL OF THE DESIGN PROCESS Our first rule of cost control during the design process is to establish with the City an accurately defined scope of work for the project. Second, experts in each discipline outline the activities and develop the work hours and expenditure budgets required to complete the necessary deliverables for the project. The project is monitored on a weekly basis to determine progress and confirm staffing resources. BHI uses interactive accounting software that allows project managers to review project data and budgets at any time and holds meetings on a regular basis to keep our staff organized and productive.

COST CONTROL OF THE CONSTRUCTION PROCESS Internal communication of project scope is critical to successfully controlling the cost of construction. We invest a great deal of time to the design interface to ensure that estimates of probable construction costs meet both the project scope and the client's budget. These budgets include the necessary deliverables to design and construct the best project for your dollar. Construction cost estimates are prepared at key milestones during project development. A spreadsheet is used for compilation of project quantities and construction cost estimating. These estimates are compared to your budget to determine if it meets your expectations. If the cost estimates are above the budgeted amount and cannot be reduced through design efforts, we notify you immediately and either adjust the project scope to fit within the budget or assist you in seeking additional funding to build the project in its entirety.

COST ESTIMATING TECHNIQUE Our cost estimating approach begins with utilizing existing resources of available cost data from local municipalities (like the City) reviewing any available recently bid projects, NMDOT average unit prices, and an internal database BHI compiles with all projects we design and have bid data for. We also make an effort to have all of our engineers spend time in the field during construction of projects; this is so we can have a solid understanding of construction methods and how they relate to costs. Our cost estimating methods are consistent with the bidding processes used by contractors and are representative of actual project values at the time of bidding. Estimating project construction costs is dependent on three main factors, as demonstrated to the right.

1. Accurate tabulation of all items to be included in the final product to be constructed.
2. Understanding of market conditions and materials based on construction in both public and private sectors.
3. Use of current bid prices from broad-based information sources.

As with all of our projects, we will use each of these bid pricing sources to provide the most representative cost estimate possible after adjusting for current market conditions. BHI also employs several construction engineering inspection staff, who are consulted if project bid items or conditions are unusual and may not fall within a typical unit price cost from a database.

B. AND C. MAJOR TASKS TO BE ACCOMPLISHED AND SERVICES PROVIDED

The BHI team offers the full range of services requested in your RFP. Below we summarize our skills in each of these key areas.

TRANSPORTATION FACILITIES

Over the years, BHI has completed numerous roadway and parking lot projects for the City of Las Cruces, as well as other entities. BHI is familiar with the City of Las Cruces Design Standards and Standard Specifications for Road Construction. We closely follow the City of Las Cruces subdivision guidelines, addressing issues such as drainage and ADA accessibility in designs, as well as taking into account issues such as first responder access. Ultimately, our goal is to provide convenient, safe, and economical infrastructures that can support all modes of transportation.

DRAINAGE STUDIES AND STORM DRAINAGE

As a recognized leader in the field of surface hydrology and hydraulics, BHI has the experience and resources to efficiently complete drainage plans and designs for both small and large projects, from site grading and emergency erosion mitigation plans to large flood control dams, major storm sewer systems, and municipal drainage master plans. We provide high-quality drainage services, including rainfall and stormwater run off analyses, drainage facility optimization, flood plain revisions and insurance studies, drainage system surveys and assessments, flood routing, flood control planning, storm water treatment analyses, and erosion and sediment control plans. BHI has five Certified Floodplain Managers (CFMs) on staff and over 50 LOMRs or CLOMRs to our credit. We are familiar with the Federal Emergency Management Agency (FEMA) requirements and the National Flood Insurance Program (NFIP) with the expertise and experience necessary to address any floodplain needs. We thoroughly understand FEMA processes and standards, allowing us to provide floodplain services and coordination in a fast and efficient manner.

UTILITIES

Water: BHI's team has proven experience in analyzing, planning, and designing water supply systems. We use advanced software technologies to model systems to identify potential supply and operational issues and to predict system responses to proposed changes. Our expertise allows us to develop system master plans considering not only hydrologic, hydraulic, and economic factors, but also water source viability, distribution economics and pricing, water quality, environmental compliance storage, and fire flow requirements.

Wastewater: BHI provides full engineering services for planning, design, construction, monitoring, and evaluation of public, private, institutional/industrial, and on-site wastewater systems. We are experts at applying federal, state, and local regulations regarding wastewater management issues. Our engineers have participated in the planning and implementation of wastewater treatment system projects that involve some of the most modern applications and techniques of water reclamation and applying it to our communities' specific needs.

Other Utilities: BHI's engineering experience and expertise extends to natural gas and electric distribution utilities as well. Our team uses the latest in gas modeling software to plan high and low distribution pipeline networks to handle various types of demands for public utilities that operate their own system. We are familiar with steel and polyethylene pipeline system design and the intricate aspects that dictate how these systems are to be installed. We also provide support for medium-voltage electric distribution for public utilities that operate their own system. BHI employs modeling software for our designs and utilizes modern power electronics equipment within our design to ensure the safest and most practical maintenance scheme possible.

SITE DEVELOPMENT

We understand the sophistication and uniqueness that is required on all parts of planning, analysis, and design for site development work. These types of projects often require a detailed and innovative approach to develop workable, cost-effective solutions. We draw from our combined expertise in each area of civil engineering – such as transportation, water, and structures – to achieve such solutions and, ultimately, to meet the mission of the users. Our site development experience allows us to target the critical issues to arrive at good and timely decisions that cater specifically to the individual needs of our clients.

SUBSURFACE UTILITIES EXPLORATION

We have enlisted Cobb, Fendley & Associates (CobbFendley) to provide subsurface utility engineering services. CobbFendley's well-trained and well-equipped SUE team has completed over 3,000 SUE projects to date. With more than 40 years of utility experience, CobbFendley brings extensive knowledge and foresight in dealing with potential utility conflicts, utility locations, sensitive field conditions, time constraints, and budget requirements. SUE services include utility mapping at appropriate SUE Quality Levels, utility design and relocation, communication of utility data, and utility agreement preparation.

CONSTRUCTION CONTRACT ADMINISTRATION

The BHI team provides full-time construction phase services from inspections to overall management. Our engineering staff will complete construction administration tasks such as shop drawing and submittal review, review of payment and change order requests, requests for information, and project close-out. We can monitor all construction activities to ensure that the project is constructed in compliance with the Approved Contract Plans and Specifications. In order to provide a consistent and transparent documentation platform, we use our web-based BHITracker software as a central location for all project-related materials. Our experience with and use of BHITracker has consistently demonstrated improvements in communication and construction management where project progress can be seen by all members of the project team.

LAND SURVEYING AND MAPPING

BHI survey crews provide a variety of survey services, including construction staking and layout, digital leveling, boundary surveys, topographical mapping, ground control, ALTA/ASCM Land Title surveys, and reconnaissance surveys. BHI is industry-

known for our investment in efficient electronic data gathering tools that complement our skilled staff, allowing us to provide cost-effective, accurate, and appropriate data sets. From control surveying through aerial photography, photogrammetric digitization, and database editing, these innovations speed the final product to the client.

AVIATION/AIRPORT FACILITIES

BHI specializes in developing airport projects that open our communities to the world. As one of the few firms with a dedicated Aviation Group, we have in-house staff who work exclusively with Airport Managers, staff, and the FAA to plan, design, fund, and construct aviation and airport facilities. Stated simply, we know New Mexico airports. Our Aviation team members bring substantial experience in providing exceptional aviation planning, surveying, and engineering services to municipal airports around New Mexico. We help clients:

- Define effective master and action plans
- Obtain grant funding and administer these grants
- Develop and expand new and existing infrastructure
- Meet their complete design and construction phase service needs: surveying, engineering, construction bidding, construction observation and management, and post-construction activity through the grant close-out phases
- Maintain existing facilities: pavements, lighting, NAVAIDS, fencing, utilities, and related assets

EXPERT WITNESS IN A JUDICIAL AND/OR QUASI-JUDICIAL SETTING

Serving as an expert witness requires an in-depth knowledge of the subject matter along with credibility gained through years of experience. Senior BHI staff members are able to provide expert witness testimonials in their respective engineering fields. Because our senior staff continues to stay involved day-to-day on projects, we have a working knowledge of current standards and practices. This allows us to have the credentials needed to successfully provide expert witness services when required.

PROJECT MANAGEMENT

BHI follows a customized in-house Project Management Methodology to facilitate the successful delivery of our projects. By using a standardized process with quality checks throughout the project, we are better able to manage staffing, budgets, and project schedules. We manage our projects in our in-house developed BHTracker which keeps our whole team apprised of all information made available and the deliverables created. That information is available at all times throughout the project and can incorporate the City's project management staff as well. For the City, the importance of this methodology is the improved quality and cost control it provides, helping us meet project schedules and budgets more effectively.

This BHI-tailored approach provides our project managers a proven tool that helps ensure that client project goals are accomplished, the schedule is met, and the project delivered is the project expected. While each project presents a unique scope, schedule, budget, and deliverable, having defined steps that move our projects from negotiation to closeout provides our clients the assurance that they can expect a focus on effective project management from our company that is consistent from project to project.

CONSTRUCTION INSPECTION

For us, projects are only complete after the planning and design elements have been transformed into the final constructed product. At BHI, our engineering team understands all of these steps and provides a wide range of services during construction. We know that maintaining strong communication links between the contractor and owner, establishing and meeting schedules, providing a watchful eye during the construction of key elements, and resolving problems in a professional and expeditious manner are critical for success.

During construction management our team can provide a wide range of services that are critical during construction, including construction administration and inspection. One of these services from our team, that has a high return value for the City, is maintaining a full-time construction observer to inspect or observe the project progress for compliance with construction

documents to ensure the infrastructure is delivered in the condition and quality expected. Having this oversight enables the confidence that underground systems were installed in a high-quality workmanship manner, similar to the expectations for above ground systems which are easily visible. Without this oversight assurance, it leaves the door open to possible contractor errors or poor workmanship that degrade the final product.

ADDITIONAL SERVICES: MECHANICAL/ELECTRICAL SYSTEMS ENGINEERING

Our Mechanical and Electrical Group was organized to provide support services for projects involving either facility or municipal utility support. This is typically a combined engineering effort where we collaborate closely to prevent conflicts and to provide energy efficient systems for achieving or exceeding industry standards. Our mechanical engineering support extends from facility HVAC systems to natural gas distribution. Our electrical team has completed planning and design of electric distribution, roadway lighting, solar photovoltaic arrays, and SCADA, and has supported water and wastewater process facilities.

ADDITIONAL SERVICES: STRUCTURAL ENGINEERING

Our Structures Group produces structural designs for buildings, bridges, and civil infrastructure for a broad client base that includes municipal and county governments, state and federal agencies, Departments of Transportation, educational institutions, developers, contractors, and many others. BHI's structural engineers are skilled at producing safe and functional systems that complement their placement in the environment with aesthetic elements, colors, and design to meet each project's individual needs. Our structural team is adept at conducting studies of existing or proposed structures, taking into consideration safety, stability, constructability, cost-effectiveness, and performance life/life-cycle cost.

D. TYPICAL PROJECT SCHEDULE/TIMELINE

On-call task order schedules can vary greatly, depending on a number of factors such as the complexity of the scope, any permitting requirements, jurisdiction coordination, public involvement, etc. Upon receipt of a task order, Project Manager Tyler Hopkins and/or Assistant Project Manager Diana Gomez will prepare a scope and fee document to include a proposed schedule and manhour estimate for the City's ultimate approval. Any modifications to the schedule will be made with the City's approval.

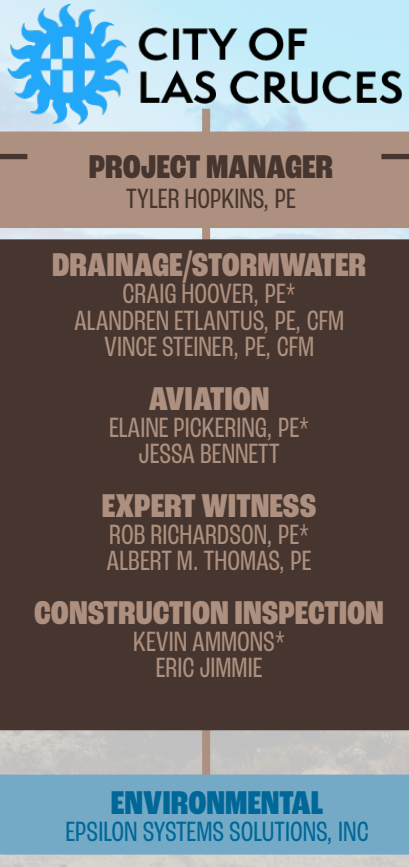
SAMPLE PROJECT SCHEDULE PREPARED FOR THE CITY OF LAS CRUCES UPON ISSUE OF A TASK ORDER.

2. PROJECT TEAM

Our depth of experience and breadth of capabilities – as witnessed by the completion of a significant number of diverse projects in a variety of locations –are continually expanding. Our proposed personnel for this contract are shown in our organization chart by competency, many of whom you are already familiar with as the same folks working with the City to complete task orders under our most recent on-call contract (further detailed in the next section). For this contract, we've added additional competency to the organization chart – Assistant Project Manager Diana Gomez – to ensure that our team continues to meet project design and delivery expectations. Qualifications information for our team members are provided in the following pages. Individuals marked with an asterisk are designated task leads in their respective competencies.

ORGANIZATION CHART



PROJECT TEAM

Below, you will find qualifications of our team. Each staff member is qualified to do the work proposed under this on-call contract, and each has the capacity to take on new task orders. As each task order may vary in expertise required, the precent of time each team member has available for a project will vary. A manhour estimate will be provided for City review upon issuance of a task order.

Name | Location | Qualifications	Years' Exp.	Expertise | Competence
Matt Thompson, PE | Las Cruces | PE NM #13868 | BS Electrical Engineering, BS Mechanical Engineering	32	Project Development and Management | Contract Oversight | Electrical and Mechanical Engineering | Municipal Infrastructure Planning and Design
Tyler Hopkins, PE | Las Cruces | PE NM #20677 | BS Civil Engineering	17	Project Development and Management | City of Las Cruces Familiarity | Multi-Disciplined Expertise | Federal and State Regulatory Requirement Familiarity
Diana Gomez, CAP | Las Cruces | Certified Administrative Professional: NM #93941001, Certificate Project Management | BS Computer Science	20	Project Development and Management | City of Las Cruces Familiarity | Federal and State Regulatory Requirement Familiarity | Grant/Funding Administration
Joseph Sandoval | Las Cruces	19	Specializes in Site Development | City of Las Cruces Familiarity

Carson Casey, EI | Las Cruces | EI NM #7718 | BS Civil Engineering	2	Water Resources Experience | City of Las Cruces Familiarity
Kurt Thorson, PE | Albuquerque | PE NM #13310 | BS Civil Engineering	32	Transportation Engineering Specialty | Comprehensive Roadway Technical Expertise | Well Versed in Current Industry Standards | Trained in Value Engineering
Roy Gibson, PE | Albuquerque | PE NM #18772 | BS Civil Engineering	22	Project Development and Management | Transportation Engineering Specialty | Comprehensive Roadway Technical Expertise | Brings a Whole-Project-Site Perspective
Josue Magaña, PE | Las Cruces | PE NM #25644 | BS Civil Engineering	10	Water Treatment Focused | Bio-Filtration Knowledge | Water Resources Expertise | Engineering Software Adept
Jacob Smelser, EI | Las Cruces | EI NM #7726 | BS Civil Engineering	3	Water Resources Experience | Water Treatment Experience | Utility Familiarity | City of Las Cruces Familiarity
Sandra Rodriguez | Las Cruces | Master Civil Engineering, BS Civil Engineering, BA Foreign Languages (Spanish)	1	Water Treatment Familiarity | Utility Familiarity | Safety Inspection Experience | Knowledge of Survey Equipment and Techniques
Hector Garcia | Las Cruces | MS Civil Engineering, BS Civil Engineering, Associate of Science	2	Water Treatment Familiarity | Utility Familiarity | Safety Inspection Experience | Knowledge of Survey Equipment and Techniques
Craig Hoover, PE | Albuquerque | PE NM #11848 | MS Civil Engineering (H&H), BS Civil Engineering	37	Water Resources Engineering | Project Management | Stormwater Management | Drainage Analysis
Alandren Etlantus, PE, CFM | Albuquerque | PE NM #19995, CFM NM #13-00335 | MS Civil Engineering (Hydraulics and Water Resources), BS Civil Engineering	17	Water Resources Engineering | Stormwater Management Experience | Water Resource Software Expertise | Project Management
Vince Steiner, PE, CFM | Albuquerque | PE NM #24319, CFM NM #17-00407 | BS Civil Engineering	14	Water Resources Engineering | Stormwater Management Experience | LID and GSI Design Experience | Proficient in Water Resource Software
Dean Christmas, PS | Las Cruces | PS NM #23788 | BS Surveying Engineering	12	Topographic Survey | Construction Staking | Cadastral Survey | Survey Project Management
Alan Benham, PS, PE, CFedS | Albuquerque | PS NM #15700, PE NM #14940, BLM/CFedS Certification #1013 | BS Survey Engineering, BS Civil Engineering	30	Boundary Law | Geomatic Surveying | Utility Survey | Right-of-Way | Design Survey
Elaine Pickering, PE | Albuquerque | PE NM #25713 | BS Civil Engineering	29	Broad Aviation Knowledge Base | Aviation Facility Design | FAA Standards Compliance | FAA Grant Applications
Jessa Bennett, PE | Albuquerque | PE NM #27905 | BS Civil Engineering	6	Aviation Facility Design | FAA Standards Compliance | FAA Software Familiarity
Robert Richardson, PE | Albuquerque | PE NM #10746 | BS Civil Engineering	42	Expert Witness Experience | Quality Control and Quality Assurance | Multi-Disciplined Engineering | Water and Wastewater Systems Design Expertise
Albert Thomas, PE | Albuquerque | PE NM #11476 | BS Civil Engineering	38	Expert Witness Experience | Traffic and Transportation Engineering | Quality Control & Quality Assurance Experience | Trained in Value Engineering
Kevin Ammons | Las Cruces	14	Construction Observation and Inspection | Materials Testing | Doña Ana County Familiarity
Eric Jimmie | Las Cruces | AS Mechanical Drafting	6	Construction Observation and Inspection | Materials Testing | Doña Ana County Familiarity
Sean Melville, PE | Albuquerque | PE NM #17400 | MS Civil Engineering (Structural Emphasis), BS Civil Engineering	28	Structural Engineering Specialty | Construction Design Knowledge | Civil Infrastructure Knowledge | Design and Analysis of Bridge Materials
Matt Bean, PE | Albuquerque | PE NM #23120 | MS Structural Engineering, BS Civil Engineering	19	Structural Engineering Specialty | Problem Solving and Client Coordination | Construction Specification Proficiency | Specializes in Facility Design

David Shields, CET | Las Cruces | NICET Certification Level 3: NM #101754, International Association of Electrical Inspectors #68393 | AS Architectural Technology	32	Project Management | Construction Observation and Inspection | Municipal Infrastructure | Certified Electrical Inspector
Evan Fleischer, EI | Las Cruces | EI NM #7109 | BS Civil Engineering	11	Municipal Infrastructure Support | Electrical Engineering | SCADA | City of Las Cruces Familiarity
Paul Schmittle | Albuquerque | Certificate Commercial Electrical Design, Certificate Electrical Design and Calculations, Certificate Commercial Electrical Systems	37	Electrical Design and Electrical Systems | Water and Wastewater Systems Design Expertise | City of Las Cruces Familiarity

PRINCIPAL OFFICER RESPONSIBLE FOR CONTRACT ADMINISTRATION

Matthew Thompson, PE | Senior Vice President
425 S. Telshor Blvd., Suite C-103 | Las Cruces, NM 88011
575.532.8670 | mthompson@bhinc.com

SUBCONSULTANTS (AS-NEEDED)

BHI maintains relationships with providers of specialty services such as those listed below should any task order require them. We also understand the City currently holds on-call contracts with specialty service providers as well. We will obtain approval of the use of any subconsultant on any task order prior to commencing work, or will work with one of the City's current contracted provider, as the City prefers.

Subconsultant	Qualifications
ENVIRONMENTAL Epsilon Systems Solutions, Inc. 205 West Boutz Road Bldg. 4, Suite 3 Las Cruces, NM 88005	Epsilon specializes in providing high-quality environmental compliance services. The firm's professional archaeologists, historians, architectural historians, biologists, National Environmental Policy Act (NEPA) specialists, and GIS personnel have served federal, state, municipal, and private project proponents in the Southwest since 2006. Epsilon's team provides sensitive plant and wildlife surveys, biological baseline studies, mitigation planning and monitoring (selection and implementation of best management practices), Clean Water Act 404 and 401 evaluations, wetland identification, and the day-to-day activities involved with threatened and endangered species program management.
GEOTECHNICAL COZ Engineering, Inc. PO Box 13331 Las Cruces, NM 88013	COZ Engineering will provide geotechnical services. Their capabilities include subsurface exploration and testing; foundation analysis and design; in-situ testing and performance monitoring; earth structures, slopes, and retention systems; dynamic analysis and evaluation; soil stabilization and ground improvement; pavement evaluation; and subgrade and material evaluation.
SUE Cobb, Fendley & Associates, Inc. 11427 Rojas Dr. Ste B El Paso, TX 79936	Since 1997, CobbFendley has provided SUE services for leading private and public sector clients including Departments of Transportation (DOTs), toll road authorities, utility companies, and various municipalities. The firm has provided SUE services on thousands of projects, working with clients and design consultant teams to assess and implement SUE strategies that eliminate utility conflicts and reduce costly construction delays.

LOCATION(S) OF OFFICE(S) WHERE THE WORK WILL BE PERFORMED, AND PERCENT OF WORK TO BE PERFORMED AT EACH

Work under this contract will be based primarily in our Las Cruces office. When required, certain specialized design work will be performed in our Albuquerque office. All of our offices are also equipped with video-conferencing capabilities that can be especially useful during project planning and design. Meetings can be conducted with out-of-town suppliers or contractors, government agencies, or our Albuquerque office staff and provide the feel of a face-to-face discussion without incurring undue travel costs or losing time waiting for participants to arrive in town. We anticipate that 75% of the work under this contract will be performed by our Las Cruces staff.

NAME, ADDRESS, AND NEW MEXICO REGISTRATION OF THE PROFESSIONAL RESPONSIBLE FOR AND IN DIRECT CHARGE OF THE WORK

All contract work resulting from this award will be led by Matthew Thompson, Principal-in-Charge (NM PE #13868), with Tyler Hopkins (NM PE #20677) acting as Project Manager in direct charge of the work. Matt and Tyler are both based in our Las Cruces office, and both are readily available to handle any and all matters associated with this contract. BHI's Las Cruces office is located at 425 S. Telshor Boulevard, Suite C-103, Las Cruces, New Mexico 88011. Matt and Tyler can be reached at 575.532.8670 or at mthompson@bhinc.com and thopkins@bhinc.com, respectively.

3. PERFORMANCE OF THE FIRM

AGGIE UPTOWN LAS CRUCES MASTER PLAN | NEW MEXICO STATE UNIVERSITY

BHI completed preliminary and final design efforts with construction phase support for the first phase of a larger 128-acre development near the New Mexico State University's Golf Course initiated as part of a master planning effort to expand NMSU's commercialization of significant local land resources. BHI was responsible for sitework, roadway, water, wastewater, and natural gas utility design and construction support. A traffic analysis was also performed to evaluate the impact of the development on the surrounding City and NMDOT transportation network. Extensive coordination with the City of Las Cruces and NMDOT was required to establish a comprehensive strategy of the ultimate buildout. BHI also coordinated with utility owners including City of Las Cruces, El Paso Electric, Century Link, Comcast, etc. in support of easement locations, platting approvals, and general design coordination.

Jose Lorea, Assistant Director
Project Development and Engineering
575.646.1234 | jlorea@nmsu.edu

MESQUITE-BRAZITO WASTEWATER COLLECTION SYSTEM, PH. 2 | LOWER RIO GRANDE PUBLIC WATER WORKS AUTHORITY

BHI provided several services to LRGPWWA for this project, including planning, design, and construction. When BHI got involved, the initial planning for the project, in the form of a PER, had already been completed by another consulting firm. The PER was used by LRGPWWA to acquire funding primarily from USDA for the entire project. However, the PER did not satisfy the vision of what LRGPWWA wanted in the expansion of their wastewater collection system. BHI became involved in and was responsible for amending the original PER and moving forward with a design that would maximize the use of gravity sewer collection pipelines and would minimize the use of individual residential grinder pump stations. As a result of the PER amendment, the funding that had been secured was not adequate to complete the entire project, and, as such, the project needed to be broken into two phases.

REFERENCE
Martin G. Lopez, General Manager
575.233.5742 ext. 1004
martin.lopez@lrgauthority.org

The first phase of design included 40,000 LF of gravity sewer main, 19,000 LF of sewer force mains, 4 lift stations, 160 epoxy coated manholes, SCADA integration into the existing and new wastewater facilities, provisions for dewatering, and property acquisition. Sewer service lines were designed from the main to the individual residential homes. As part of the individual sewer hookup, the process of decommissioning septic tanks was also included once the collection system became operational.

Throughout the design process, BHI was able to adapt to the changing needs of the client as additional areas to be served were added and designs had to be adjusted to meet requirements established by the permitting agencies. Communication and cooperation with the client and multiple government agencies, including USDA, NMDOT, NMED, EBID, and Doña Ana County, were critical in producing a successful project.

SOUTH CENTRAL WASTEWATER LIFT STATIONS REHABILITATION | DOÑA ANA COUNTY

The Doña Ana County South Central Wastewater Lift Stations Rehabilitation Project was to provide design and construction phase services to rehabilitate 18 of Doña Ana County's south central sanitary sewer lift stations. Most of the existing lift stations were constructed over 20 years ago and were in need of major repairs. The renovations would involve the removal and replacement of pump bases, corroded discharge pipes, and deteriorated plug valves and check valves. Other miscellaneous deteriorated equipment such as conduits, pipe support brackets, and coatings were also evaluated and replaced accordingly.

Due to the limited amount of funding acquired, the final overall number of lift stations that could be rehabilitated were limited. In order to establish a priority project list, BHI met with Doña Ana County staff to analyze each lift station condition, compare estimated scope of work, and produce an estimated cost for each. A priority list of lift stations with a high-low for base bid and bid alternate structure was created in order to bid and construct the most urgent lift station needs first.

This project has completed construction, and all lift stations have been re-commissioned. BHI was in constant communication with Doña Ana County staff and the contractor to make fast decisions on these additional components while lift station bypass pumping is in place. The intent of this project was to rehabilitate as many lift stations as possible, providing them with an additional 20-year lifespan. Although perhaps a more difficult engineering problem, restoration during full operation can be a critical cost savings versus full replacement, and in this example saved Doña Ana County significant funding expenditures.

roberthe@donaanacounty.org

SOUTH CENTRAL WASTEWATER TREATMENT PLANT PLANT-WIDE IMPROVEMENTS | DOÑA ANA COUNTY

BHI provided planning and design services for various facility upgrades at the main South Central WWTP facility servicing most of the area south of Las Cruces. These services included replacing failed process elements, such as the plant entrance works screening and grit removal systems, septage handling station, sludge handling, and main aeration system renovation. The entrance works originally part of the upper concrete structure has greatly deteriorated due to hydrogen sulfide gas exposure, and this project relocated these elements to a separate ground-level structure to enable proper screening and grit removal allowing a more accessible structure. All plant flows were re-routed around the facility and connected directly to the aeration basins. Other improvements involved cleaning and renovating the original aeration systems and renovating the aeration blowers and control valves. The solids handling process now utilizes both concrete drying beds as well as a belt-press machine. This belt press operation will be further improved by weatherizing the building enclosure housing the belt-press to allow easier solids dewatering operations during winter conditions.

REFERENCE
Robert Herrera, Parks & Facilities Manager | 575.525.6182
roberthe@donaanacounty.org

A second phase was recently added and is nearing construction completion. It is intended to replace the ultraviolet light effluent disinfection systems and relocate them to a more accessible location on the plant exterior. A recent discharge permit modification required that effluent dissolved oxygen levels be increased upon discharge to the Rio Grande. This will be accomplished with a cascade aeration structure at the final outfall point.

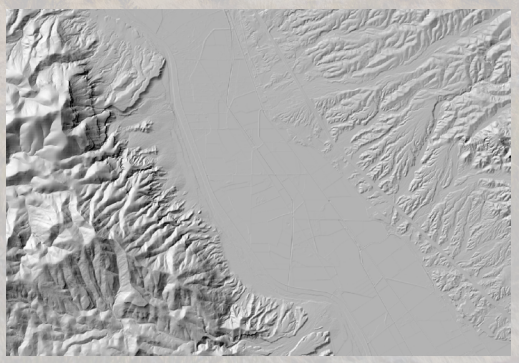
A third phase underway will be a full renovation of the low-voltage electric and SCADA systems to be more robust for to weather storm events and power outages the plant has experienced in the past. Redundant power system panelboards will be used to enable multiple source points and eliminate singe-point failure situations, while enhancing utility surge protection systems.

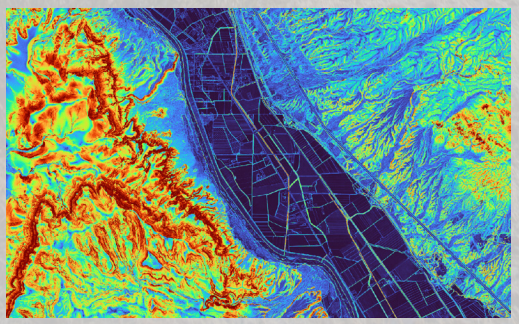
LIDAR AND ORTHOPHOTOGRAPHY | DOÑA ANA COUNTY

REFERENCE
John Gwynne, PE, CFM, Flood Commission Director | 575.525.5560
johngw@donaanacounty.org

Since 2004, the Doña Ana County Flood Commission has contracted with BHI to acquire 6" to 1' aerial imagery and process aerial orthophotography. In 2004, 2010, 2014, 2018, and 2023, BHI also acquired and processed aerial LiDAR. The projects on average spanned approximately 2,000 to 3,200 square miles in and adjacent to Doña Ana County. Data development spanned urbanized areas, agricultural lands, surface-irrigated riparian areas, plains, mountains, and drainage landscapes, with a goal of better understanding and managing storm water runoff. It was imperative that accurate terrain feature representation was achieved for the arroyos, ditches, earthen dams, and associated hydrology features. General highlights of the project work are listed below:

- Fixed-wing based airborne digital imagery over a 2,700 square mile area. Digital imagery collected with a Vexcel UltraCAM Eagle. Sensors were controlled via Vexcel UltraNAV FMS, with integrated GPS and IMU.
- Data captured under leaf-off conditions with no haze, clouds, dust, shadow, or other ground-obscuring conditions present. Ground features were free of excessive waters due to rain or snow. Capture occurred at an average flying height of 9,466' above mean terrain with sun angle more than 35 degrees from horizon to minimize shadows.
- Restricted airspace with White Sands Missile Range and International Border airspace coordination.
- Accuracy of 2.45' or better at 95% confidence. RMSE accuracy of 1.41'. Horizontal RMSE of the airborne GPS control data did not exceed 0.2 m; the vertical RMSE did not exceed 0.3m. RMSE of the adjusted IMU data did not exceed 0.3.m.
- 4-band (R,G,B,NIR) capture resampled to 32-bit 4-band orthophotography.
- Unprocessed radiometric data collected at 12 bit; final tiled uncompressed and compressed orthoimagery was 8 bit unsigned per band.
- Image mosaics included 4-band uncompressed GeoTIFF files and compressed 4-band ECW mosaics at a 15:1 optimal ratio.
- LiDAR collection density greater than or equal to 2 points per square meter.





ORTHOPHOTOGRAPHY DATA EXAMPLE DELIVERED TO DOÑA ANA COUNTY (LEFT). DEM AND COLORIZED RASTER DATA EXAMPLES (RIGHT).

- Project execution included logistics planning, flight planning, film aerial photography collection, photogrammetry, aerial triangulation, processing of digital elevation data, building footprint update collection, and GIS tile cache development. Production quantities included on average: 5,000 aerial frames, 75 flight lines, 1 terabyte of LiDAR production, and 2,835 individual square mile deliverable orthoimagery tiles.
- Development of building footprints from orthophotography source.
- Deliverables on USB hard drive include digital orthophotography archive files, classified LiDAR point clouds, survey report, ESRI tile cache and flight line index, and accuracy assessments.

CONSULTING & ENGINEERING SERVICES: DOÑA ANA COUNTY INT'L JETPORT | DOÑA ANA COUNTY

BHI has been serving Doña Ana County for decades and was re-selected in 2023 to continue as the on-call airport consultant for the Doña Ana County International Jetport. Featured airport projects are described below.

REFERENCE
William Provance, Airport Manager
575.644.2358 | williamp@donaanacounty.org

- **Reconstruct Runway 10-28** This project included reconstruction from 20,000-pound to 90,000-pound dual-wheel gear pavement strength, a new runway lighting system, new PAPI and REILs, and the temporary conversion of a taxiway to a runway during the construction period (the Jetport has a single runway). The construction was a FY 2019 project through the FAA and NMAD along with Capital Outlay funding. The design included two pavement material options: hot mix asphalt and concrete. The construction was completed under two contracts. The first was to convert the parallel taxiway to a temporary runway; the second was the reconstruction and the conversion of the temporary runway back to the taxiway. The work was completed on time and within budget.
- **Jetport Master Plan** The Master Plan, with approval of the ALP, followed the FAA process for planning. An air cargo study component was added after the original scope was negotiated as all parties (FAA, NMAD, County) realized the benefit of examining the potential for multi-modal operations at the Jetport to include air cargo operations. A second runway and upgrade of the Airport Reference Code was justified in the Master Plan Update. A second updated air cargo study for 737/757 sized aircraft has recently been completed (April 2023 BOCC presentation) as the Jetport has signed a lease with an air cargo operator to initially operate 737 aircraft at the Jetport.
- **Construct Taxiway D** Taxiway D at the Jetport will open an area for further development. The design addressed the tie-in to Taxiway A, including the installation of an electrical duct and taxiway edge lights, and a tie to an existing apron. The contract documents reflect the Doña Ana County specific construction SWPPP requirements, which, in turn, required a FAA Modification of Standards submittal. Design costs were controlled with a detailed scope of work and adherence to our internal processes. Construction costs were controlled by reviewing any Requests for Information (RFIs), having a knowledgeable on-site owner's representative, and maintaining communication between the owner, engineer, and contractor.

ADDITIONAL PROJECT EXPERIENCE WITH THE CITY OF LAS CRUCES

STORM DRAIN INVENTORY, PH. IV | CITY OF LAS CRUCES

This multi-phase project has focused on the creation of asset management data, procedures, and best practice for a survey-accurate geospatial storm water data framework to support future planning, prioritization, maintenance, funding, and general asset management within a GIS-enabled database. Tasks completed include:

- Loading existing storm water GIS features and attributes onto field survey data collectors for high accuracy mobile field inventory and data collection.
- Coordinating with City staff on GIS feature schema refinement phase prior to field data collection to ensure appropriate attribution and feature collection compatibility with the ArcGIS Local Government Information Model (LGIM).
- Using modern Extract, Transform and Load (ETL) workflows through FME® to facilitate field-to-office data management, quality assurance, and delivery.
- Performing research when necessary to make appropriate storm water line connections or to populate attribution from historic storm water utility system record drawings and as-built sheets in PDF format.
- Applying survey-grade RTK GPS survey methodology to collect all visible above-ground storm drain utility features of interest, such as manholes, inlets, etc.
- Field opening manholes to survey pipe number, location, and condition assessment for analysis and development of storm water network.
- Integrating or connecting all field-survey-grade 3D feature-based storm water data to ensure topologically connected GIS network.

RFP COMPLIANCE DECLARATION

RFP TITLE: **Civil Engineering Services**

RFP NO.: **23-24-050**

DUE DATE/TIME: **February 27, 2024 / 4:00 p.m.**

In compliance with the requirements of this RFP, I, the undersigned, offer and agree to furnish any or all materials and/or services to the City of Las Cruces within the time agreed.

I further certify that this company has not been debarred, suspended, or otherwise made ineligible for participation in Federal Assistance programs under Executive Order 12549 Debarment and Suspension as described in the Federal Rules and Regulations.

Receipt of Addenda Nos.: 1&2 is hereby acknowledged (where none received, place a zero in this space)

PROJECT ASSIGNMENT AGREEMENT

23-24-050 CIVIL ENGINEERING SERVICES

PROJECT NAME

Pursuant to terms and conditions of City of Las Cruces (CITY) Contract No. 23-24-050 dated June 1, 2024 between the CITY and Bohannan Huston, Inc. (ENGINEER), as amended and incorporated herein by reference, the City and Contractor hereby agree on this _____ day of _____, 20___, as follows:

1. In a satisfactory and proper manner, the ENGINEER shall perform SERVICES as proposed in response to the CITY's RFP No. 23-24-050 and ENGINEER's proposal as set forth in ATTACHMENT A attached hereto.

2. The estimated completion date is number days after a Notice to Proceed is issued by the CITY to the ENGINEER.

3. In consideration for the satisfactory completion of the work agreed to herein, compensation shall be made in the amount of $dollars.cents, plus NMGRT. Invoices issued by the ENGINEER shall be made monthly / upon completion of project with payment by the CITY being made within 30 days upon receipt of undisputed invoice.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Cobb, Fendley & Associates,Inc., of 3820 Academy Parkway North NE, Albuquerque, NM, 87109, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Cobb, Fendley & Associates,Inc. 3820 Academy Parkway North NE Albuquerque, NM 87109 ATTENTION: Sean Wolfe

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

Transmittal Letter

CobbFendley

February 27, 2024

City of Las Cruces
Bid Clerk

RE: RFP No. 23-24-050 | Civil Engineering Services

Members of the Selection Committee:

To support the City of Las Cruces (the City) in your continuing improvement of infrastructure, Cobb, Fendley & Associates, Inc. (CobbFendley) has assembled an exemplary and comprehensive team of professionals who combine a diverse base of experience with the appropriate depth of expertise. With an experienced, proactive Project Manager, a strategic and dedicated project team, and a deep commitment to the communities we serve, we feel that we have prepared a proposal that will meet and exceed your needs.

PROJECT LEADERSHIP. Our Project Manager, Chris Almy, PE, is a dedicated, qualified engineer focused on managing your projects to successful completion. As a current resident of Las Cruces, he is immediately available to respond to the City's project needs. Mr. Almy has experience working on similar projects and will work with the City to meet expectations and goals to enable project success. He holds not only the technical knowledge to serve the City, but also the experience to understand the nontechnical, public challenges that potentially surround civil engineering projects. Mr. Almy will be integrally involved in the design, development, bidding, and construction of projects.

PROJECT TEAM. The proposed team consists of specialized professionals in the field of civil engineering. Our firm's experience with multiple disciplines provides a business model that is designed to provide comprehensive design services. Details of key staff are provided throughout our proposal. The CobbFendley team is supported by local design engineers from CobbFendley's Mountain Region offices to provide additional resources for larger or quick-turnaround projects or multiple work orders. Additionally, CobbFendley has included the following subconsultant as part of the team to add additional strength and experience in supporting disciplines.

- **Armstrong Consultants (Armstrong)** – Airport Facilities Design Services

COMMITMENT. The project team proposed in this proposal has exhibited a history of dedication and commitment to the communities where we work. Members of this team have lived and worked in and around New Mexico for the entirety of their careers and have come to appreciate and understand the character and the uniqueness of New Mexico.

VALUE ENGINEERING. The CobbFendley team sees every project as an opportunity to save the City money. Through our in-house utility coordination, subsurface utility exploration, surveying, and utility design teams, CobbFendley routinely looks for value-engineering solutions to reduce costs and maximize benefit to the community during design and construction. Our goal is to deliver comprehensive design plans with executable options and cost-saving recommendations that will benefit the City and your end users. We look forward to the opportunity to further discuss our process, planning methodology, and project approach with you and your staff.

As the Senior Vice President, Region Manager, and person authorized to contractually obligate the firm, I, Sean Wolfe, PG, acknowledge receipt of all Amendments associated with this solicitation. We appreciate your time and consideration of CobbFendley's proposal and look forward to working with the City of Las Cruces to provide Civil Engineering Services.

Sincerely,

Cobb, Fendley & Associates, Inc.

Sean Wolfe

From Concept to Completion

A. TECHNICAL APPROACH OF ALL PROFESSIONAL, TECHNICAL AND CUSTOMARY SERVICES

CobbFendley and our teaming partners are uniquely qualified to address any civil engineering project tasked by the City. CobbFendley has successfully completed civil engineering projects for over 43 years, including numerous projects for cities and similar municipalities charged with providing safe and reliable transportation, drainage, and utility infrastructure. **CobbFendley also has the unique characteristic of providing in-house surveying, subsurface utility exploration, utility coordination (UC), and right-of-way (ROW) acquisition to complement our civil engineering design capabilities.**

Our Mountain Region offices enjoy access to the resources of the entire 630+ person firm so we can scale our operations to meet client needs. Our breadth of capabilities adds value to our ability to respond to the specific demands of each project and allows us to adjust the team as the project progresses, in consultation with the City.

CobbFendley has assembled a highly qualified and experienced team of professionals and technical support staff to serve the City's mission. Our team has extensive experience related to municipal infrastructure design with an emphasis on sustainable solutions applicable to the environment of southern New Mexico.

Beyond practical and environmentally conscious design approaches, we are also very familiar with regulatory requirements stipulated by the Multiple Separate Storm Sewer System (MS4) program, the National Environmental Policy Act (NEPA), and United States Army Corps of Engineers (USACE) Clean Water Act compliance requirements. By blending our technical competence and experience with a holistic approach to addressing southern New Mexico's unique arid hydrology and erosive soil conditions, CobbFendley can address and solve the City's infrastructure challenges.

PROJECT LEADERSHIP. As described in more detail in the subsequent section, **our team will be led by Project Manager Mr. Chris Almy, PE.** He has a proven track record of coordinating with City personnel in the development of scope of work, budget, and schedule that meets project goals. Mr. Almy's role on the City of Las Cruces' Professional Services contract will be to set deadlines, assign responsibilities and monitor/summarize progress of project. He will oversee project objectives and deliverables and will serve as liaison between the project team and the City staff.

CobbFendley's Project Principal / QA/QC Reviewer will be Mountain Region Municipal Department Manager Mr. Brad Sumrall, PE, who has designed, managed, and supervised New Mexico projects for over 31 years. As Project Principal, Mr. Sumrall will provide senior leadership and guidance to project teams overseeing contract compliance, delivery on scope, budget, and schedule, and allocation of resources to keep projects on track.

INTERFACE WITH THE CITY. The City of Las Cruces staff will be an integral part of our project team and will be included in all specific project assessments and key decisions. Project Manager, Mr. Almy is dedicated to accomplishing the City's objectives. He understands the importance of well-timed coordination with the appropriate City personnel and welcomes your valuable input. **Mr. Almy is a Las Cruces resident and will be available for regular in-person or virtual progress and coordination meetings, as well as emergency meetings as required.** It is our custom to have meetings when they are necessary to accomplish project objectives. We will provide meeting agendas and minutes. In addition to coordination meetings, CobbFendley will provide weekly or bi-weekly project progress updates to keep City staff informed on project progress, upcoming planned activities, needs from the City, and outstanding challenges.

COST-EFFECTIVE DESIGN AND CONSTRUCTION. We understand that our job as a consultant is to provide the City of Las Cruces with cost-effective solutions and designs to meet the City's needs. CobbFendley will define the approach to the plans and contract documents, as well as the specific techniques that could be implemented in construction. A few examples to be considered and studied during the design phase include:

- Alternate pavement types and/or temporary pavement
- Temporary striping (for travel lanes and bike lanes)
- Recycled base, water quality control choices (rain gardens, sedimentation/filtration ponds, and vegetative filter strips)
- Storm sewer versus roadside ditches (in rural areas)

Although this list is not complete, each solution may impact projects differently with respect to public acceptance, construction schedule, and project costs. CobbFendley evaluates these to develop cost-effective, feasible options, while promoting the health, safety, and welfare of the public. We maintain an extensive library of record bids for a variety of

Evaluation Criteria No. 1 (Technical Approach)

projects and site conditions for use in developing unit prices. We also have professionals on staff with a construction background who maintain a network of resources to provide pricing based on current market costs. CobbFendley will coordinate with contractors and suppliers with experience on projects similar in size and scope to validate the estimate based on current construction rates and project challenges. Impacts to the market supply chain, such as weather, increasing costs of raw materials and local construction costs, or oil market shifts will be considered when developing construction cost estimates.

QA/QC PROGRAM. Last minute rework due to poor communication is one of the most common sources of errors. Communication will start with sharing the scope of work with all personnel directly involved in the design of the project. The Engineering and Production Teams will have the tools to do their best work if they understand the overall goal of the project and how their work affects other disciplines. The communication continues with informal checks and visits to the designers by the Team Lead and the Subcategory Leads. This gives the designer a chance to ask questions and an opportunity for the manager to see that the design is proceeding in the direction intended. In addition, prior to each submittal to the City, a formal internal review will be conducted by a senior engineer following CobbFendley's established QC protocol.

QA / QC Procedure
Production Team ✓ Produces exceptional quality work following firm / client standards for quality and compliance
Team Task Leaders ✓ Produce exceptional work ✓ Verify compliance with firm / client standards ✓ Implement project Quality Control Plans
Project Manager ✓ Coordinates QA/QC activities, meetings, and schedule ✓ Overall project responsibility ✓ Provides high-level technical review
Technical Reviewer ✓ Provides detailed technical review ✓ Gives feedback to QA/QC Manager for follow-up
QA/QC Manager ✓ Directs QA/QC activities ✓ Review QA/QC Plans ✓ Back-checks calculations and standards compliance
Project Principal ✓ Provides final review of overall project ✓ Provides resources to implement QA/QC procedures

Our markup and review process includes the initial review, but also emphasizes the need to backcheck the comments and coordinate with the Engineering and Production Teams, then verify that comments were addressed before releasing the plans for City submittal. The time for this will be built into the project schedule. Comments will be addressed prior to the formal submittal to the City. As comments are received from the City and other reviewing agencies, if applicable, we will clarify conflicting or unclear comments and a backcheck of those comments will be incorporated into the next internal review.

Constructability reviews will also be conducted at regular intervals during the design process. These will be conducted by subject matter experts and managed by Project Principal / QA/QC Reviewer Mr. Brad Sumrall, PE, who will not only look for issues with the construction phasing such as drainage, staging, adequate room for traffic, temporary shoring and the type of traffic control required; but will also look for ways to reduce the cost of the project, the methods of material measurement and payment, the types of pavement, and other options will be examined to determine if there are more efficient methods or less costly materials that will provide the same quality product.

SUBCONSULTANT ROLE IN MANAGEMENT STRUCTURE. Our team is comprised of CobbFendley staff and subconsultants to form a cohesive design team. We have strategically selected subconsultants that have worked previously with our staff; thus, the level of expectation is known and allows our team to work seamlessly and efficiently from day one. Assignments to subconsultants will involve the development of a detailed scope of work, budget, procedures, and design schedules that assimilate into the overall project scope.

B. MAJOR TASKS TO BE ACCOMPLISHED

CobbFendley's experience with multiple on-call contracts and a variety of City engineering services has resulted in the development of the tools and skills needed to develop an approach to managing the scope, schedule, and resource needs for specific projects. With each project assignment, Mr. Almy will provide a detailed scope of services tailored specifically to the subject project. As the work plans will differ for various types of projects in each category anticipated under this contract, we have developed a five-phase project work plan that can and will be easily adaptable for each project. Having this base work plan and templates established to develop person-hour estimates, along with Project Manager Chris Almy's extensive experience with engineering design projects in the Dona Ana County and Las Cruces areas,

Evaluation Criteria No. 1 (Technical Approach)

provides our team a framework for quick understanding and turn-around of project scopes and estimates.

Our team will approach, develop, and manage assigned projects with the **five-phase work plan** *outlined below*, applying our experience and knowledge of various challenges for each type of project as outlined in the pages to follow.

FIVE-PHASE WORK PLAN

PHASE 1 - PROJECT SCOPING AND PLANNING

- Meet with the City staff to understand project intent, limitations, opportunities, staff requirements, design criteria, prioritization of project scope, stakeholders, and schedule
- Develop draft scope
- Present and negotiate scope with City staff
- Develop fee and schedule

PHASE 2 - PRELIMINARY ENGINEERING AND DESIGN

Preliminary Phase:

- Fact-Finding – conduct field investigations, perform existing utility research, identify environmental constraints, evaluate alternative materials and construction methods, and identify permitting requirements
- Conduct preliminary meetings with other permitting agencies and stakeholders
- Identify and analyze alternatives
- Develop preliminary construction cost estimates, sequencing, and schedule
- Identify preliminary ROW requirements
- Develop preliminary design layouts and calculations
- Present findings and recommendations to the City

Design Phase:

- Conduct surveying to determine existing field conditions and assess right-of-entry, as needed
- Conduct subsurface utility exploration investigations, as needed
- Perform geotechnical and/or environmental studies, as needed
- Develop 30% detail construction plans
- Coordinate with utility owners and other permitting agencies
- Prepare executive summaries addressing H&H studies, scour analysis, modeling, traffic studies, roadway design, site drainage and grading, water/wastewater routing, sizing, material types, pump/lift station/tank site location, sizing, etc., as applicable
- Develop 60% detail construction plans and prepare special specifications
- Prepare construction cost estimate, project sequencing, and schedule
- Develop 90% detail construction plans and prepare bid documents
- Prepare Contractor qualification requirements
- Prepare final permits for construction as needed (USACE, NMDOT, Railway, etc.)
- Develop 100% detail construction plans and prepare final project manual for bidding

PHASE 3 - BID PHASE

- Provide construction plans and project manual for distribution
- Conduct a pre-bid conference
- Respond to Contractors' pre-bid inquiries
- Issue addenda, as necessary
- Attend bid opening
- Analyze bid tabs
- Check Contractor references
- Provide recommendation of award
- Assist in execution of contracts

PHASE 4 - CONSTRUCTION ADMINISTRATION PHASE

- Issue conformed documents
- Conduct pre-construction conference
- Conduct periodic site visits to review progress and character of the work
- Review and make recommendations regarding Contractor pay estimates
- Review and make recommendations regarding Requests for Information (RFIs)
- Review and make recommendations regarding shop drawing submittals
- Review and make recommendations regarding Change Orders
- Interpret plans, specifications, and contract documents as required
- Conduct final walk through and punch list
- Prepare record drawings
- Prepare engineer's concurrence letter certifying that the project was constructed in accordance with approved plans and specifications
- Assist the City with contract close-out

PHASE 5 - WARRANTY PHASE

- Conduct 11-month walk through and punch list
- Coordinate with the City and the Contractor to correct project deficiencies, if encountered

Evaluation Criteria No. 1 (Technical Approach)

C. DETAILED STATEMENT OF SERVICES TO BE PROVIDED UNDER EACH TASK

CobbFendley has full, in-house civil engineering design capabilities, from the planning phases through plan production to project construction. Our capabilities include all the core areas of general civil engineering, surveying, hydrologic analysis and hydraulic design, roadway design, and additional support services such as surveying and subsurface utility exploration, among others. As a full-service civil engineering firm with a complement of extremely qualified teaming partners, CobbFendley brings the technical skills, experience, relationships and problem-solving ability to address the City's needs. We firmly believe that the most effective solution is carefully thought out in cooperation with our client which avoids lost opportunities to capitalize on efficient, cost-effective, and sustainable solutions.

TRANSPORTATION FACILITIES DESIGN. CobbFendley's transportation engineering experience includes new construction, pavement rehabilitation, street widening, and complete reconstruction projects for rural municipalities and NMDOT. Many transportation projects will also include design and rehabilitation of the stormwater collection system, replacement of the municipal water and wastewater lines, relocation of franchise utilities, and pedestrian improvements, such as landscaping, sidewalks, access ramps, and street lighting.

Our roadway engineers provide an array of services to improve all types of surface transportation systems including city streets, county roads, highways, tollways, and transit facilities in rural settings. From the initial studies and planning phases to the final construction administration, CobbFendley has experience providing the anticipated roadway design services for this contract:

- Complete Design Packages
- Route Studies and Schematic Design
- ADA Compliant Pedestrian and Bicycle Facilities Design that meets the requirements of NMDOT PROWAG and FHWA Standards
- Roadway Design
- Constructability and Safety Reviews
- Pavement Design/Rehabilitation
- Public Involvement
- Feasibility Studies

CobbFendley has extensive DOT experience, specifically using Bentley OpenRoads, and will incorporate the City's standards/specifications when designing roadway projects. Our project manager was recently certified to support and comply with the NMDOT Tribal/Local Program Authority requirements to leverage Federally funded projects.

STORM DRAIN DESIGN. CobbFendley has experience with a multitude of stormwater, environmental, and erosion control projects, as part of larger utility and roadway projects and as standalone projects. The CobbFendley team is familiar with agency coordination (FEMA, USACE, EPA, NMED, NMDOT), design requirements, and permitting, and will deliver projects that are in compliance with local, state, and federal regulations.

CobbFendley uses design software such as 2D XP-SWMM, HEC-RAS, HEC-HMS, StormCAD, and GeoPak to perform drainage analysis. The project team will gather essential field data and develop a preliminary plan for review, collect feedback from City staff and prepare a report with recommendations and implementation schedule, prepare construction plans for drainage improvements, and make presentations to City staff, City Council and/or the public, as necessary. Our drainage analysis and design services include:

- Storm Sewer System Design
- Roadside Ditch Design
- Channel Design
- Culvert Design
- Detention Pond Design
- Water Quality Control Design
- 1D and 2D HEC-RAS/HEC-HMS Modeling
- 1D and 2D XP-SWMM Modeling

UTILITY DESIGN. CobbFendley has engineered numerous natural gas, water, wastewater, and natural gas improvement projects for public and private clients. Our team has assisted many municipalities and utility districts with the design and construction of water system upgrades, including new and rehabilitation of water lines, ground and elevated water storage tanks, water plant design, rehabilitation, and expansion (potable and reclaimed), water supply wells, water distribution system design, water system modeling, water quality analysis, pump stations, elevated storage tank design and rehabilitations, and ground storage tank design. Our team also has extensive experience in wastewater infrastructure design and evaluation, including wastewater treatment plant design, rehabilitation, and expansion, gravity sewer collection system rehabilitation assessment and design, wastewater system analysis, force main design and rehabilitation, lift stations, wastewater pump stations, outfall permitting, and renewing and amending treatment plant permits. CobbFendley has extensive expertise in all engineering aspects of gas transmission

Evaluation Criteria No. 1 (Technical Approach)

pipeline and distribution engineering, including design of transmission pipeline, distribution gas mains, Horizontal Direction Drills (HDDs), regulator stations, meter stations, mainline valves, odorizers, compressor stations, and other gas infrastructure.

Our expertise also includes impact fee studies, CIP planning studies, feasibility studies, and forensic investigations. Our team is experienced in open-cut trenching, as well as various trenchless construction technologies, including conventional bore and jack, tunnel boring, horizontal direction drilling, sliplining, CIPP, and pipe bursting. We are familiar with the agency coordination (NMED, EPA), design requirements, and permitting required for gas, water, and wastewater projects. CobbFendley's expertise affirms that projects are in compliance with all local, state, and federal regulations.

SITE DEVELOPMENT DESIGN. CobbFendley has been involved in hundreds of private, commercial and government site development design and development projects. This experience provides us the expertise to be able to provide the City with any site development design (grading and drainage) or plan review services for new buildings, parking lots, driveways, water, wastewater, or stormwater facilities and drainage and/or water quality detention facilities.

SUBSURFACE UTILITY EXPLORATION. In addition to identifying public utilities based on records and/or surface features, CobbFendley also has extensive experience performing subsurface utility exploration Quality Levels B and A (in accordance with ASCE Standard Guideline for Investigating and Documenting Existing Utilities, ASCE/ UESI/CI 38-22) throughout the surrounding areas. As design progresses past 30% CobbFendley has the capability to upgrade the quality of the utility information by performing field designating/locating (Quality Level B) activities and mapping these field verified utilities to the project control datum. With this more accurate utility information (horizontal accuracy to ±1 foot), the design team can make minor adjustments to avoid costly relocations and possible schedule delays. After 60% design and utilizing a utility conflict list identifying potential vertical conflict locations, CobbFendley can again upgrade the utility quality information by performing utility test holes (Quality Level A) at critical locations.

CobbFendley's work history was built on private utility relocations. Our utility engineering capabilities are marked by strong relationships with local utility owners, former DOT/private utility company staff, and in-house utility specialists available to mobilize quickly. When planning begins on infrastructure projects, inaccessible or incomplete records of utility facilities can complicate the design process. CobbFendley's UC and subsurface utility exploration services are key tools for setting up communication lines among the involved organizations and identifying potential conflicts.

- Non-destructive Vacuum Excavation
- Radio Detection Utility Line Field Investigation
- Video Inspection of Underground Facilities
- GIS Compatibility
- Mapping of Gravity Sewer Pipes
- 3D Design Modeling and Visualization

CONSTRUCTION CONTRACT ADMINISTRATION. Our staff has worked on public and private sector construction projects ranging from underground utilities and communication systems, streets and highways, bridges and grade separations, elevated and ground storage water tanks, stormwater pump and sanitary lift stations, water and wastewater treatment facilities, stormwater detention facilities and outfall channels.

CobbFendley can provide any level of service to meet the City's needs, including the following:

Management:

- Pre-Construction Meetings
- Construction Administration
- Scheduling and Cost Control
- Change Order Evaluation,
- Negotiation and Implementation
- Dispute Resolution/Claims Evaluation
- Project Closeout and Certificates of Completion
- Warranty and Maintenance Bond Monitoring

Inspection:

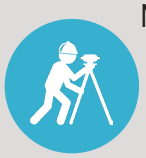
- Site Observation/Inspection
- Observation and Documentation
- Existing Asset Condition Assessments
- Quality Assurance
- Substantial completion and punch list
- Final completion

Review:

- Constructability Plans
- Contract Documents
- Submittals
- Material Certifications
- Shop Drawings
- Pay Applications
- Requests for Information (RFIs)
- Traffic Control Plan
- Evaluation and Conformance

Evaluation Criteria No. 1 (Technical Approach)

CobbFendley provides experienced Construction Management staff and resources, serving as our municipal client's agent and a single point-of-contact throughout each project's life. We pride ourselves in taking a hands-on approach, while maintaining responsibility for all aspects of construction activities involved. Success of the construction management project is driven by CobbFendley having open lines of communication with the City, Design Engineer, and Contractor, while monitoring the project schedule's critical path, thereby allowing tasks to remain on time and within budget, while maintaining the level of quality.



LAND SURVEYING ACTIVITIES. CobbFendley's survey experience includes thousands of projects for clients throughout New Mexico. Our experience includes land title, boundary, topographic, tree, horizontal and vertical control networks, engineering design, American Land Title Association (ALTA), construction staking, and utility surveys. We use innovative techniques including aerial photogrammetry, ground-based laser scanning, rapid static and static GPS, and electronic field books to provide our clients with cost-effective solutions to their surveying requirements. Our team is experienced in using TMOSS and is also able to provide the City with specialized 3D mapping services, including terrestrial, aerial, and mobile LiDAR, photogrammetry, and drone-based aerial imagery.

CobbFendley's survey team has provided survey support for multiple highway design projects, utility corridor projects, private development projects, and various on-call projects in multiple municipalities and utility districts. Our team uses innovative ideas along with cutting edge survey equipment to keep project budgets on task while still providing accurate survey information. For PS&E purposes, GIS can define a roadway network (spatial data that graphically represents the geometry of the roadways, i.e., an electronic map) and its geographically referenced component attributes (road, bridge, and highway data, etc.). Our surveying services include:

- 3D LiDAR Scanning (Terrestrial, Mobile and Aerial)
- UAS/Drone Services
- Construction Staking
- Land Title
- Boundary Surveys
- ROW Surveys / Easement Descriptions
- Subdivision Platting
- Route and GPS Surveys
- Topographic/Tree Surveys
- Channel Cross-Sections and Profiles
- As-Built Surveys
- Design Surveys
- Project/Primary Control Surveys
- Horizontal/Vertical Control Networks
- American Land Title Association (ALTA)

PREPARATION OF DRAINAGE REPORTS AND FEMA FLOOD STUDIES. Flood control is an important part of ensuring the safety of a community. Our team includes Certified Floodplain Managers who are accomplished hydraulic analysts with direct applicable experience preparing and completing Conditional Letters of Map Revision (CLOMR) and Letters of Map Revision (LOMR) submittals. Our projects range from evaluating existing floodplains, to demonstrating design impacts that modify floodplains for residential and commercial development. Our modeling capabilities include:

- 1D and 2D HEC-RAS/HEC-HMS Modeling
- 1D and 2D InfoWorks ICM Modeling
- 1D and 2D XP-SWMM Modeling

AIRPORT FACILITIES DESIGN. To verify continuity of project objectives, CobbFendley has included Armstrong on our team to lead airport facilities design services. Armstrong specializes exclusively in airports and typically completes 30 to 40 FAA Airport Improvement Program (AIP) funded planning, design and construction administration projects each year. The annual AIP process begins with Aviation Capital Improvement Program (ACIP) meetings, where the City will identify the projects they would like to see over the next five years and identify their top priority for the following year. Once completed, the ACIP is printed, signed, and forwarded to the FAA for the file.

After the ACIP meeting, the next deadline is for environmental clearance. Every FAA-funded project must be cleared for environmental concerns before a grant is issued. Armstrong will prepare the documentation and send it to the City for review and signature. Once the document is executed, Armstrong will forward the document to the FAA and get concurrence to proceed. The projects identified on the ACIP should be cleared environmentally via a Categorical Exclusion though the Environmental Protection Specialist and the FAA may require cultural and biological investigations done to ensure nothing of significance is found.

The next step in this process is submitting the grant application, which must be submitted to the FAA before the end of the calendar year. Armstrong will prepare each grant application for the City to expedite the signing and submission to the FAA. At the design phase, the project proceeds with project formulation, the scope of work is finalized, the project proceeds to initial design phase, and then the final design phase.

Evaluation Criteria No. 1 (Technical Approach)

After design is complete, the project enters the construction phase. Armstrong will coordinate with CobbFendley to establish a contract and facilitate the NTP. After NTP, Armstrong will administer construction administration and inspection duties. Armstrong will monitor construction progress to verify that contractors are constructing the project as intended. Once construction is complete, Armstrong will conduct a final inspection, then assist the City in closing out the project.

EXPERT WITNESS. Professional Engineers of CobbFendley and our teaming partners have the technical expertise to provide expert witness testimony for the City. Senior personnel have provided expert witness support related to judicial actions and routinely provide public outreach support when required. Mr. Martinez of Zia has also provided expert witness testimony for projects related to groundwater and soils contamination and has supported several clients in depositions and expert witness roles related to environmental compliance and drainage issues.

PROJECT MANAGEMENT. Project Manager Mr. Chris Almy, PE, will develop a Project Management Plan (PMP) to provide all team members with a single document of relevant project information. The PMP includes the scope of work, team member roles (internal and subcontractors), budgets, design schedule, QA/QC Plan, Risk Management Matrix, Change Management Plan, Issue Log, guidelines for design file management, and invoicing requirements. Having these plans in place makes us better prepared to keep focused on the big picture goals and ready to handle unforeseen circumstances, which could surface during project development.

CONSTRUCTION INSPECTION. CobbFendley maintains a dedicated Construction Management Department with more than 100 years of combined construction observation and inspection experience. We have 19 construction inspectors highly experienced in managing various construction phase services, including pre-construction meetings, public meetings, Contractor requests for information, change orders, Contractor invoice approval, construction site visits, and preparation of record drawings once the project is complete. They are available to provide services on a wide variety of public works projects, including utility, roadway, and drainage. Our highly qualified inspectors have been well trained and are certified in a wide variety of categories. These categories include, but are not limited to, American Concrete Institute (ACI) and Associated Contractors of New Mexico Transportation Technician Training and Certification Program (TTCP).

D. PROPOSED PROJECT SCHEDULE

The CobbFendley team believes the schedule is one of the most important factors in project success. The schedule will establish milestones for deliverables and allow the City to provide input on project timelines. Our history of completing deliverables on schedule is one of the many results of our project success over the years. CobbFendley commits to meeting the schedule deadlines that will be developed in the scoping phase and is dedicated to meeting the timelines contained in the contract documents and included as part of the initial project development with the City's Project Manager. Our Project Manager, Mr. Almy, will develop a detailed production and coordination schedule at the onset of the project, including bid and construction phase services. The schedule will include resource allocations to determine the required commitments of team members to meet the schedule. In the event of necessary schedule recovery (or should the City decide to expedite the design process), the CobbFendley team is nimble and responsive and has the ability to pull additional resources from the deep Company team to meet design schedules. Our Project Principal, Mr. Sumrall, is committed to the success of City of Las Cruces projects and will assign resources as required to meet project schedules.

The following project schedule represents sample activities proposed that will be accomplished by the CobbFendley Team. A schedule for individual task orders issued will be developed upon notice to proceed. Schedules can be expedited when needed due to CobbFendley's depth of staff and our ability to self-perform requested services. Our lean team structure equates to simplified management, coordination, and quality control.

Evaluation Criteria No. 2 (Qualifications/Competence)

ABOUT THE FIRM

CobbFendley was founded on April 1, 1980, and is an employee-owned consulting firm providing civil engineering and land surveying services for nearly 43 years. Our staff of more than 630 employees brings an unmatched level of expertise and experience and is committed to serving the communities where we live and work. CobbFendley's diverse team of professionals is comprised of engineers, designers, surveyors, ROW agents, utility specialists, technicians, and support personnel.

Our in-house services include road design, sidewalk and ADA design, drainage design, structural/bridge design, hydrologic and hydraulic evaluation, flood disaster protection and recovery support, traffic engineering, site design, UC and wet/dry utility design, subsurface utility exploration, surveying and mapping, and ROW acquisition, among others.

As a client-oriented firm, CobbFendley believes that the principal factor behind our nearly 43-years of success and growth is our dedication to producing quality, timely work. CobbFendley has established and will continue to maintain confidence with our clients by exhibiting sound management, offering unrivaled professional surveying experience and capabilities, producing quality products, and adhering to high standards of professional ethics using local staff committed to working in their own communities.

UNDERTAKING RESPONSIBILITIES ASSOCIATED WITH A POTENTIAL PROJECT

CobbFendley's project leadership will be supported by a qualified team of engineers and surveyors to bring a diverse array of technical expertise. The CobbFendley team will report to the Project Manager. While the Project Manager will coordinate personnel and resources needed for each assignment, the Project Principal will have the ultimate responsibility of dedicating appropriate staff to the project and coordinating their availability should additional resources be required.

PROVEN LEADERSHIP. Project Manager, Mr. Chris Almy, PE, has 17 years of civil engineering experience performing utility designs and coordinating with multiple reviewing, permitting, and funding agencies on projects throughout New Mexico. Mr. Almy is supported by engineers and experts in the fields of water supply and distribution, wastewater collection, hydraulic modeling, drainage, surveying, subsurface utility exploration, UC, land acquisition, bid administration, construction management, and other technical services. Mr. Almy will provide senior leadership and guidance to project teams overseeing delivery on scope, budget, and schedule, and allocation of resources to keep projects on track.

CobbFendley's Project Principal / QA/QC Manager is Mr. Brad Sumrall, PE. Having designed infrastructure projects throughout New Mexico, Texas, California, and Utah since 1993, Mr. Sumrall has a keen understanding for the requirements to build a successful project and navigate the design, funding, and coordination processes. As Project Principal, Mr. Sumrall will provide senior leadership and guidance to project teams overseeing contract compliance, delivery on scope, budget, and schedule, and allocation of resources to keep projects on track.

CAPACITY TO HANDLE MULTIPLE PROJECTS. CobbFendley can address multiple projects and deliverables when competing demands occur. We facilitate clear communication and schedule requirements through a weekly meeting where all active projects are evaluated and discussed to verify that we are maintaining schedules, budgets and deliverables as described in our executed scope of work. We understand that in some cases, funding constraints and governing body expectations can sometimes require accelerated schedules and deliverables. Should such conditions arise, our project management team confers to address schedule conflicts to reallocate resources and leverage other expertise from within CobbFendley. We have successfully addressed these conditions recently due to client demands and changes in key personnel.

PROJECT BALANCING PROCESS. Our New Mexico-based engineering team successfully manages and delivers numerous projects continuously on a daily basis. Our experienced project managers work diligently to manage schedules, staff resources, and client expectations. Our project execution and design processes incorporate the following activities:

- Establish a clear definition of project objectives in collaboration with the City so that the appropriate data is collected to support a functional and sustainable design.
- Prepare a PMP to outline and define the project scope, schedule, and budget for clear enunciation of what, why, how, when, and who is involved with project execution.
- Collect required base data including topographic, ground features, existing utility information and reference reports which form the design foundation. Our thorough data collection efforts facilitate successful engineering projects by eliminating successive field visits to obtain additional data. We also strive to provide additional information to make the engineer's job easier with the objective of designing an innovative and cost-effective solution.
- Instill a "Plan the Work/Work the Plan" mindset and process. This serves to keep our team on track, the client well informed, and produces quality deliverables for the City's benefit.

Applying these practices consistently, along with clear and effective communication, allows us to balance and maintain efficient workflow and schedules while maintaining quality.

Evaluation Criteria No. 2 (Qualifications/Competence)

YOUR DEDICATED TEAM

A. NAMES OF KEY PERSONNEL ASSIGNED TO PROVIDE SERVICES

Team Member & % of Time Assigned	Areas of Competence	Description of Experience
 Brad Sumrall, PE Project Principal *NM PE #14086* **Time Assigned: 25%**	• 31 years of civil engineering project management experience • Successfully delivered projects for numerous municipalities throughout the State of New Mexico	**Strengths and Qualifications:** Mr. Sumrall has 31 years of professional water resources, land reclamation, development and master planning experience. With a background in natural resource management and civil engineering, he strives to incorporate sustainable design practices into all his projects for the benefit of the environment and the end user. Specific areas of expertise include potable water and waste water conveyance and retrofit, reclamation and stabilization of disturbed land including mines, roadways and natural waterways, hydrology and hydraulics, MS4 compliance and storm water best management practice design and evaluation, and pedestrian trails. **Project Experience:** Dam Maintenance Plan, *City of Las Cruces, NM* • Master Drainage Plan, *City of Las Cruces, NM* • Calabacillas Arroyo HEC-HMS, *SSCAFCA, Rio Rancho, NM* • JP Shawver Park Handball Court, *City of El Paso, TX* • Striping Project, *City of Alamogordo, NM* • Eagle Nest Lake State Park Campground Improvements, *New Mexico Energy, Minerals, and Natural Resources Department (EMNRD) - State Parks Division, Colfax County, NM* • Persons Access Road, *PNM, Eddy County, NM* • Infrastructure Improvements, *Pueblo of Laguna, NM* • IDIQ Contract, *Indian Health Service, Albuquerque, NM* • Pedestrian Multi-Use Trails, *Pueblo of Laguna, NM* • On-Call Statewide Drainage Bureau, *NMDOT, Statewide, NM* • Sanitary Sewer Rehabilitation, *Pueblo of Laguna, NM* • Cabezon Multi-Family Development, *JLM Financial Partners, Rio Rancho, NM* • Loop 375 Waterline Relocation, *TxDOT, El Paso Water Utilities (EPWater), El Paso, TX* • Alameda Drain Trail Master Plan, *Bernalillo County Public Works, Albuquerque, NM*
 Chris Almy, PE Project Manager / Professional Responsible for and in Direct Charge of the Work *NM PE #19120* **Time Assigned: 75%** ***Las Cruces Resident***	• 17 years of civil engineering project management experience • Experience on projects located in and surrounding Doña Ana County	**Strengths and Qualifications:** Mr. Almy has 17 years of civil engineering experience in the field of water resources. He specializes in subsurface utility exploration, UC, water supply/distribution, wastewater collection, decentralized wastewater treatment, drainage engineering, temporary erosion control, and stormwater pollution Prevention Plans (SWPPP). He has performed numerous engineering studies and prepared plans, specifications and estimates for projects throughout New Mexico. As Project Manager, Mr. Almy brings extensive experience providing technical guidance to our design teams ensuring contract compliance, delivery of scope, budget, schedule, and appropriate resource allocation. He excels in technical writing, project and team management, and agency coordination. **Project Experience:** Drainage Detention Basin, *City of Alamogordo, NM* • South Fork Arroyo Improvements, *City of Las Cruces, Dona Ana County, NM* • Striping Project, *City of Alamogordo, NM* • Vista Real Wastewater System, *Vista Real Mobile Home Community, Las Cruces, NM* • Buckeye & Iron Street Drainage Improvements, *City of Deming, NM* • Emergency Water Line Connection, *Picacho MDWCA, Dona Ana County, NM* • Johnny's Septage Facility, *Johnny's Septic Tank Company, Mesquite, NM* • F&A Septic System Design, *F&A Dairy Products Inc, Las Cruces, NM* • Market Street Drainage Study, *Town of Silver City, NM* • Wastewater Collection System Improvements, Village of Loving, NM • Berino Pond Erosion Mitigation, *Flood Commission, Dona Ana County, NM* • Ruidoso Bridges Reconstruction, *Village of Ruidoso, NM* • Water Storage System Improvements, *City of Portales, NM* • Force Main and Rockwall, *Winterhaven MDWC and SWA, Dona Ana County, NM*

Evaluation Criteria No. 2 (Qualifications/Competence)

Team Member & % of Time Assigned	Areas of Competence	Description of Experience
 Sean Wolfe, PG Officer of the Firm Responsible for Administration of the Contract *PG #10333* **Time Assigned: 20%**	• 24 years of subsurface utility exploration and survey experience • 15 years of project management experience • 12 years of experience on projects located in Doña Ana County	**Strengths and Qualifications:** Mr. Wolfe has 24 years of experience in the subsurface utility exploration and surveying fields. As a Professional Geologist, he is uniquely suited and experienced with the geophysical equipment and techniques used in the subsurface utility exploration profession. He has completed projects for DOTs, universities, municipalities, counties, and private utilities. Mr. Wolfe has acted as Project Manager and Field Supervisor, actively participating and supervising multiple Level A and B field crews. His experience includes all levels of subsurface utility exploration activities. **Project Experience:** South Valley Drive, *City of Las Cruces, NM* • Talavera 8-inch High Pressure Gas Pipeline, *City of Las Cruces, NM* • Downtown Redevelopment Project, *City of Las Cruces, NM* • Roadrunner Parkway Extension, *City of Las Cruces, NM* • Picacho Avenue and 17th Street Intersection, *NMDOT, Las Cruces, NM* • New Mexico 188 and New Mexico 28 Corridor Study, *NMDOT, Las Cruces, NM* • New Mexico 273 McNutt Roadway Improvements, *Smith Engineering, Sunland Park, NM* • IH 25/Missouri Avenue Bridge Rehabilitation, Las Cruces • IH 25/University Avenue Phase I Services, *NMDOT, Las Cruces, NM*
 Freddie Jaramillo Subsurface Utility Exploration Lead **Time Assigned: 30%**	• 12 years of experience locating utilities using a VAC truck; has worked on projects using as-builts, utility records, and visible	**Strengths and Qualifications:** Mr. Jaramillo has 12 years of experience locating utilities using a VAC truck and radio equipment. He has worked on projects using as-builts, utility records, and visible features to designate utilities using various locate equipment such as an RD-8100, GPR, Metrotech 810, and a GEO mapper. His field experience includes creating field sketches with line types and features to hand off to Survey crews, working with pole cameras to video pipe conditions, and mapping communication manholes and sketched fiber runs for various Utility owners. Mr. Jaramillo has managed field crews to finish jobs before deadlines and under budget. **Project Experience:** Browns Farm, *City of Las Cruces, NM* • University Drive, *City of Las Cruces, NM* • Veterans Park, *City of Las Cruces, NM* • Cortez Drive, *City of Las Cruces, NM* • US 60 and 84 from 7th Street East Prince Street, *NMDOT, Clovis, NM* • On-Call Utility Locating, *University of New Mexico, Albuquerque, NM* • Re-Use Water Transmission Pipeline, *City of Rio Rancho, NM* • Boone Wastewater Interceptor Phase II, *EPWater, El Paso, TX* • US 285 Roadway Rehabilitation Phase I, *Eddy County, NM*
 Darren Leveille, PLS Surveying Lead *NM PLS #27277* **Time Assigned: 30%**	• 29 years of subsurface utility exploration and survey project management experience • Experience with high accuracy control networks, data management, data processing, boundary determination and control	**Strengths and Qualifications:** Mr. Leveille is a Senior Project Manager with 29 years of experience in working in all disciplines of the surveying and mapping industry. He has extensive experience in working with high accuracy control networks and technical aspects of data management, data processing, boundary determination, and boundary control. In his role as a Senior Project Manager, Mr. Leveille's function is to ensure that data being gathered by field staff is both accurate and within the specified project tolerances. This includes managing all field and CAD personnel associated with a project to maintain a high quality of deliverable and keeping projects within their specified budgets. **Project Experience:** 25th Street Investigation, *City of Aurora, CO* • Havana Street Improvements, *City of Aurora, CO* • Waterline Replacement, *City of Englewood, CO* • Hummingbird Circle and Ptarmigan Trail, *Tetra Tech, Town of Silverthorne, CO* • Straight Creek Drive, *Tetra Tech, Dillon Valley District, CO*

Evaluation Criteria No. 2 (Qualifications/Competence)

Team Member & % of Time Assigned	Areas of Competence	Description of Experience
 Bobby Ortiz, CST III Survey Field Coordinator *NM CST III #1100-1289* **Time Assigned: 25%**	• 32 years of survey project management experience • Successfully delivered projects for federal and state agencies and many municipalities throughout New Mexico	**Strengths and Qualifications:** Mr. Ortiz has spent 32 years in the surveying industry acting as a Project Manager on hundreds of survey projects. He has been responsible for supervising and scheduling survey field crews in the production of all types of surveys, including second and third order geodetic surveys, second and third order leveling surveys, and a variety of photogrammetric control surveys throughout New Mexico and the Southwest. He has served as a Crew Chief and Project Manager on many projects to perform control work, boundary verification, topographic surveys, property surveys, ROW surveys, and construction staking and leveling. **Project Experience:** Chula/Morgan: LPGL, *AECOM, City of Las Cruces, NM* • Technical Services, *AECOM, City of Las Cruces, NM* • Cortez Drive, *HDR, City of Las Cruces, NM* • Well 64, *DBS&A, City of Las Cruces, NM* • Dripping Springs Road Utility Mapping, *BHI, City of Las Cruces, NM* • Roadrunner Parkway Extension, *Smith Engineering, City of Las Cruces, NM* • Downtown Redevelopment Project, *Parkhill, City of Las Cruces, NM*
 Jesus Ramos, PE Construction Contract Administration Lead *NM PE #23052* **Time Assigned: 20%**	• 26 years of civil engineering experience including construction contract administration	**Strengths and Qualifications:** Mr. Ramos has 26 years of experience in civil engineering including construction contract administration. He has completed projects throughout the states of New Mexico and Texas, including projects for NMDOT, TxDOT, the City of Las Cruces, the City of El Paso, EPWater, and the Camino Real RMA. His construction experience includes complete bidding process, scheduling, field investigations, and utility management and verification. **Project Experience:** Florida Street Widening, *City of Deming, NM* • Racetrack Street and Drainage Improvements, *Luna County, NM* • Haciendas San Gabriel Unit One, *Sunland Park, NM* • Otis Water System Improvements, *Otis MDWC & SWA, Eddy County, NM* • Cody Road Pavement Rehabilitation, *City of Deming, NM* • Gold Street Pavement Rehabilitation, *City of Deming, NM*
 Tim Archibeque, PE Airport Facilities Design Lead *NM PE #23052* **Time Assigned: 40%**	• 30 years of experience in airport engineering design, preparation of construction PS&E, cost estimating, writing project design reports and final reports • Extensive grant administration experience preparing grant applications for CIPs and governmental agency coordination and requirements (FAA & NMDOT)	**Strengths and Qualifications:** Mr. Archibeque is a seasoned airport engineer that has designed, constructed, and provided QA/QC for over 200 airport CIPs. He utilizes his experience to supervise and guide his project team through each phase, ensuring compliance with all guidelines and agency requirements. As a New Mexico native with 30 years of engineering and design experience, Mr. Archibeque has an intimate understanding of the New Mexico aviation environment and has established a long-term working relationship with local, state, and federal regulatory personnel. **Project Experience:** Conceptual Development Plan, *Dona Ana County International Jetport, Santa Teresa, NM* • Las Cruces Army National Guard Readiness Center, Las Cruces International Airport, Las Cruces, NM • Taxiway A& J Construction, Airfield Pavement Maintenance, Runway Reconstruction, and Apron Rehabilitation, *Roswell Air Center, Roswell, NM* • Apron Rehabilitation, Airfield Pavement Maintenance and Pavement Preservation, Airport Parking Lot Repairs, *Deming Municipal Airport, Deming, NM*

Evaluation Criteria No. 2 (Qualifications/Competence)

B. NAME, ADDRESS, TELEPHONE NUMBER OF THE PRINCIPAL MEMBER/OFFICER OF THE FIRM RESPONSIBLE FOR ADMINISTRATION OF THE CONTRACT

Sean Wolfe, PG | Senior Vice President | Mountain Region Manager

Address:
3820 Academy Parkway North NE
Albuquerque, New Mexico 87109

Phone: 505.508.0786
Fax: 505.508.0837
Email: swolfe@cobbfendley.com

SUBCONSULTANT ADDRESS, QUALIFICATIONS, AND AREAS OF RESPONSIBILITY

Armstrong

Responsible Address:
2201 Buena Vista Drive SE, Suite 204
Albuquerque, NM 87106

Phone: 505.508.2192
Fax: 303.496.1616
Email: tarchibeque@hwlochner.com

Firm Qualifications: Armstrong recently expanded their capabilities by joining the Lochner family of companies. This transformative partnership marks a pivotal moment in the firm's history and paves the way for a promising future. Armstrong has proudly served the aviation industry for over five decades, working with more than 150 airport clients and successfully completing over 3,000 CIP. Armstrong has served New Mexico's aviation community for 30 years and currently works with 20 airports in the state.

Lochner, founded in 1944, boasts a legacy of providing comprehensive planning, environmental, design, construction engineering and inspection, and ROW services. With a network of 50 offices throughout the United States, Lochner has delivered excellence in surface transportation, rail, transit, and aviation projects. Together, Lochner and Armstrong have formed a powerful National Aviation Practice that offers the City access to a broader spectrum of aviation professionals, services, and cutting-edge technology. This union allows the firm to provide an even more comprehensive suite of services, ensuring that the City's aviation projects are executed with precision and innovation.

Areas of Responsibility: Airport Engineering Facilities Design Services

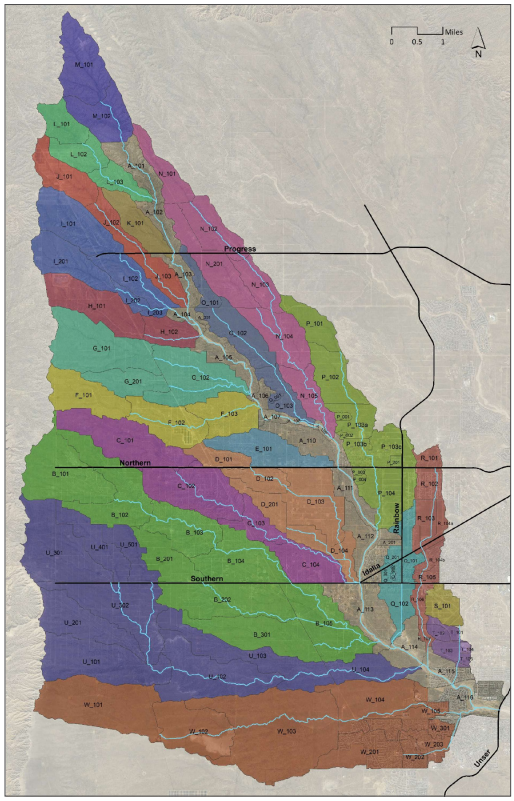
Evaluation Criteria No. 3 (Performance of the firm)

CALABACILLAS ARROYO HEC-HMS

SOUTHERN SANDOVAL COUNTY ARROYO FLOOD CONTROL AUTHORITY (SSCAFCA) | RIO RANCHO, NEW MEXICO



Project Description: CobbFendley performed hydrologic model review and verification on behalf of the SSCAFCA through its on-call engineering services contract. The Calabacillas Arroyo encompasses approximately 80 square miles of high desert landscape and developed portions of the City of Rio Rancho.

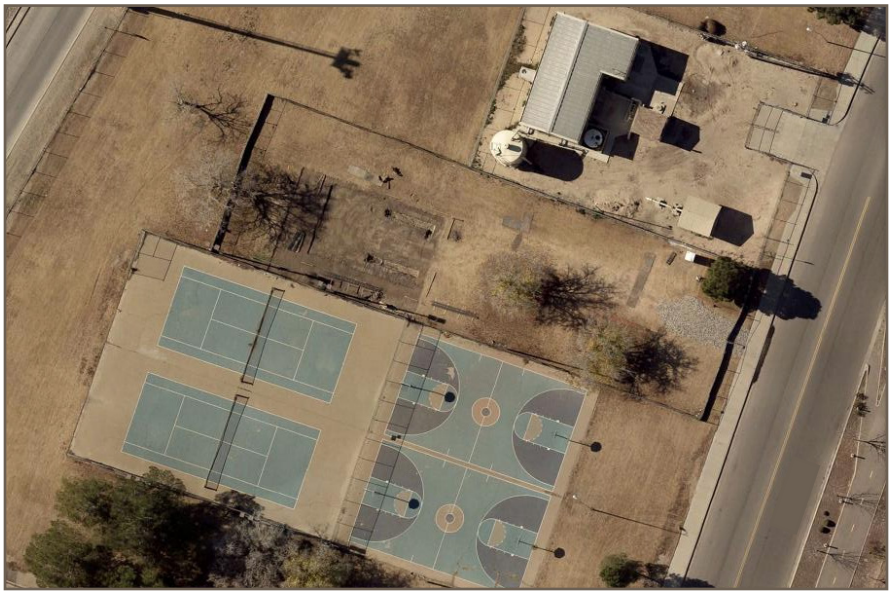
REFERENCE

SSCAFCA
Mr. Gerhard Schoener, Ph.D. | Watershed Scientist
1041 Commercial Drive SE
Rio Rancho, NM 87124
505.892.7246
gschoener@sscafca.com

A thorough review of SSCAFCA's HEC-HMS (US Army Corps of Engineers Hydrologic Engineering Center – Hydrologic Modeling System) model was performed to verify all elements of this 100-year storm analysis. CobbFendley utilized ESRI ArcGIS to verify topographic surfaces, flow paths and other watershed physical characteristics for HEC-HMS model inputs. Evaluation of existing hydraulic structures including detention ponds, dams, storm drains, and open channel systems were included. A summary report compared and contrasted the SSCAFCA version with the parallel model created by CobbFendley as part of the verification process.

JP SHAWVER PARK HANDBALL COURT

CITY OF EL PASO | EL PASO, TEXAS



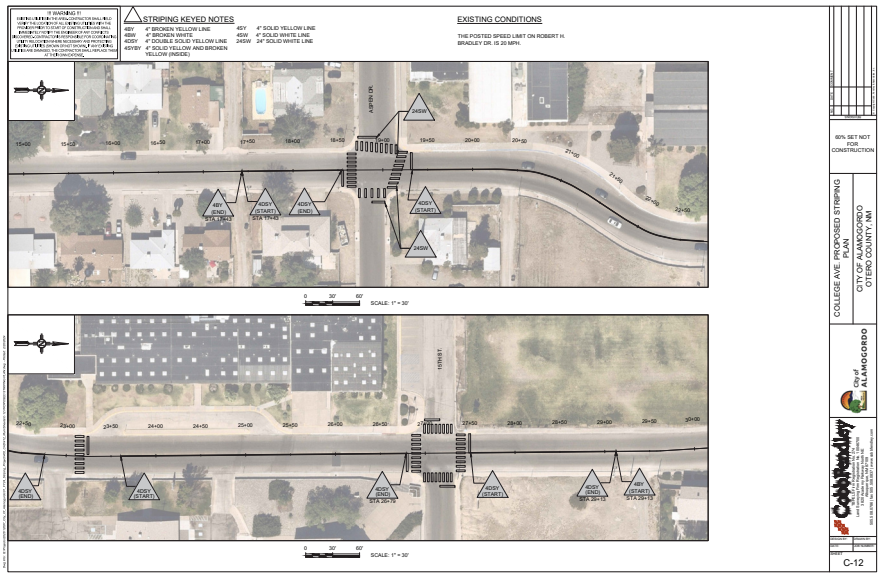
REFERENCE

CITY OF EL PASO CAPITAL IMPROVEMENT DEPARTMENT
Mr. Jesus Palma, Engineer Associate
218 N. Campbell Street, 2nd Floor
El Paso, Texas 79901
915.212.1835
palmaj@elpasotexas.gov

Project Description: CobbFendley was tasked by the City of El Paso to perform professional engineering services for the improvements of JP Shawver Handball Court Park. Key items as identified in the city description of work included a three-wall handball court system to include clearing, grubbing, grading, slab with footings, and vertical walls with footing. The design also included new ADA compliant concrete sidewalk, irrigation modifications, two new solar lights for the handball court, and soils investigation. Design analysis was performed during the design period. A topographic and improvements survey, environmental study, and SWPPP were also performed under the task. Technical specifications and an Opinion of Probable Construction Cost were performed before construction.

Evaluation Criteria No. 3 (Performance of the firm)

ALAMOGORDO STRIPING PROJECT
CITY OF ALAMOGORDO | ALAMOGORDO, NEW MEXICO



REFERENCE

CITY OF ALAMOGORDO
David Nunnelley | Utilities Director
42 Valley View Drive
La Luz, New Mexico 88337
575.489.2274
dnunnelley@ci.alamogordo.nm.us

Project Description: CobbFendley, as an On-Call service provider to the City, performed professional surveying and engineering services to restripe 9.2-miles of various street segments within the City of Alamogordo. Engineering services included preparing 90% and final design construction plans, construction cost estimate, and bid tabulation to restripe each street segment based on existing striping layout and verifying and documenting existing conditions and proposed design features. Surveying services for this project included validating existing City of Alamogordo geodetic control, setting two to three survey control points per roadway corridor, and developing a certified control map depicting control points along with horizontal and vertical values.

CobbFendley is proud of our **COMMITMENT TO QUALITY** *and customer satisfaction. Our business is built on repeat business, so we work to make every reasonable effort to provide services of the highest quality. From design through construction, we provide quality professionals who have a sense of ownership in the projects that we undertake and the abilities to back it up.*

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Frank X. Spencer & Associates, Inc., of 1130 Montana Ave., El Paso, TX, 79902, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Frank X. Spencer & Associates, Inc. 1130 Montana Ave. El Paso, TX 79902 ATTENTION: Frank X. Spencer

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

Includes labor and equipment for records research, CADD, and mapping.	LF	$ 0.72
SUE Quality Level B - Utility Designation		
Includes labor and equipment for records research, designating, engineering, surveying, CADD mapping and limited traffic control.	LF	$ 1.66
SUE Quality Level A - Utility Locate, Test Holes		
Includes labor and equipment for vacuum excavation, engineering, surveying, CADD, and limited traffic control. These prices reflect that a Quality Level B service has been provided.		
Level A: 0 to 5 ft.	each	$ 1,220.00
Level A: > 5 to 8 ft.	each	$ 1,500.00
Level A: > 8 to 13 ft.	each	$ 1,820.00
Level A: > 13 to 20 ft.	each	$ 2,325.00
Level A: > 20 ft.	VF	$ 205.00
SUE Mobilization/Demobilization		
These costs are intended to be a one-time expense compensation for mobilizing/demobilizing personnel and equipment portal to portal. Vacuum excavation truck (non-local)	Mile	$ 4.85

Las Cruces, NM 88001

Re: City of Las Cruces Civil Engineering Services, RFP 23-24-050

To Whom It May Concern,

This letter is to express Frank X. Spencer and Associates, Inc.'s (FXSA) strong interest in providing professional civil engineering services on an on-call basis to the City of Las Cruces. FXSA has the capabilities being sought to address all forthcoming projects under this contract. Mr. Javier Acosta, PE, Vice President, will be the point of contact for FXSA. He is located at our El Paso office at 1130 Montana Ave., El Paso, TX 79902 and can be reached at 915-533-4600.

Our full-service firm has extensive experience working closely with Cities, Counties, State Agencies, Federal Government and private entities since our inception in 1979. We provide professional civil engineering, surveying & mapping, subsurface utilities engineering (SUE), geographic information systems (GIS), laser scanning/3D modeling, UAVs/Drones services with FAA certified pilots, and construction management services. FXSA is a civil engineering firm with experience working throughout New Mexico, Texas, Oklahoma, Arkansas, and several other states. Our firm is a Small Business, Minority-Owned, Woman-Owned Small Business, HUBZone, HUB, and DBE certified.

The FXSA Team has a comprehensive understanding of the area conditions as our headquarters office is located within short distance away from Las Cruces. We have performed numerous projects in the region. Moreover, FXSA upholds a foundation of integrity by delivering the highest standards of professional services to its clients. **We are committed to providing on-time, accurate, and quality solutions to enhance the development of the community.**

Please do not hesitate to call us at (915) 533-4600, should you require additional information. We also acknowledge receipt of Addendum One and Two.

Most Sincerely,

Frank X. Spencer, PE, RPLS
Senior Vice President

CITY OF LAS CRUCES

RFP COMPLIANCE DECLARATION

RFP TITLE: **Civil Engineering Services**

RFP NO.: **23-24-050**

DUE DATE/TIME: **February 27, 2024 / 4:00 p.m.**

In compliance with the requirements of this RFP, I, the undersigned, offer and agree to furnish any or all materials and/or services to the City of Las Cruces within the time agreed.

I further certify that this company has not been debarred, suspended, or otherwise made ineligible for participation in Federal Assistance programs under Executive Order 12549 Debarment and Suspension as described in the Federal Rules and Regulations.

Receipt of Addenda Nos.: 1 and 2 is hereby acknowledged (where none received, place a zero in this space)

Company Name and Address:

FAILURE TO INCLUDE WILL SUBJECT RESPONSE TO REJECTION

A. Technical Proposal

EVALUATION CRITERIA 1. TECHNICAL APPROACH

a. Proposed technical approach of all professional, technical, and customary services

Understanding of Scope of Work

The FXSA Team fully understands the requirements and objectives of this contract. Our team has performed on-call contracts for numerous federal agencies, state agencies, counties and cities throughout our 44 year history. Our expertise in different design, rehabilitation, and improvement projects includes study & report, land surveying, subsurface utility engineering (SUE), geographic information systems (GIS), geospatial services, final design, bidding & negotiations, and construction management. FXSA services will be performed under the supervision of our ***Project Manager, Javier Acosta, PE, CFM, PTOE.***

Approach to Services

The engineering services under this contract will be provided on an on-call basis for public infrastructure improvements in the City of Las Cruces.

Each project is faced with its own set of challenges and opportunities. At FXSA, we are pragmatic and work at resolving any obstacles in the best practical way for our clients. We are mindful that both budget and timelines are met. When and if something arises that threatens to derail either of those, you can rest assured that we are working hard to present the best possible resolution, having little to no impact on deadlines or budgets.

Getting projects completed from start to finish within schedule and under budget is the goal while keeping the public's safety and best interest always in mind. An aesthetic component must be considered in keeping with the City of Las Cruces Vision. A complete and thorough understanding of the standards and procedures will help reduce time during design and reviews.

FXSA's key personnel has more than 150 years of combined experience providing these services. Our team will be in constant communication with the City Staff throughout the projects.

FXSA has addressed infrastructure needs for: aging and new water supply distribution systems, wastewater collection systems, stormwater management systems, wastewater treatment plants, sewer infrastructure improvements, drainage improvements, FEMA flood studies, street and highway improvements, subdivision planning & review, parking lots, sports facilities, solid waste landfills, and site design projects for new facilities or renovation, roofing improvements, and master planning projects, to name a few.

With our team's knowledge of civil engineering practices, the industry's underlying principles and guidelines, and our performance history in projects of identical or similar scope, FXSA will offer superior and efficient results to the City of Las Cruces.

Value Engineering

Identifying issues in the planning & design phase will increase the opportunity to reduce costs during construction. Some key ways to achieve this include:

- **Keeping an open mind and thinking outside the box from traditional construction methods**
- **Researching alternate materials/methods with lead times in mind to help keep projects on schedule and under budget**
- **Identify opportunities to recycle materials and investigate materials that have been used on previous or existing projects**
- **Coordination with vendors to help identify lead times and alternative materials**

Critical components for the successful execution of a project are; team ***communication***, thorough ***understanding*** of scope of work, ***experience*** with the type of assignments, overcoming challenges with ***management skills*** and ability to ***innovate*** formulating solutions and ***cost-effective measures***. The City of Las Cruces can be assured that all 6 components are implemented diligently by the FXSA Team. We have specialized experience, professional qualifications, knowledge of the geographic area, and exceptional past performance to meet and exceed the City's expectations.

To achieve the final product and provide the services requested, ***FXSA will focus on the following items:***

- **Coordination and planning**
- **Proactive approach**
- **Keeping the public's safety and their best interest in mind**
- **Thorough quality checks and assurances**
- **Thinking outside the box to find innovative and cost-effective alternatives**

Lead times and construction costs have been in a state of flux due to demand and supply issues caused by several factors. This can be mitigated by having a proper understanding of the final deliverables and the steps to reach the final product. The early planning stages will be critical. Meetings with stakeholders, engineers, subconsultants, and construction management personnel will be key.

Coordination, planning, and quality assurance checks during the design and planning phases will help reduce or eliminate the need for costly change orders. ***Taking proactive approaches in the planning and design phases such as:***

- **Identification of stakeholders**
- **Meetings with all involved stakeholders to identify potential problems**
- **Easement and right of way acquisition**
- **Organizing subsurface utility inspections**
- **Identifying alternative means, methods, and materials for construction**
- **Keeping all party's properly informed with the latest information and schedules**

FXSA Project Approach

1. **Identify Alternatives:** We identify all feasible technologies and strategies that can be used to accomplish the task. Our list, including the advantages and disadvantages for each alternative, is reviewed with the City of Las Cruces.

2. **Select an Alternative:** We are always ready to recommend a solution, but nobody knows the City's infrastructure and resources like the City of Las Cruces staff. We will work with you to make an excellent choice.

3. **Design:** Perhaps the most critical part of a project is defining the parameters by which the engineering will be performed. We will coordinate with the City of Las Cruces for the selection of specifications and standards to be used.

4. **Assist with Bidding:** With the costs of products and services constantly changing, FXSA uses the latest bid results and deductive alternates to make sure we can tailor a project, even after bidding, to fit your budget.

5. **Assist with Construction:** FXSA's highly experienced staff check adherences to plans and specifications to ensure the product is accurately constructed.

6. **Project Closeout:** In the long-term, record drawings are indispensable. We can produce record drawings (as-built) information on a variety of formats including hard, soft and geographic databases.

"Thank you. It was a pleasure working with you and your team...the deliverables provided are clearly defined and identifiable."

-David Meza, Project Manager, El Paso Electric

b. Major tasks to be accomplished

Engineering Designs. The initial engineering design phase will consist of the following components: attend preliminary conference with the City of Las Cruces and other interested parties to determine the specific needs and requirements of the proposed projects. Provide all project information necessary to ensure timely execution of the environmental review. Provide preliminary engineering / surveying, soil and/or groundwater investigations, special testing, and drawings which, in the opinion of the Engineer, may be required for the proper execution of the preliminary phase. In the preliminary phase, any anticipated obstacles, limitations, and potential project impacts will be detailed clearly and alternate solutions presented to City of Las Cruces for project implementation (i.e. pipelines, easements, permitting, environmental, etc.), prior to moving forward. These will be detailed clearly, with alternate solutions to be presented to the City of Las Cruces. The civil engineer recommendation will be set forth clearly on preliminary project layouts, sketches, maps, accurate project descriptions, cost estimates, and project justification. A preliminary engineer's report will be prepared. The final engineering design phase will consist of the following components: prepare plans and profiles, including necessary design information for the selected alternative sufficient to achieve all detailed design milestones.

FXSA has experience in designing street, stormwater, and drainage capital improvement projects. ***Most recently, our firm performed a sewer modeling project of the entire Lower Valley Water District's sewer modeling system in Clint, TX.*** Sewer modeling can answer questions regarding capacity expansion and new design; identify problematic areas, improvements to correct connectivity; and analyze current & future conditions, new designs or upgrades, and master planning elements. Moreover, FXSA's experience with drainage hydrology & hydraulics enables the opportunity to create designs that withstand not only growing economic and population demands but also recurring storm events. Additionally, our Team can provide an in-depth analysis of the existing drainage infrastructure to asses its current adequate condition, and can provide options for any necessary drainage improvements. We have experience designing natural channels with large watershed storage volumes, quantified by using HEC-GeoRAS and performing FEMA flood studies and elevations.

Moreover, FXSA has performed zoning analysis and land use evaluation, to determine the size, type, and other development characteristics. FXSA is committed to protecting the public health, safety, and general welfare of the residents Las Cruces. Our firm recognizes the specific procedures, technical criterion, and legal standards that must be followed to satisfy statutory requirements. FXSA has staff available with in-depth knowledge of design standards and that has helped develop standards for various municipalities.

Engineering Drawings, Plans, & Specifications. Data search & record drawings (as-built) are a critical part of the foundation of the project. FXSA will prepare specifications and drawings, as required by the City of Las Cruces. The designs will, in all respects, combine the application of sound engineering principles. This includes but is not limited to: cross sections / elevations; project layout / stagings areas; design details; specifications; utility relocation designs; construction limits (including environmentally sensitive areas); required permits; quantities; estimate of construction costs; schedules for design, permitting, acquisition and construction. FXSA will provide hard copy or electronic copy, as required by the City, of plan drawings and bid documents, upon completion and during design.

Utility, Geotechnical and Environmental Investigations. Our Team will perform SUE Quality Levels D-A as required by each project. We are equipped with the necessary equipment and technology to perform non-destructive investigations. Our subconsultant, LOI Engineering (LOI), will deploy services for all soils investigations and environmental issues. Geotechnical and soil investigations performed will be performed to obtain information on the physical properties of the soil earthworks and foundations for proposed structures. The FXSA Team will ensure federal laws like NEPA are followed. LOI will bring environmental considerations to the project by providing site assessments, investigations/remediation, planning (natural and cultural), regulatory compliance amongst other services.

Permitting. The FXSA Team has outstanding relationships with State & Federal regulatory agencies and a thorough understanding of codes, and regulations, regulatory requirements, to position our clients for a simple project approval process. We will coordinate with the different agencies involved and as required.

Communication is key. At FXSA, we understand the value of good and effective communication skills. We strive to perfect this skill not only internally, but also with our subconsultants and our clients. The FXSA Team will conduct an internal kick-off meeting in which we will review every detail of the scope or work and consider and discuss the project from all angles - from scope details and best qualified personnel, to the need of involvement of our subconsultants. Our Team produces meeting minutes for all in-person, virtual, or phone meetings and distributes them to all participants. In addition, our proposals (fee and scope of work) are always reviewed by senior managers before submittal to clients. ***One of the perks of being a small firm is to have all of our personnel and resources in one office, giving us the ability to create better relationships and expedite communication between our team and with the City staff.***

We know that recovering from schedule delays can be an obstacle for our clients. In order to avoid delays and the inherent burdens they inflict upon the project, we conduct weekly project meetings internally to review and assess all elements of the project. If we see that something is amiss in the project we will immediately work on the best viable and innovative solutions for our client and present to them in a timely manner to avoid and/or minimize any delays or financial impacts to the project. ***Many contracts and projects undertaken by FXSA have been completed ahead of schedule.***

Our proactive approach and communication skills are an excellent tool to control costs during the design process and construction. The delivery of proper documentation, from correct proposals to a good set of complete construction documents will support our clients in their decision-making with all the necessary tools to move the project forward on time, within budget and in safe manner.

The FXSA Team is ready to start upon Notice to Proceed. With our in-house capabilities, we have wide control over projects, accurate work performance, and ensure timely project completion.

Javier Acosta, PE, PTOE, CFM, our Project Manager, will be responsible for reporting the progress of each project. Furthermore, we will assign the necessary staff and technological resources to comply with the needs of the City of Las Cruces.

One indicator of the FXSA Team's past performance is our repeated selection by the same clients under qualifications-based criteria. All contracts are being completed on-time, within budget, and without lost time or accidents.

Our Project Manager will be the communications liaison between the City of las Cruces and FXSA Team. ***It will be the responsibility of the Project Manager to facilitate effective communication with all project stakeholders, create a communication plan, set clear action items, identify risk management, and analyze the project's critical path, as for set realistic expectations to avoid project delays.***

Quality Control. Our clients' most valued aspect in the performance of a project lies in the quality of the deliverables. The success of our Team over the last 44 years has been based in great part on how we continuously improve the quality of the work we perform. ***All FXSA Team members will be ensuring excellent quality work.***

The FXSA Team will implement QA/QC measures necessary to ensure that work deliverables achieve the goals of the City of Las Cruces. Quality assurance comprises planned and systematic actions formulated to verify that project components are properly designed and detailed in accordance with FXSA standards and in conformance with all City standards to produce planning documents that are clear, concise, and include a cost-effective component.

FXSA has instituted a comprehensive and effective Quality Management Program (QMP). All personnel participate and have responsibilities with regard to the program. Standard operating procedures and work instructions are disseminated throughout the organization keeping all staff members abreast of procedure revisions. Our QMP includes confidence checks and statistical analysis of data throughout the project, controlled procedures for data handling, analysis of system performance, and a defined set of backup procedures to ensure zero data loss and adherence to the SOW requirements. Our QC process implements preventive measures to eliminate down-time and enables early detection of hardware, software, and procedural issues to maximize efficiency & high-quality data collection.

Quality Program Objectives:

- Achieve 100% client satisfaction
- Timely identification and effective correction of deficiencies to provide first-time-right deliverables
- Maintain an environment of continuous improvement, lessons-learned

Ability to Meet Schedules. FXSA conducts weekly scheduling meetings for all surveying and engineering tasks. ***Javier Acosta, PE Project Manager*** will be responsible for reporting the progress of each project and presenting scheduling for the following three months. This practice will allow us to plan to comply with the City of Las Cruces' needs. Furthermore, we will assign the necessary human and technological resources to comply with the delivery needs of the City. Our team has all the technological resources for project design and project scheduling to ensure that all phases of the project are completed on time. FXSA has a well-established cost control plan to ensure that the project is contained within budget. We will incorporate standard construction practices as part of our design, practical construction methods, cost-effective material components, and innovative land use designs.

FXSA QA/QC Methodology

1. Coordinate with the City of Las Cruces for a thorough scope of work understanding
2. Evaluate the project location and impact to the community and driving public
3. Identify project requirements and applicable City Codes, State, and Federal Regulations
4. Identify applicable guidelines and procedures set forth by the City of Las Cruces
5. Establish and comply with project scheduling and critical path
6. Strategize field operations and implementation of practical design
7. Constructability reviews and alternate cost-effective methods of construction based on availability, proven performance, and knowledge of products
8. Peer review among team members prior to design/ during design
9. Implement 95% Deliverables Review Checklist to evaluate completeness of the project according to requirements

WE ARE COMMITTED TO METICULOUS MANAGEMENT AND CONTINUOUS IMPROVEMENT

c. Detailed statement of services to be provided under each task

FXSA brings a qualified team of professionals for each of the disciplines required under this contract. Having most of the disciplines in-house, will allow us to perform and coordinate all tasks successfully for each project.

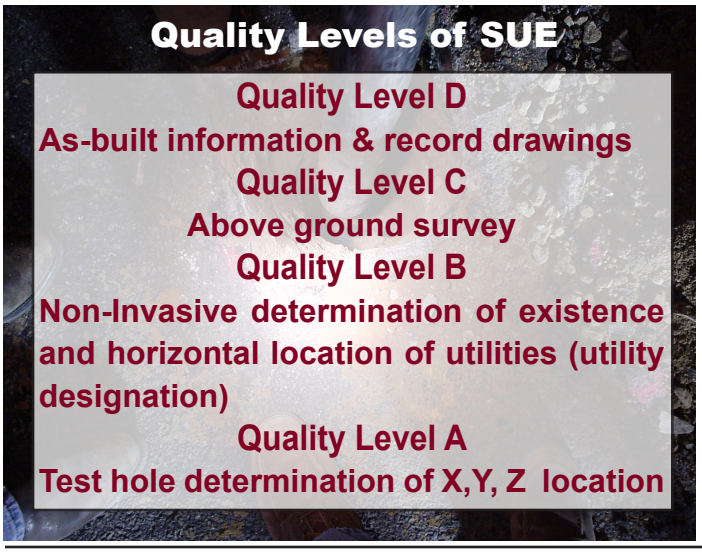
Civil Engineering. FXSA's work performance in engineering covers all services including: initial planning, preliminary design studies, development of plans & specifications, subsurface utilities engineering, assisting in bidding/negotiation, construction meetings, site visits to ensure plans are properly followed, reviewing contractor submittals for compliance with contract plans & specifications, applicable regulations, construction management, and project management. We have performed projects for ***master planning, feasibility studies, condition assessments, multi-modal transportation, water and wastewater resources, FEMA flood studies, site/land development, public works, parking lots design, roofing improvements, and sports complex improvements.*** Our firm works closely with the Federal Government, State Agencies, Counties, Cities, Oil & Gas companies, School Districts, and private entities. FXSA's experience throughout 44 years includes delivering project management and acting as the Town/City/County Engineer for several municipalities.

Construction Management. Our firm has ample experience negotiating with contractors and clients to reduce or eliminate change orders. Our Construction Management Team is involved from design phase, through project buy out to stay ahead of constructability issues and or materials delays. By maintaining an open line of communication with our clients and contractors we can mitigate critical issues and propose alternatives as needed. During the construction phase, FXSA has FAA Certified UAV Pilots with the ability to deploy drones to manage construction assets and monitor site progress. We have an aggressive and proactive team of engineers that will ensure the contractor completes the project as designed and as intended. We will keep the City's staff informed of all activities. ***FXSA uses ProCore software and has the ability to produce documents in alternate formats.***

Land Surveying & Mapping. FXSA provides a broad list of surveying services as required by each project. Our Team will visit the "as is" site conditions to understand the scope of work and how each design will be addressed, always keeping the City of Las Cruces best interest in mind. Our land surveyors work closely and seamlessly with engineers and other supporting professionals to perform surveys. Our FXSA Team includes ***Professional Surveyors*** with more than 100 years of combined experience and our Survey Crew Chiefs posses over 60 years of combined experience in the surveying field. We can dispatch survey crews within 24-hour notice to any project during the design and construction phases. FXSA will recommend the proper equipment and approach to expedite the project and help minimize costs. Our VRS network allows us to turn five (5) two-man field crews into ten (10) GPS rover field crews. ***Our firm prides itself in owning the latest equipment and technology such as:*** Basic and Customizable GIS solutions & applications, GPS, 3D Laser Scanning, AutoCAD Civil 3D, and Drone/UAV's Flight and Data Processing with FAA Certified Pilots as part of our team.

GIS. The best method to asses those emerging infrastructural problems is not through a response-to-emergency basis, but rather through an informed management approach. The FXSA Team can create a GIS database and map; with input from public and stakeholders to identify any factors influencing the planning phase. The GIS database can prioritize and color-code areas with the greatest need. Also, it can develop guidelines and serve to enforce ADA standards to apply a consistent approach. The guidelines can provide references to key ADA standards and outline field surveying techniques for evaluating different types of pedestrian facilities. Moreover, data becomes accumulated and turns into an online mapping tool that can provide geospatial information, accessibility attributes, and prioritization. In addition, FXSA can create GIS maps for traffic modeling by performing a network analysis of using historical and live traffic data.

Subsurface Utility Engineering (SUE). SUE is a process that involves managing risks associated with: utility mapping at appropriate quality levels; relocation; coordination; relocation design & coordination; condition assessment; communication of data to concerned parties to prevent conflict; cost estimates; and, implementation of accommodations policies & design. Collection of critical existing utility data is vital for the effective planning, design and construction for these projects. Combined with records research, site surveys, and using new technologies and methods, we provide "quality levels" of information. If conflicts are identified up front the appropriate mitigation and relocation measures can be instituted well before the construction phase resulting in condensed schedules and reduced costs. Many factors should be considered when approaching these projects such as the magnitude of existing utilities, availability of reliable record utility information, type and size of utilities, depth relative to proposed improvements, level of congestion and appropriate implementation of traffic control measures, restoration of vacuum excavation, surface restoration to maintain the desired level of transportation surface and application of routine safety measures to protect our crews and the public. By performing the SUE process, FXSA helps clients reduce multiple of unforeseeable utility conflicts/relocations, project design delays, construction delays, contractor claims and change orders, and design and construction costs. Our firm performs SUE following the ASCE Standard C-I 38-02 for this discipline.



Geotechnical Services. LOI Engineers deliver geotechnical engineering, environmental sciences, geosciences, and construction materials testing services. Our engineers have extensive experience developing recommendations for water and sewer lines, lift, pump and booster stations, stormwater retention/detention structures, dewatering studies, slope stability analysis, and design of both flexible and rigid pavement structures. Construction materials testing services, including: Soil testing (Atterberg limits, sieve analysis, proctor, CBR, etc.); Concrete testing (flexural and compressive strength, slump, air content, etc.); and Hot-mix asphaltic concrete (Marshall, flow, stability, etc.). LOI is validated by the USACE and are accredited by AASHTO.

Expert witness in a judicial and/or quasi-judicial setting. FXSA will review all claims made by a plaintiff against the City. FXSA will review all regulations and requirements that may be pertinent to the claims. Our team will then provide the City an opinion on whether the claims are valid. Our team will assist the City in responding to all interrogatories and requests for production submitted by the plaintiff. FXSA will perform the needed research to obtain copies of any deeds, descriptions, maps, plats of survey and construction plans that may be needed to address the claims. If the claims require a land survey, our survey crew will go to the particular site and collect any needed field data. We will then prepare any needed exhibits or reports using the collected field data. The exhibits and reports will be submitted to the City for their use in the judicial or quasi-judicial setting. We will provide a professional land surveyor to assist the City during the judicial or quasi-judicial setting. If needed, the professional land surveyor will provide expert witness testimony at the judicial or quasi-judicial setting.

Project Management. Communication between team members and deliverables management are best practices in the coordination and successful delivery of a project. FXSA will facilitate coordination between FXSA and the City of Las Cruces and between FXSA and subconsultants. This coordination will ensure deliverables are provided on time.

Unmanned Aerial Vehicle (UAV). FXSA offers professional drone solutions. Our Team has 2 FAA Certified Pilots in command. We stand to deliver reliable data while saving your organization time and money. Our UAV Drone solutions are applicable for a variety of industries to include the following areas: Perform aerial inspections of infrastructure; Access power lines or structures and transmit imagery providing efficient emergency solutions; Manage construction assets and process.

3D Laser Scanning. Our commitment to excellence, precision and innovation allows us to assess risks and hazards, minimizing cost and security issues. FXSA is subscribed to ISNetworld - maintaining safety, insurance, quality and regulatory information up to date. FXSA's 3D laser scanning services include: Accurate Non-Contract Measurements; Accurate As-Built for Civil and Petrochemical Industries; Scanning for BIM; Clash Detection and Avoidance for Constructability Reviews; Scanning for Volume Calculations; Deformation Analysis; Accident Reconstruction; Pipe Routing and Spool; Industrial Surveys; Construction Verification Surveys; and Virtual 3D Walk-Through for Project Management.

SPiDER Manhole Scanner. Sanitary Sewer Assessment and Certification Program - FXSA offers condition assessment in accordance with the National Association of Sewer Service Companies, NASSCO for pipeline and manhole assessments. This includes identification and assessment providing a worldwide standardized consistency to the methods in which conditions are identified, evaluated, and managed. FXSA's goal is to provide utility owners a comprehensive database to properly identify, prioritize, and manage their assets based on condition evaluation. FXSA field crews specialize in the use of CUES portable 3D SPiDER scanner that captures live video and 3D imagery.

d. Typical project schedule/timeline

The FXSA Team will prepare a project schedule for each task order. The schedule will clearly detail specific tasks to be performed and the assigned timeframe. The schedule will be discussed with the City of Las Cruces Project Manager.

- Project schedule will be prepared in Microsoft Project/Monday.com
- The schedule will be distributed among all project members
- Weekly internal coordination meetings will be held to keep track of progress of all project activities and take appropriate corrective action if tasks are falling behind schedule
- Clarify any project concerns by issuing necessary follow-up communications and coordination
- Our Survey Crew Chiefs will prepare an electronic daily report providing a summary of work completed, instructions received, issues encountered, potential issues anticipated, equipment and vehicle issues that could result in potential time delays on the project or potentially affect the quality of the work.
- Our Technicians will clarify any questions/concerns with the field personnel regarding the data received
- Our Project Manager will oversee all work being performed during the design of the project and maintain communication with the City Staff.

"Thankfully, with the help of FXSA, we have been able to now locate the problematic areas of the system and implement projects vital to the community. The coordination and execution done by FXSA has made them a trusted advisor for us as we continue with projects to help the community."
Ed Long, PE, LVWD Chief Operations and Technical Officer

EVALUATION CRITERIA 2. QUALIFICATIONS/COMPETENCE

a. Key personnel who will be assigned to provide the services. Description of experience, areas of competence and percent of time assigned to the project.

Javier Acosta, PE, CFM, PTOE, is our Project Manager for this contract. Javier's diverse leadership history is an essential asset for project success, as dynamic problems require an interdisciplinary approach. Javier will be the communication liaison between the City of Las Cruces and our team.

Principal in Charge | QA/QC

Frank X. Spencer, PE, RPLS - B.S. Civil Engineering

PE: TX 41152
RPLS: TX 2198

Frank has over 52 years experience in civil engineering, surveying, and construction. Project duties have included project management, developing design standards, directing project team work, and quality control of completed work. His areas of expertise include design and construction of several water supply and distribution design, street & highway design, drainage design, site design, wastewater treatment facilities design, sanitary sewer gathering systems, solid waste facilities, and numerous amounts of route, boundary, and topographic surveys. Frank has successfully completed numerous projects involving these services for clients such as Town of Pecos City, City of Valentine, City of Presidio, Horizon City, Town of Anthony, Fort Davis, Reeves County, Loving County, Jeff Davis County, El Paso Water, City of El Paso, County of El Paso, USACE, BLM, U.S. Census Bureau, U.S. Department of Veterans Affairs, Marathon Refining, Oil & Gas companies, private entities, among many others. Frank served as County Surveyor for Reeves County, TX from 1978-2002.

Project Manager

Javier Acosta, PE, PTOE, CFM - BS Civil Engineering, BS Surveying Engineering

PE: NM 19976
PE: TX 109225
PTOE: 4201
CFM: 4055-21N

Javier has 22 years of experience in civil engineering, project/contract management, and construction for municipalities & private sector. Expertise includes: master planning, site design, sewer & water design, drainage, hydrology (HEC-HMS) & hydraulics (HEC-RAS), channel evaluation & stability, floodplain analysis, storm water conveyance systems, SW3P, land development, wetlands delineation reports & water resources planning, traffic operations engineering, roadway/street design and rehabilitation, amongst others. Has designed storm water systems including 100-yrs hydraulic grade line for pipe diameters up to 54 inches and designed ponds for 100-yr storm events. Experienced coordinating with regulatory & permitting agencies and inspection to ensure compliance with City and State Standards, including driveways, ADA accessible paths, walls, streets, drainage, water/wastewater within ROW. Prior experience reviewing all new subdivisions within the City of El Paso and Extra Territorial Jurisdiction from 2017-2021, an average of 35 subdivisions per year. Voting member/secretary of the Texas Water Development Board Regional Flood Planning Region 14.

Survey Project Manager

Isaac Camacho, RPLS, PE, PS - B.S. Civil Engineering

PS: NM 9254
RPLS: TX 5337

Isaac has over 49 years of experience in surveying and civil engineering. His experience in surveying & mapping includes topographic surveys, right-of-way maps, survey for design, construction staking, boundary surveys, pipeline & well location surveys, and hydrographic surveys. Moreover, Isaac has performed deed research, checked survey plats and prepared metes and bounds descriptions for numerous projects. As a civil engineer, Isaac has extensive experience in the design of water lines, stormwater, sewer lines, drainage, roadways, traffic impact analyses, traffic control plans, and warrant studies for traffic control devices projects. He was the District Traffic Engineer for the New Mexico State Highway and Transportation Department from 1988 to 1996 where he reviewed, inspected, and approved access and utility permits; designed, reviewed, and inspected traffic control plans for construction and maintenance projects; and performed traffic studies for traffic control device installation.

Project Engineer

Adrian Briones, PE - B.S. Civil Engineering

PE: TX 138501

Adrian has over 9 years of experience in civil engineering, project planning, and design management for a diverse range of water-related projects. Extensive expertise in infrastructure supervision for the quality and integrity of water distribution and collection systems. He has been responsible for multiple projects, from wastewater treatment plant expansion, collection systems, design of new water & sewer lines, the creation of new service connections, pump & lift stations, to stormwater remediation projects. Abundant expertise in liaising projects with stakeholders, including government entities, contractors, funding agencies, developers, and the general public. He has led design teams for both residential and commercial land development projects, involving the design of streets, grading, retention ponds, drainage structures, and water & wastewater utilities. Experience performing feasibility and due diligence studies for municipal, state, and federal infrastructure improvements, mitigation, and design solutions. Former engineer for Lower Valley Water District.

Project Engineer

Gabriel Reveles - BS Civil Engineering

Gabriel has over 23 years of experience in the engineering field, including roadway design, street design, sanitary sewer design, storm sewer design, site development, grading plans, storm hydraulic modeling, water tank design and structural steel design. He has worked with City, County, and State projects under different funding agencies such as TDRA and TxDOT and has diverse permitting experience with government agencies like TxDOT. He has worked with construction general requirements as UL Rating Requirements and OSHA Requirements. Experience of work with governmental norms regarding construction such as IBC2006 (International Building Code), UBC97 (Uniform Building Code), 2007CBC (California Building Code). TCEQ, American Water Works Association, TxDOT Manuals, El Paso Ordinance, City of El Paso Drainage Manual, Design STD Manual for Water, Wastewater and Reclaimed Water System.

Project Engineer

Leticia Rubio, EIT - BS Civil Engineering

Leticia has 3 years of experience in civil engineering projects. She has accomplished NASSCO trainings and certifications for condition assessment coding of pipelines, laterals and manholes. Ms. Rubio has comprehensive experience managing databases to properly, plan, prioritize project conditions. In addition, Leticia is skilled in developing bid documents and specifications for different TxCDBG projects administered by TDA. Leticia is adept in assessing structures and preparing technical reports.

SUE Director

CST II: 1217-5870

John R. Barnes - BS Surveying Engineering

John has experience in surveying and subsurface utilities engineering. He has knowledge of technological advances, principles, and practices of SUE. Oversees the phase/task management of the SUE portion. Directs crews in SUE projects while coordinating with Survey and CADD staff to ensure proper collection of field data. Makes sure of compliance to ASCE CI-38-02 and meeting client's expectations. Experienced working with & utilizing existing utility standard designs, and adept to working with utility companies to coordinate design conflict resolution plans.

Construction Manager

Humberto Arenas, EIT, CFM

Humberto has 24 years of combined work experience in civil engineering and construction management, with specialized experience in engineering, construction management, and project management. He holds a degree in civil engineering. Huberto is a Certified Floodplain Manager in Texas. His experience in construction management is comprehensive consisting of on-site supervision of construction work, coordinating with contractors & client development, management direction for construction projects, overseeing all phase of construction, managing owner relations, quality control, safety, scheduling, and executing to the project budget. Huberto is skilled in cost-benefit analyses and other statistical analyses relating to project labor and material specifications. He has extensive knowledge in hydrology and hydraulics, transportation engineering, traffic engineering, and utilities. He has vast experience in design and management of urban streets, intersections, and related design projects. He is proficient in programs: Procore. AutoCAD, MicroStation/Geopack, Microsoft Project, Primavera/SureTrack, Monday, Microsoft Office, RMS/QCS, U.S. Army Corps of Engineering, and Heavy Job HCSS.

Senior Designer

CST II: 0414-4933

Carlos Mendoza, CST II - AS Civil Drafting, Civil Advanced Computer Drafting, Civil Drafting and Design

Carlos has over 25 years of extensive project experience in AutoCAD, Drafting Operation, and Automation and Supervision of design plans for field construction. He has been the senior engineering designer, responsible for the automation of projects to include:water supply and distribution design, water line design, sanitary sewer design, drainage design, wastewater treatment plant design, highway/street design, hydraulic studies, field engineering notes, amongst other projects.

GIS Analyst

CST III: 12082

Misael Perea, CST III

Misael began his experience in the field of engineering as a resident project representative in construction projects in Mexico. Misael has more than 7 years of experience as a GIS and Survey Technician and has performed various water and drainage, surveying, and construction projects. He has performed numerous projects with unmanned aerial vehicles (drones) and GIS mapping and data management. He is knowledgeable in Pix4D and ArcGIS software. Mr. Perea provides GIS solutions to help manage and execute engineering and surveying projects.

Survey Coordinator

Saul Alva, CST II

CST II: 0415-4815

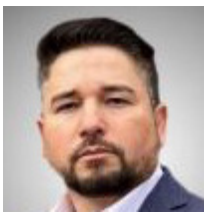
Saul has 24 years of experience in the engineering and surveying field. Real-Time & Post Processed GPS Surveying Training. He has extensive project experience in boundary surveys, preparation of legal descriptions, preparation of metes and bounds, utility location surveys, horizontal and vertical control surveys, easements and right-of-way plats and documents, survey for design, topographic surveys, survey for construction, as-built surveys, and GPS surveys.

Geotechnical Engineer

Bernardino Olague, PE, PMP - M.S. & B.S. Civil Engineering

PE TX: 81628
NM: 13301
AZ: 35578

Bernardino has 31 years of experience in the field of geotechnical engineering, with client experience in both private & public sector. Moreover, Mr. Olague is a Project Management Professional certified by the Project Management Institute (PMI), an accreditation he obtained in 2017. He has led and served as the geotechnical engineer of record of over 2,000 projects. Furthermore, he has also served as principal geotechnical engineer for multi-story medical and institutional buildings; and, most recently, he was lead geotechnical engineer for EPWater's Roberto Bustamante Wastewater Treatment Plant 2022 Expansion Project.



Transportation Engineer

Omar Moreno, PE - B.S. Civil Engineering

PE TX: 121230
AZ: 47053

Omar has 21 years of experience in transportation including planning, designing, constructing, commissioning and maintaining infrastructure projects. Omar has worked on various construction projects for TxDOT and the public sector as a project manager, construction engineer, and traffic engineer. Omar has experience managing daily construction operations for projects, identifying alternatives, resolving challenges, and reporting progress. His duties include supervising field inspections and records, ensuring contractor compliance with TxDOT or municipality standards, and monitoring project phasing and traffic control plans. Omar implements a project safety program and ensures OSHA compliance.

SUE Engineer

Tim Sullivan, PE - B.S. Civil Engineering

PE CO: 29225

Tim has experience in SUE, new construction, engineering design, renovations, environmental and radiological remediation, mining, and operation & maintenance projects. He has extensive knowledge working with contractors to execute and complete engineering designs and plans; ensuring adherence to project budget, schedule, work specifications, quality standards, and safety procedures and practices; reviewing change orders; reporting and presenting project status to
clients, regulators, and stakeholders; staffing and coordinating fieldwork with craft labor and contractors; and resolving technical on-site issues.

b. Name, address, telephone number, of the principal of the firm responsible for administration of the contract. List subcontractors, including addresses, qualifications and areas of responsibility.

Contract Administration

Javier Acosta, PE, PTOE, CFM
Vice President
1130 Montana Ave.
El Paso, TX 79902
(915) 533-4600

Subconsultants

2101 E. Missouri Ave., Suite B
El Paso, TX 79903
Phone: (915) 781-1532

LOI Engineers will support our team with geotechnical and environmental services. LOI is an El Paso-based minority firm solely engaged in the delivery of geotechnical engineering, geosciences, and construction materials testing services. FXSA and LOI have worked together on numerous projects for clients such as El Paso Water, Lower Valley Water District, school districts, City of El Paso, and other municipalities and counties.

404 Executive Center Blvd.
El Paso ,TX 79902
Phone: (915) 351-1900

JMT will support our team with transportation engineering. JMT is multidiscipline engineering/ architectural firm, offering an array of planning, design, and construction phase consulting services since 1971. FXSA and JMT have a great teaming relationship and have previously worked together on TxDOT projects in Reeves County and Midland, Texas.

1990 E. Lohman Ave.
Las Cruces, NM 88001
Phone: (385) 347-9577

SAM will support our team with SUE Level A. SAM offers life-cycle support to the design, development, and construction of transportation and infrastructure projects. SAM offers complete professional services intended to provide deliverables that can be utilized as base mapping for new development, as-builts, BIM modeling, and records. FXSA and SAM have teamed up for several federal pursuits.

c. Location of offices where the work will be performed and percent to be performed at each.

1130 Montana Ave.
El Paso, TX 79902

75% of the work will be performed at our headquarters office

2101 E. Missouri Ave., Suite B
El Paso, TX 79903

10% of the work will be performed at LOI El Paso office

404 Executive Center Blvd.
El Paso, TX 79902

10% of the work will be performed at JMT El Paso office

1990 E. Lohman Ave.
Las Cruces, NM 88001

5% of the work will be performed at SAM Las Cruces office

d. Name, address, and NM registration of the professional responsible for and in direct charge of the work.

Project Manager

Javier Acosta, PE, PTOE, CFM
Vice President
El Paso Headquarters
1130 Montana Ave.
El Paso, TX 79902
New Mexico Professional Engineer: 19976

The FXSA Team is experienced with rapidly meeting surge demands to ensure continuity of services and operations.

EVALUATION CRITERIA 3. PERFORMANCE OF THE FIRM

Description and name of a total of three past contracts similar to the scope herein that have been completed by the firm including the name and telephone number of the contact person for each project.

1. City of Roswell, Country Club Road Feasibility Report - Roswell, NM

Contact Person: Louis Najar, PE, City Engineer
Phone: 575-637-6281
Completion: April 2023

FXSA, under a City of Roswell on-call contract, performed engineering services for Country Club Road (County Road 90) located in Roswell, New Mexico. The segment of roadway is approximately 1 mile in length from N. Sycamore to N. Montana/N. Union Ave. The ***proposed roadway*** will have 2 lanes in each direction, sidewalk and curb & gutter. FXSA performed a ***feasibility report*** that quantified and evaluated existing conditions. The report provided the information needed for the City of Roswell to make informed decisions about the design and construction of the roadway. The Feasibility Report included conducting record research (easements and ROW acquisition), existing conditions, considerations and recommendations for design and traffic capacity, coordination & planning. FXSA also conducted a ***Master Drainage Study*** that included analysis of the existing drainage and watersheds, analysis of the proposed developments, recommendations for drainage for the proposed roadway, drainage details, hydraulics, and 100 year flood design. Services also encompassed providing cross-sections and ADA ramp design for intersections. FXSA is currently working on the ***design plans & specifications*** for the Country Club Road. FXSA has performed topographic survey for the project limits as well.

2. Lower Valley Water District Fenter Road & North Loop Water & Sewer Line Design - Socorro, TX

Contact Person: Ed Long, PE, Chief Operations and Technical Officer
Phone: 915-791-4480
Completion date: In progress

The project consists of design & construction of 20,000 L.F. of a 12-inch ***water line*** and 8" ***sewer line*** along North Loop Drive in Socorro, TX. It will include 14 bore and case crossings along North Loop Drive at a maximum depth of 15 ft. and the proposed alignment invert elevation is estimated to run 6 to 7 ft. below ground surface. Reconstruction of streets may be ancillary to the project. FXSA conducted control survey using Virtual Reference Station, ***topographic/planimetric survey*** of the site and requested ROW & as-built information from TxDOT and client, to work on preliminary design of sewer and water lines. FXSA also obtained all necessary permitting. Moreover, FXSA performed ***SUE Quality Level A*** with 26 borings to a depth of 10 ft. and 28 borings to a depth of 25 ft, including traffic control. Project highlights: Pressure zone improvements within the LVWD water system and water service to 3,500 new homes. SUE along the pipeline corridor for high pressure gas lines. ***Hydraulic analysis*** of existing water lines to determine adequacy of service to the area. Permitting coordination with multiple agencies: EPWID#1, TCEQ, EPA, and TxDOT. Coordination with EPWID#1 due to the corrosion of the irrigation channels and with TxDOT, including traffic control for North Loop. Coordination with subconsultants for a new subdivision service connection. Project required dewatering to avoid conflict with the water table, since it is above the location of the new water and sewer systems.

3. Gracen Engineering & Construction, Santa Teresa Border Industrial Park Grading & Drainage - Santa Teresa, NM

Contact Person: Michael Sambrano, GRACEN
Phone: 915-228-2298
Completion: June 2021

FXSA performed engineering and surveying services for construction design. Project consisted of performing topographic survey of 11.564 acre tract, measure spot elevations on 50 feet by 50 feet grid, locate & measure all existing visible improvements on subject tract, locate & measure all visible, above ground utilities within survey limits, measure all drainage structures, culverts, channels, and arroyos within survey limits, grading plan, SWPPP, and drainage calculations. Project included coordination with Dona Ana County and ***FEMA for permitting.***

PROJECT ASSIGNMENT AGREEMENT

23-24-050 CIVIL ENGINEERING SERVICES

PROJECT NAME

Pursuant to terms and conditions of City of Las Cruces (CITY) Contract No. 23-24-050 dated June 1, 2024 between the CITY and Frank X. Spencer & Associates, Inc. (ENGINEER), as amended and incorporated herein by reference, the City and Contractor hereby agree on this _____ day of _____, 20___, as follows:

1. In a satisfactory and proper manner, the ENGINEER shall perform SERVICES as proposed in response to the CITY's RFP No. 23-24-050 and ENGINEER's proposal as set forth in ATTACHMENT A attached hereto.

2. The estimated completion date is number days after a Notice to Proceed is issued by the CITY to the ENGINEER.

3. In consideration for the satisfactory completion of the work agreed to herein, compensation shall be made in the amount of $dollars.cents, plus NMGRT. Invoices issued by the ENGINEER shall be made monthly / upon completion of project with payment by the CITY being made within 30 days upon receipt of undisputed invoice.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Horrocks Engineers, Inc., of 2162 W Grove Parkway, Ste 400, Pleasant Grove, UT, 84062, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Horrocks Engineers, Inc. 2162 W Grove Parkway, Ste 400 Pleasant Grove, UT 84062 ATTENTION: Habib Abi-Khalil

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

COST PROPOSAL

ATTACHMENT C – COST PROPOSAL FORM RFP 23-24-050 – Civil Engineering Services
(NOTE: This form shall not to be modified in any way)

Consulting Firm _____

ITEM	DIRECT LABOR / CLASSIFICATION	HOURLY RATE*
1	Principal Engineer	$ 300
2	Project Engineer/Project Manager	$ 230
3	Senior Engineer	$ 240
4	Design Engineer	$ 180
5	Engineer Intern	$ 150
6	Engineering Technician	$ 130
7	Drafting Technician	$ 150
8	Survey Crew**	$ 140
9	Construction Inspector/Observer	$ 130
10	Administrative/Clerical	$ 120
11	Field Testing and Investigations	$ 130
		PERCENT MARKUP
12	Subcontractor Cost Markup	(%) 20%
ITEM	**MATERIALS / REIMBURSABLE EXPENSES**	**RATE**
	Travel	
13	Per Diem (per day) – Pre-Approval Required	City of Las Cruces Rate
14	Vehicle Mileage Rate (per mile)	Current IRS Rate
	Reproduction Services	
15	Black and White Copies (per copy)	$ at cost
16	Color Copies (per copy)	$ at cost
17	Prints 24x36 (per sheet)	$ at cost
18	Mylars 24x36 (per sheet)	$ at cost
19	Photo Quality Plots (per plot)	$
	Miscellaneous	
20	Any other costs incurred	Case by Case Basis

**Rates are to include all overhead costs and any and all assessment expenses*

***Survey Crew Rates are to include GPS and Total Station Equipment*

Notes: 1. Detailed man hour Estimates are required for T&M contracts and are to utilize corresponding rates

2. Rates in place at the time a project is contracted with the City will remain for the duration of the contract.

CITY OF LAS CRUCES

RFP NO. 23-24-050
FEBRUARY 27, 2024

PROPOSAL FOR

CIVIL ENGINEERING SERVICES

Horrocks

TRANSMITTAL LETTER

February 27, 2024
City of Las Cruces
700 North Main Street
Las Cruces, NM 88001
Via email to: bidclerk@las-cruces.org

RE: Civil Engineering Services for the City of Las Cruces

Dear Members of the Selection Committee:

Horrocks appreciates this opportunity to present our proposal for the City of Las Cruces (the City) Civil Engineering Services contract. Our proposal provides responses to the subject RFP and the requested civil engineering related services. Horrocks offers comprehensive planning and design services for civil engineering projects. Our continued expansion throughout New Mexico has required significant additions to our staff including engineers, project managers, and surveyors based in our state offices. This growth shows our committment to increasing both capacity and scope of our locally offered services.

Our Las Cruces office opened in 2022 to complement our Albuquerque and Santa Fe offices and provide southern New Mexico with engineering services to support the local communities. The Las Cruces office is currently staffed with nine professionals, including two senior engineers who are supported by junior engineers and technicians and backed by a more than 820-person team of professionals within the Horrocks organization. Our clients can attest to the integrity, ingenuity, and responsiveness we provide. Our proposal includes information about our key personnel's expertise, and other information that demonstrates our ability to serve the City through this on-call contract. The City's success is our success, and we will strive to effectively complete projects by working hard, working efficiently, and providing exceptional service and high-quality deliverables. We are excited to serve the City on any task assignment, large or small.

Our Principal-in-Charge, Habib Abi-Khalil, PE, is authorized by Horrocks to contractually obligate the organization and negotiate the contract on behalf of the organization. The direct point of contact for the duration of this on-call contract is Las Cruces-based, Alonzo Martinez, PE, who has over 10 years of engineering experience. Alonzo has delivered professional engineering services to the City since 2021. Alonzo has helped the City deliver infrastructure projects including the High Intensity Activated Crosswalk (HAWK) Signal on University Avenue. As shown in our proposal, Alonzo has managed on-call contracts for many agencies throughout New Mexico and is excited to work with the City on future tasks. Horrocks acknowledges the receipt of Addendum No. 1 on February 21, 2024 and Addendum No. 2 on February 23, 2024.

Sincerely,

Habib Abi-Khalil
Principal-In-Charge | Horrocks

INDEX

1. Technical Approach 1
2. Qualifications and Competence 8
3. Performance of the Firm 9
4. Compliance Declaration 14

EVALUATION CRITERIA NO. 1

TECHNICAL APPROACH

A. DESIGN

TRANSPORTATION FACILITIES

Transportation facilities play a crucial role in ensuring the efficient movement of people and goods. Our roads, highways, bridges, railways, airports, and public transportation systems provide the necessary infrastructure for various modes of transportation. **Leading our transportation efforts with the City, Alonzo Martinez, PE, is experienced in all facets of transportation-related projects and roadway infrastructure project mangement.**

ROADWAY DESIGN - PRELIMINARY & FINAL

Horrocks has demonstrated roadway design expertise at many levels from concept through final design. We have successfully completed projects across New Mexico showcasing our range of capabilities from high-volume urban facilities to low-speed rural roads. We adhere to each applicable roadway design standard including the American Association of State Highway and Transportation Officials (AASHTO) Green Book, AASHTO Roadside Design Guide, and Manual on Uniform Traffic Control Devices (MUTCD). City reference materials are comprised of standard drawings, design directives, standard and supplemental specifications, and special provisions. Our plan preparation will follow the City's design formatting guidelines. Our local experience in the Town of Edgewood for projects like Church Street Improvements, used many similar tactics we will employ with the City.

Our roadway design plans provide a comprehensive look at the project to determine the project phase and requirements of the site. From there, our team will use cover, title, and quantity sheets, surfacing schedules, notes, and survey control to keep project elements on track. Our professionals work with drainage systems like Storm Water Polution Prevention Plan (SWPPP), roadway and intersection plans, special details, grading plans, traffic control, and earthwork, as needed. Our team is well-versed in cross sections, utility plans, final cost estimates, and any provisions based on project requirements. For milestone submittals, we will prepare a detailed construction cost estimate, that utilizes average unit prices for City bid items, assemble project special provisions, and schedule a design inspection meeting with the City's staff and stakeholders. All comments and changes during this time are documented and provided to the City.

COMPLETE STREETS AND MULTI-MODAL DESIGN

Horrocks is well-versed in Complete Streets and Multi-Modal Design principles, aligning well with Las Cruces' Complete Streets ordinance aimed at improving traffic safety and providing more multi-modal options to residents. Along with the ordinance, Horrocks uses Public Right-of-Way Accessibility Guidelines (PROWAG), AASHTO, and National Association of City Transportation Officials (NACTO) design guidelines for pedestrian and bicycle facility design. Our team delivers context-sensitive designs while addressing engineering, environmental, and constructability constraints properly. We excel in ADA-facility design for pedestrians and have extensive experience in multi-use trail planning and design to develop collaborative solutions that address community concerns. The Multi-Use Trail Design Segment 2, located in Santo Domingo Pueblo in NM has shown our complete streets and multi-modal design practices while working with the communities around Horrocks.

Finished bike trail for the Multi-Use Trail Design Segment 2

Our team's valuable experience in ADA-facility design for pedestrians stems from a group of passionate cyclists who understand bicycle facility guidelines, but also are aware of the challenges faced by wheelchair users and cyclists alike. With a wealth of experience in multi-use trail planning and design, we are well-versed in the design requirements outlined in AASHTO and PROWAG guidelines. Having a local office provides us a better understanding of the needs and concerns of local residents ensuring a collaboration on the solutions that work best for all.

Traffic Design - Preliminary & Final

In traffic design, the Horrocks' team excels in interchange and intersection evaluation, traffic control plan development, traffic signal design, lighting analysis, permanent signing and striping design, access modifications, ADA/PROWAG compliance, traffic operations analysis, and traffic impact analysis for land development. Our team has the expertise to conduct comprehensive studies across diverse traffic scenarios, ensuring informed decision making based on accurate data collection and analysis. Horrocks' proficiency in traffic analysis methodologies will ensure our plans and design meet the needs of the City and their community.

Our team is skilled in all aspects of traffic analysis including highway capacity, signalized and unsignalized intersections, roundabouts, limited-access facilities, crash studies, and traffic signal warrants. We understand the types of input data required to complete traffic analyses and are familiar with the methodology to collect traffic counts, signal timing, and crash data.

Horrocks uses Synchro with SimTraffic for signalized intersection analyses, Highway Capacity Software for unsignalized intersections, and SIDRA and RODEL for roundabout evaluations. Synchro will be used to develop traffic signal system coordination and timing plans. If a complex simulation requires public review of proposed solutions, our team is well-versed in VISSIM, a traffic micro-simulation model. Our traffic engineers will guarantee the utilization of accurate data inputs for all analyses and each will be documented showcasing our methodology and the results.

STORM DRAINS

Maintaining existing infrastructure is a challenge for every municipality and requires occasional assessment and repair of water, wastewater, storm drain, and other utility systems. **Our professional engineering staff and our Drainage Engineer, Trevor Graff, PE, have extensive experience, expertise, as well as an understanding of the necessary structural and operational evaluation of existing sewer and storm drain pipelines.** Trevor and the Horrocks team bring storm drain expertise to contracts with the City such as University Avenue HAWK Signal Crossing. That experience includes providing all aspects of sewer system master planning, hydraulic and service area analyses, condition assessment studies, GIS mapping and data analysis, collection design, rehabilitation services, and construction inspection. In addition, we provide all the necessary services including right-of-way (ROW) engineering and 3D modeling to prepare plans, specifications, and bid documents.

We are knowledgeable in and have experience rating the condition of sewer and storm drain systems and manholes using the National Association of Sewer Service Companies (NASSCO) Pipeline Assessment Certification Program (PACP) and Manhole Assessment Certification Program (MACP) condition rating systems. Horrocks has performed condition assessments for hundreds of miles of sewer and storm drain pipes. Our certified engineers have specific training and experience in asset management, CCTV condition assessment, capital improvement planning prioritization, and trenchless construction methods such as cured-in place pipe (CIPP), slip-lining, pipe bursting, horizontal directional drilling, pipe ramming, and jack-and-bore. We use this knowledge and expertise to compare the advantages and disadvantages of many options, helping save money and time and reducing impacts.

Example of a storm drain project along US-89 in Utah.

Horrocks' drainage staff has the resources required to address all elements of a storm water design project, including hydrologic and hydraulic (H&H) modeling, sediment transport, water quality, low impact development (LID) methods, erosion control, bridge scour analysis, floodplain management, design plan development, and construction support. Our engineers have expertise in the following:

- Use of the latest H&H methodologies and software such as Rational Formula, AHYMO, HEC-HMS, FLO-2D, HEC-RAS, HEC-RAS 2D, SRH 2D, CulvertMaster, HY-8, and FlowMaster
- Design of storm drain systems using StormCAD and AutoCAD Civil 3D

- Sediment transport analyses using HEC-6
- Design of detention/retention ponds and underground storage chambers using HEC-HMS and Pondpack
- Floodplain management including development of CLOMR/LOMR's
- Knowledge of the Environmental Protection Agency's (EPA) National Pollutant Discharge Elimination System (NPDES), SWPPP, MS4 Watershed Permit, and the development of associated required forms and plans

Furthermore, we specialize in the design and upgrade of existing stormwater systems for private, municipal, and transportation drainage projects. From debris basin, collection system, and water quality improvements, we excel in floodplain management to safeguard infrastructure, homes, and our natural water systems from potential damage caused by fires and/or flood.

UTILITIES

Our engineers are experts in the design and development of drinking water facilities, industrial water, irrigation, secondary irrigation, sanitary sewer, and water and wastewater treatment facilities. We can also provide services for the management and coordination of gas utilites. **Patrick Stewart, PE, joins our team as the Utilties Lead and brings his 33 years of experience in water and wastewater engineering.**

Horrocks working on a NMDOT SUE On-Call task

Water

As communities grow, the need for sustainable water management expands accordingly. We provide planning, design, and construction management for all components of sewer collection systems including lift stations and force mains, pump stations, pipelines, and treatment facilities, each specifically tailored to meet the needs of the project.

Horrocks has a full range of qualifications and experience with sewer collection and treatment systems. Our experience includes master planning, modeling, funding, permitting, surveying, treatment, design, construction management, and inspection for all types of sewer projects. Our team brings the necessary engineers, surveyors, technicians, and drafting experts to provide efficient sewer modeling, flow measurement, design, and construction management.

Horrocks assists clients with their industrial stormwater pollution prevention/plan (ISWPP/P) and offers a uniquely qualified team to help agencies develop site rehabilitation strategies and solutions to ensure compliance with increasingly stringent industrial Multi-Sector General Permit requirements.

Wastewater

Horrocks designs advanced facilities such as headworks, raw water metering, biological nutrient removal, clarifiers, digestion, aeration basins, sludge and biosolids holding, equalization basins, diversion structures, drying beds, compost facilities, disinfection (UV chlorination and dechlorination), outfall design, air blower equipment, and process and instrumentation. We use hydraulic modeling and secondary lift stations to optimize waste treatment processes. Furthermore, we perform National Environmental Policy Act (NEPA) and State Environmental Policy Act (SEPA) permitting while working through the regulatory agencies to comply with national and state requirements.

Natural Gas and Energy

We recognize that gas utilities play a crucial role in providing a reliable and efficient engery source for businesses and households throughout the City. Our services include pipeline location, damage inspection, system patrolling, and hazard prevention. Gas utility designers play a crucial role in ensuring the efficient and safe operation of gas distribution systems.

We facilitate utility coordination, prepare relocation estimates and agreements, and conduct field visits to gather utility information. By prioritizing infrastructure integrity, safety protocols, and regulatory compliance, we contribute to the dependable and efficient delivery of natural gas to our clients.

SITE DEVELOPMENT

Horrocks has provided our site development services on projects throughout the western United States for the last three decades. **Leading our Site Development**

efforts is Kevin Salcido, PE. He brings 29 years of experience leading site planning, infrastructure design, environmental assessment and obtaining necessary permits and approvals throughout project lifecycles. We understand the critical role of site development review in the planning and design process of a construction project. Kevin and his team have a proactive approach to allow for a comprehensive assessment of the proposed site to ensure that it meets all the necessary requirements and regulations. During the site development review, various aspects such as zoning, land use, environmental impact, and infrastructure are carefully evaluated. Additionally, site development review ensures that the project aligns with the overall goals and objectives of the community and promotes sustainable and responsible development.

The site development review process typically involves collaboration between the City and various stakeholders, all of whom bring their expertise to ensure adherence to applicable codes and regulations. This approach provides an opportunity for public input and engagement, allowing community members to voice their concerns or provide feedback on the project. By conducting a thorough site development review, potential risks and challenges can be resolved early, keeping the construction process smooth. Our goal is to create sustainable, planned infrastructure that works for the community's needs and aspirations of businesses and residents alike.

ENVIRONMENTAL INVESTIGATIONS AND STUDIES

Horrocks brings advanced experience in environmental documents required by NEPA. NEPA documentation is required to ensure transparency with the public prior to the infrastructure initiative. **Nicole Tolley, PE, leads team in our environmental studies efforts, spearheading comprehensive investigations and studies to generate required documents.** With over two decades of applicable experience, Horrocks continues to document diverse environmental resources and impacts across the communities we serve, ranging from biological resources and water quality to hazardous waste and environmental justice issues. We are committed to continually learning and innovating in order to fulfill our clients' needs.

To ensure consistent, quality documentation, we adhere to a stringent quality control process and hold regular internal and project team meetings. The purpose of these meetings go beyond reporting. We utilize this time for effective collaboration with project owners and stakeholders to coordinate project direction, address challenges, resolve conflicts, and accommodate specific project requirements.

We have the staff and resources necessary to produce any environmental document document the City may need and frequently produce the following document types:

- Environmental Impact Statements (EISs)
- Environmental Assessments (EAs)
- Categorical Exclusions (CEs)
- State Environmental Studies (SESs)

SUBSURFACE UTILITY ENGINEERING (SUE)

Horrocks has provided complete, in-house SUE services for 17 years, cultivating a well-trained, experienced staff who can perform all aspects of SUE consistent with ASCE 38-22 standards, Quality Levels (QLs) D, C, B, and A. **Our SUE Lead, Ryan McDonough, and his team of experienced staff understand the importance of providing accurate utility information early in the development of projects.** Utilizing their extensive experience, our SUE team conducts conflict analysis to identify locations where utility mitigation is needed. This approach enables designers to naviagate potential conflicts efficiently, ultimately minimizing the need for unnecessary utility relocations.

Our SUE team's streamlined scheduling and documentation techniques allow us to keep projects moving forward with minimal disruption to the project site. Our local staff is equipped with the skills and equipment to perform any anticipated SUE services, maintaining flexibility and efficiently thoroughout the project timeline.

Horrocks team member completing SUE tasks with VAC truck

CONSTRUCTION CONTRACT ADMINISTRATION

Our Project Manager (PM), Alonzo Martinez, PE, will lead construction administration efforts with the City. We understand the importance of timely decisions during active construction phases. Our team members are ready to serve the City by facilitating decision-making, efficiently coordinating with contractors, and alleviating all possible burdens. Alonzo brings extensive experience in maintaining up-to-date construction contract services.

We will assign the appropriate team member to evaluate construction-contract-related requests. If needed, we will discuss with other team members or the City to produce an accurate, beneficial responses. We will work to provide resources to accomplish contract goals and will communicate a clear timeframe with the City.

In contract administration, Alonzo and his team thoroughly review the contractor-proposed cost savings and price adjustments. The team then gathers relevant facts to understand the requests of the project including field conditions, the original contract, previous commitments, and potential utility conflicts. We document all findings and share them with the City promptly. We also offer support by facilitating meetings, presenting justifications, and preparing documentation.

LAND SURVEYING ACTIVITIES

Horrocks has an experienced New Mexico survey group who works closely with other disciplines within our office to provide seamless services on projects. We use cutting edge technologies including mobile LiDAR, static LiDAR, and SLAM LiDAR in addition to aerial LiDAR, RGB orthoimagery, multispectral imagery, and high-definition video capture from UAV (drone) platforms. Our comprehensive range of services includes re-tracing and/or staking alignment(s), horizontal and vertical control, level surveys, cross-sectioning, topographical surveys, ROW searching and field locating, property description searching, locating and surveying section corner searches, and survey title work.

The project control survey will be certified by our Survey Lead, Jacobo Pacheco, PS, CFedS, a New Mexico registered land surveyor. The Horrocks survey team is outfitted with the latest conventional survey equipment such as GNSS, robotic total stations, and digital levels. Our survey team maintains meticulous records and prepares survey-related exhibits, aerial target placement, LiDAR, boundary, laser scanning, as-built, hydrographic, and construction surveys. Our full-service surveying and mapping staff enables us to provide field-to-finish surveying support for any engineering project.

With our combination of advanced capabilities and expertise, Horrocks delivers a wide array of surveying and mapping services cost-effectively, utilizing the most suitable tools and technologies tailored to each task assignment.

Horrocks team member gathering survey data.

DRAINAGE REPORTS AND FLOOD STUDIES

We create storm drain master plans to meet cities' and counties' current and future flood prevention plan needs. We understand that the type of study or report that is needed will depend on the individual task. We will begin by meeting with the City to determine the hydrologic and hydraulic methods to be used for the analysis. Our team will prepare the appropriate documentation that could include a FEMA flood study to determine flood risk and develop floodplain maps, reports, plans or forms as needed and submit them to the appropriate agencies and the City. **Our local drainage team is led by Trevor Graff, PE who has over 10 years of direct drainage experience. He is highly fluent in all hydrologic and hydraulic software analysis tools commonly used in New Mexico.** Horrocks utilizes drainage reports and FEMA flood studies to inform various aspects of our work:

- **Planning and Design:** Assessing existing drainage conditions and flood risks to inform the design and placement of drainage infrastructure.
- **Hydrologic and Hydraulic Analysis:** Conducting modeling to determine water flow rates, volumes, and potential flood extents, aiding in effective drainage system design.
- **Compliance with Regulations:** Ensuring designs meet local, state, and federal regulations including FEMA regulations for obtaining necessary permits.

- **Mitigation Strategies:** Developing strategies, such as flood control structures or natural floodplain management techniques, to reduce flood risks and protect infrastructure.

Horrocks relies on these reports and studies to enhance drainage design, ensure regulatory compliance, and implement effective flood mitigation measures.

DESIGN OF AIRPORT FACILITIES

Our aviation team is lead by Lee Underwood, who has over 40 years of experience working with local, state, and federal entities on various airports. We excel in planning, design, construction, and execution of airport-related services. Our personnel are registered in multiple states with experience in program management, Navigational Aids (NAVAIDS), terminal airside/landside, grant management, and more. Horrocks has provided design and construction phase services that include the reconfiguration of large expanses of pavement at taxiway intersections which increased airfield safety, and reconstruction and expansion of a 135,000-square yard aircraft holding pad in addition to upgrading main gates, reconfiguration of storm drains, utilities, and fencing.

B. EXPERT WITNESS IN A JUDICIAL SETTING

Horrocks has qualified staff who have provided their expertise in a judicial setting as an expert witness. The expert witness plays a crucial role in providing specialized knowledge and opinions to assist the court in understanding complex issues. Expert witnesses are often selected based on their qualifications, reputation, and experience in their respective fields. They are called upon to provide objective and unbiased opinions developed from their knowledge and analysis of the evidence presented.

The expert witness serves as a valuable resource in helping the court navigate technical or specialized aspects of a case and arrive at a well-informed judgement. Some examples where Horrocks staff has served as expert witnesses are for the **Attorney General of the State of Utah on behalf of Utah Department of Transportation, Arizona Department of Transportation, and the Utah District Attorney's Office.**

C. PROJECT MANAGEMENT

Horrocks has a staff large enough to offer specialty expertise and complete substantial engineering projects, while remaining nimble enough to complete any project, no matter how small the scope. This enables us to be responsive to the needs of each project, regardless of size or complexity. The cornerstones of our management philosophy are communication and documentation which focus on external communication with the City and internal communication within the team. We utilize video conferences and web-based tools including dashboards and interactive GIS apps to coordinate work efforts, allocate resources, and follow up on action items. Proper documentation is a crucial element of project management, especially for key decisions that influence a project's outcome. Our team members have filled engineering resource augmentation service (ERAS) positions with agencies as Project Managers in the past and fully understand the impacts and implications. We have found that by working collaboratively with agency leadership to forecast ERAS needs, we can consider options such as using the resources of our team, adding resources in specific focus areas for projects, or adding additional subconsultants to our team to best position us to respond to any need.

D. CONSTRUCTION INSPECTION

Horrocks has provided comprehensive construction engineering and inspection services for federal, state, and local projects for more than three decades. Members of our staff have the required training, qualifications, certifications, and proven track record to successfully complete construction inspection services.

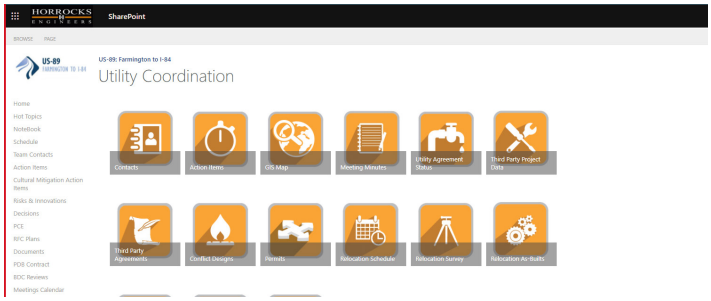
Construction inspection personnel provide continuous, on-site monitoring of the contractor's work, resolve issues that arise, and conduct meetings from bid opening to project closeout. On-site personnel monitor the contractor's work for safety, adherence to traffic control plans, and compliance with plans and specifications. Our inspectors are trained to identify and find solutions to potential construction problems or conflicts. Our staff regularly uses ProjectWise, AAHSTOWare Project Construction Module, and QASP Version 1.1.1 to manage project data as well as Microsoft Project software to monitor construction schedules. These tools are instrumental in keeping projects on track and maintaining effective coordination between the client, contractor, and inspection team. We have successfully completed over 50 task orders for NMDOT through our Staff Augmentation On-Call 2020-2024 contract, where we placed certified inspectors, schedulers or specialized staff, as requested.

E. DELIVERABLES

PRELIMINARY REPORTS | The Horrocks team works with preliminary reports to gather and analyze data, assess project needs and requirements, identify potential issues, and develop initial recommendations and proposals. These reports serve as a foundation for further project planning, design, and decision-making. Horrocks will gather and interpret survey results, testing reports, and any other information required by the City at the start of the project. The team will use the information in the preliminary reports to communicate with stakeholders, coordinate with agencies, and ensure that project goals and objectives are planned out and agreed upon.

PROGRESS AND COMPLETION REPORTS | Progress and completion reports are used to track and communicate the status of a project throughout its timeline. These reports provide an up-to-date view of the project's progress including the time billed to projects, percentage of the budget spent, and budget remaining. Reporting early and often during the project facilitates effective communication among project team members and stakeholders. They serve as a forum to coordinate data needs, design decisions, report production milestones, and review design details. Enhanced communication through these reports can lead to an improved design and final product.

Overall, progress and completion reports provide a comprehensive overview of the project's progress, allowing project managers and stakeholders to make informed decisions, address any issues or changes in scope, and ensure successful project completion.



Sample project dashboard

CONSTRUCTION DRAWING AND DOCUMENT SPECIFICATIONS| We are prepared to provide the City with a skilled team of engineers, designers, and CADD technicians adept in modern design software like AutoCAD and Civil 3D, ensuring the production of top-notch construction documents aligned with client standards. Our team is well-versed in programs such as MicroStation and OpenRoads ConceptStation, which offer 3D models and digital deliverables compatible with Automated Machine Guidance (AMG) equipment.

Prioritizing communication and collaboration, we employ various tools like teleconferencing and web-based project dashboards to keep stakeholders informed throughout the process. With expertise in stakeholder coordination, Horrocks conducts project briefings and maintains a web-based contact management database to ensure seamless collaboration and address concerns, ultimately delivering comprehensive and high-quality construction documents.

Horrocks will use the specific requirements and guidelines required by the City in the preparation and formatting of documents. All deliverables in the Scope of Work will be provided to the City with a high-level of detail in formats and specifications. All drawings, documents, analysis, surveys, etc. will be provided via City-approved methods.

QUALITY MANAGEMENT PROGRAM (QMP) | Horrocks realizes that a vigorous quality program has many benefits including improved deliverables and increased protections for both the City and the Horrocks team. Before starting any task or project, we conduct a thorough review to fully understand the requirements and ensure we provide the City with the necessary resources for a successful project.

We establish a quality plan that is based on proven workflows throughout the project lifecycle. This plan will be shared with the project development team and all quality-related documents and reviews. The key elements of our quality plan include:

Initiation: Identify team members and contact information, summarize communication plans, outline project goals and schedules, and communicate project budgets to all team members.

Development: Format deliverables, summarize the control of design documents and their locations, outlining design data.

Quality Control (QC) During Development: Implement a multi-pronged approach to quality verification, conduct independent review of all work deliverables before submission to the City. This includes plan set documents, cost estimates, Design Approval Requests (DAR), public involvement materials, and other necessary materials.

These reviewed are completed within the framework of two tiers:

Tier 1: A standard review that focuses on the specific deliverable being reviewed. This shows whether the deliverable meets its intended purpose.

Tier 2: A more in-depth review that also includes review of materials leading up to the development of the deliverable, such as contract, amendments, environmental documents, and other project communications. This review is intended to confirm whether the project acheived its broader objectives.

Our team is committed to upholding high standards of quality throughout the project timeline, ensuring high quality is consistently achieved.

SCHEDULE MAINTENANCE AND COST ESTIMATING | Horrocks ensures smooth project operations by utilizing specialized software to track budgets and schedules in real-time while also employing tools to manage costs and control spending.

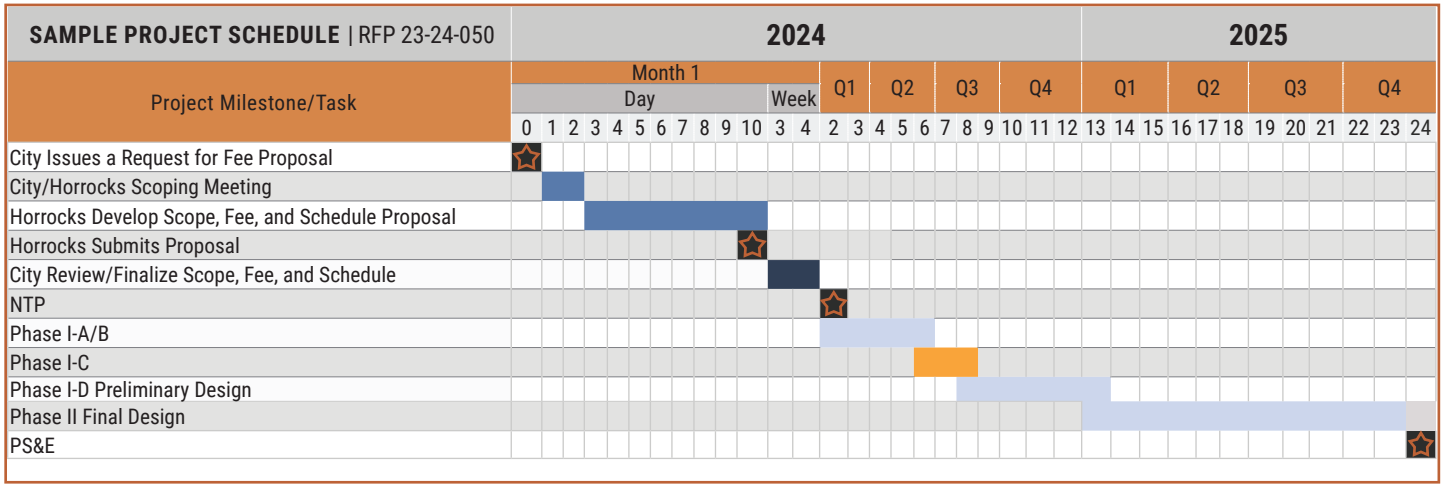
Our team stays on top of the project schedule by holding regular progress meetings to review project status and discuss design or mitigation strategies decisions promptly. Horrocks effectively allocates resources to maintain schedules and mitigate delays, ensuring efficient solutions are delivered to the City on time. Our team's comprehensive approach highlights our commitment to project success and client satisfaction.

Horrocks' relationships with local contractors allows the team to identify the most value-based options that meet current standards. The team also verifies construction pricing through recently bid projects in the surrounding areas which helps determine more accurate pricing to meet the clients' budgets. Horrocks will often seek assistance from our subconsultant partners when completing estimates for portions of the project that require outside expertise.

BAR CHART SCHEDULE | Proper scheduling and planning are critical to a project's successful delivery. Due to the nature of on-call contracts, the needs for each project will vary based on the particular task needed. A sample bar chart schedule, which shows a possible project schedule, is provided for reference. We will work with the City at the outset of each request task to:

- Understand the specific schedule needs.
- Develop a proposed schedule that accomplishes the overall needs and meets critical milestones.
- Communicate throughout the process with the City regarding the schedule status and work progress.

Our team will schedule projects according to their complexity, ranging from simple tasks to larger, more complicated projects that require intricate development and skillful planning. Scheduling software will be used as needed to assist in this process.



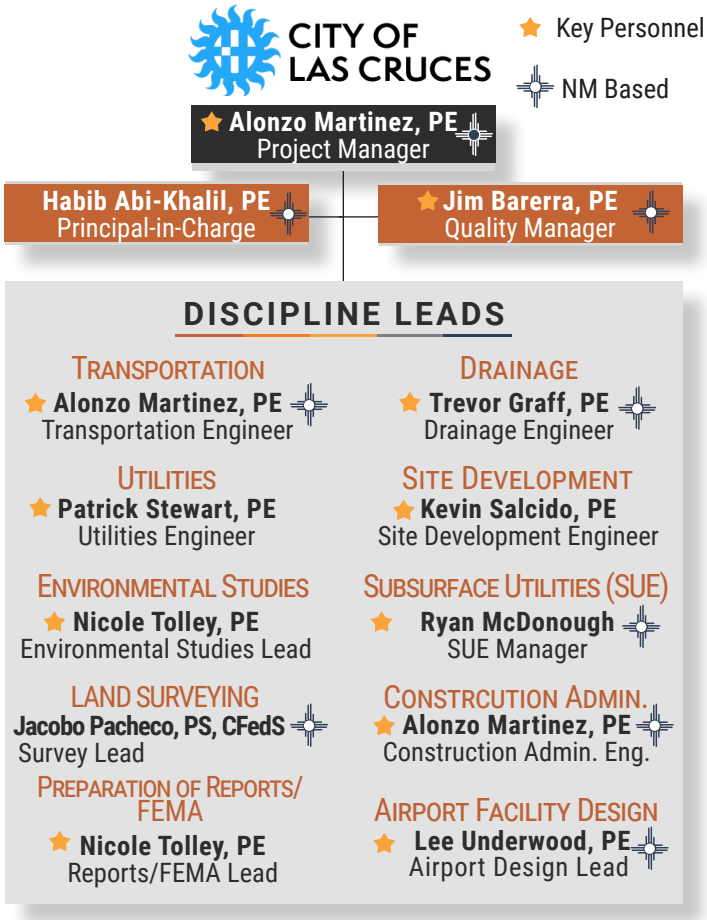
EVALUATION CRITERIA NO. 2

QUALIFICATIONS AND COMPETENCE

A.KEY PERSONNEL

Established in 1968, Horrocks has gained a reputation as one of the premier firms in the western United States for providing quality professional engineering services. We are a mid-sized, regional firm with 820+ employees, including 212 licensed engineers and a complete support staff of technicians, surveyors, public involvement specialists, CADD operators, GIS professionals, and administrative personnel. Horrocks has 21 office locations throughout New Mexico, Arizona, California, Utah, Nevada, Idaho, Colorado, Texas, and Washington.

Each key member included on the Horrocks team can reference their relevant experience while utilizing a well-rounded team of support staff and technical personnel, as necessary, to meet the needs of any project the City may require. The following organizational chart highlights our experienced staff members, followed by brief resumes showcasing our key personnel's experience with relevant projects similar to this on-call.



SUPPLEMENTARY LAS CRUCES STAFF MEMBERS

Adilen Martinez, EIT
Engineering Support

Andres Torres, EIT
Engineering Support

Kris Montoya
CAD Support

Luis Guigon Canseco, EIT
Engineering Support

ALONZO MARTINEZ, PE, MBA
PROJECT MANAGER, TRANSPORTATION ENGINEER, AND CONSTRUCTION MANAGEMENT LEAD

Education: MBA New Mexico State University, BS Civil Engineering, New Mexico State University

Licences: NM PE No. 24647

Availability: 50%

Alonzo has ten years of experience in engineering and project management. His experience includes transportation-related projects and roadway infrastructure project management including planning, design, MOT, construction administration and observation, and project closeout. Alonzo has experience developing plans to manage traffic during constriction, ensuring compliance with the local regulations and safety standards. As the Project Manager for this project, he will be responsible for coordination between the City and the project team. He is certified as a Traffic Control Design Specialist with the American Traffic Safety Services Association (ATSSA) since 2015. Alonzo is based in Las Cruces which will help expedite the team's response time to any issues that may arise.

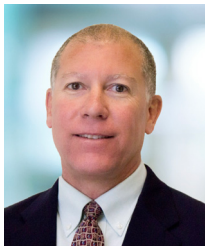
HABIB ABI-KHALIL, PE
PRINCIPAL-IN-CHARGE (PIC)

Education: BS Construction Management and Engineering

Licences: NM PE No. 24647

Availability: 20%

Habib will serve as the PIC responsible for the administration of this contract. Habib has 34 years of engineering experience, most of which was spent with the NMDOT where he served as the Acting District 5 Engineer, the Assistant District Engineer for Engineering Support, Resident Engineer, Project Engineer, Associate Engineer, Assistant Engineer, and Junior Engineer. His extensive experience has given him a very unique and intricate understanding of public works engineering.



JIM BARRERA, PE, PTOE
QUALITY MANAGER

Education: BS Civil Engineering, University of California, Irvine
Licences: NM PE No. 15723
Availability: 30%

Jim is a Senior Engineer with 34 years of experience in transportation and traffic engineering, including expertise in the design of traffic signals, roadway lighting, signing and striping, construction traffic control, and intelligent transportation systems. Jim has been working with traffic in New Mexico since he arrived in 1998 to serve as the Big I Project Traffic Engineer. Through these years of local experience, he has become well-versed local agency design standards and practices. Jim was selected for this project because of his expertise in quality management and the breadth of experience he has.

TREVOR GRAFF, PE
DRAINAGE ENGINEER

Education: BS Civil Engineering, Utah State University
Licences: NM PE No. 25867
Availability: 25%

Trevor has eight years of transportation engineering experience and has been involved in roadway design, construction, and management throughout his time at Horrocks. He is proficient in roadway engineering software and posesses strong analytical and problem-solving skills while remaining familiar with local and state regulations. Trevor has designed hydraulic facilities for various transportation projects, including freeways, interchanges, intercity roadway projects, and rural highways. He has experience with the design of stormwater conveyance systems, culvert crossings, erosion control, and storage and water quality facilities. Trevor excels at utility conflict resolution and cross-discipline coordination. He has completed over a dozen projects in New Mexico and is highly knowledgeable in local requirements

PATRICK STEWART, PE
UTILITIES ENGINEER

Education: MS Civil Engineering, University of New Mexico, BS Civil Engineering, Brigham Young
Licences: NM PE No. 13511
Availability: 30%

Patrick has 32 years of experience in water and wastewater engineering and construction management. During his 27-year tenure with the Indian Health Service, Patrick assisted small communities in developing their initial water and wastewater facilities. His designs were tailored to accommodate the limited resources available for operation and maintenance in these communities. Patrick has been involved in replacing aging and undersized facilities for larger communities integrating designs seamlessly into their current operations. He is a professionally licensed engineer in the state of New Mexico and is fluent in Spanish. Patrick enjoys working with the diverse communities of New Mexico and aiding community leaders in finding optimal solutions for their water and wastewater needs.

KEVIN SALCIDO, PE
SITE DEVEOPMENT ENGINEER

Education: BS Civil Engineering Technology, New Mexico State University
Licences: NM PE No. 16185
Availability: 30%

Kevin has nearly 30 years of experience in the civil, geotechnical, and environmental engineering field. The majority of his experience is in roadway design, soils, pavement analysis, design, traffic analysis, grading, and drainage designs. Kevin has worked closely with local, city, county, and state government agencies to coordinate numerous roadway designs, large scale site developments, and utility designs. His previous project work ranges from small subdivision design to large area, multi-million dollar master planned developments.

NICOLE TOLLEY, PE
INVESTIGATIONS AND STUDIES LEAD AND PREPARATION OF REPORTS/FEMA LEAD

Education: BS Civil Engineering, Brigham Young University
Licences: UT PE No. 5569768
Availability: 25%

Nicole is a professional engineer with 20 years of environmental document preparation experience with a heavy emphasis on NEPA policies and procedures. Nicole has filled the role of Project Manager or Environmental Lead on several of Horrocks' recent projects and has demonstrated strength in managing and creating defensible environmental documents that comply

with all necessary requirements. She has a thorough understanding of the environmental process and how to analyze and effectively communicate results. Nicole is an expert at building ownership, motivation, and commitment of the team by monitoring scope, schedule, and budget.

RYAN MCDONOUGH
SUE MANAGER

Education: BS Business, Univeristy of New Mexico

Availability: 20%

Ryan has more than 13 years of experience working in the utility sector as a contractor for local utility owners, Century Link, and Comcast. During this time, Ryan worked predominantly in utility designating, focusing on damage prevention, risk assessment, and liability management. In the last six years with Horrocks, Ryan has performed records research, utility mapping, surveying, and utility coordination for a wide variety of projects including drainage redesign, bridge widening, telecommunications upgrades, and utility relocation. Ryan also has extensive experience in the use of radio detection equipment and ground penetrating radar and has a good understanding of both their strengths and limitations in the field.

JACOBO PACHECO, PS, CFedS
SURVEY LEAD

Education: BS Surveying Engineering, New Mexico State University

Licences: NM PLS No.17822

Availability: 25%

Jacobo has 20 years of experience in the land surveying profession and has provided professional surveying and mapping services throughout the state of New Mexico. He has experience in direct oversight and personal supervision of all survey-related work, client relations, project scoping, project management, resource management, program management, and quality control. Jacobo's expertise ensures all surveys executed under his direction are performed in accordance with applicable laws and regulations, as well as the project specific accuracy requirements. His CFedS certification ensures he has the requisite training and experience needed to properly address survey related issues specific to tribal lands.

LEE UNDERWOOD, PE
AIRPORT FACILITIES DESIGNER

Education: BS Civil Engineering, Iowa State University

Licences: NV PE No. 09441

Availability: 20%

Lee has 38 years of professional experience, encompassing program management and design. Over the past 30 years, he has specialized in aviation, playing pivotal roles in the development of two Greenfield airports - serving as the design lead for one and as the program manager for the other. Lee's expertise extends across various aviation projects, including runways, taxiways, aprons, fuel systems, NAVAID's, water/fire distribution lines, sewage collection systems, roads, parking lots, and drainage systems. His proficiency also encompasses structural, roadway, and utilities design, coupled with a keen understanding of design-build, design-bid-build, and construction management methodologies.

B.PRINCIPAL RESPONSIBLE FOR ADMINISTRATION OF CONTRACT

Habib Abi-Khalil, PE | NM PE 13475
6001 Indian School Road NE #250,
Albuquerque, NM 87110
habiba@horrocks.com | (505)553-1972
Habib will be the main point of contact for all questions during the duration of the contract.

C. LOCATIONS OF OFFICES WHERE WORK WILL BE PERFORMED

This on-call contract will be administrated out of the Las Cruces, New Mexico office (70%) with support from staff in the Albuquerque office (20%), and the Santa Fe office (10%). The New Mexico staff is currently made up of 41 employees. Employees in our three New Mexico offices are available to respond to the City's needs on this important on-call contract. Our firm was established on the foundation of providing extensive design services for federal, state, and local agencies throughout the western states. We understand experience, responsiveness, quality, communication, and providing value are essential to the City and the success of this on-call.

D. PROFESSIONAL RESPONSIBLE AND IN DIRECT CHARGE FOR WORK

ALONZO MARTINEZ, PE, MBA | NM PE 24647
alonzo.martinez@horrocks.com | (575) 888-3221

Alonzo will be the main point of contact for all questions during the duration of the contract.

EVALUATION CRITERIA NO. 3

PERFORMANCE OF THE FIRM

Horrocks has been fortunate to hold various on-call contracts that resulted in successful projects. Our team has a track record of completing assigned task orders on time and on budget while fully meeting the project requirements. We have highlighted several projects relating to potential tasks under this on-call contract. We encourage you to reach out to our references for these projects that showcase our quality of work, compliance with project requirements, adherence to schedules, and cost control of budget commitments.

MESCALERO CARRIZO WATER – Mescalero Apache Tribe, Mescalero, NM

REFERENCE: Hoy Sago, Acting MAT Utilities Manager
(575) 973-5830
hoytsago@mescaleroapachetribe.com

Estimated Construction Total: $9.424M

Horrocks is working with the Mescalero Apache Tribe Public Works Department to complete the design for the Carrizo Water System Improvements Project. Design began in March of 2023, and the project goal is to construct new 8- and 10-inch water lines to replace the old undersized 6-, 4-, and 2-inch pipe, replace existing service lines, and construct pressure-reducing valves (PRVs) with vaults to regulate system pressures. Other issues that the project will address are providing improvements to the Upper Pena Water Storage Tanks, Upper Pena Booster Station, and State Well Pumphouse, replacement of inoperable gate valves and fire hydrants throughout the system, and abandonment of groundwater wells and water storage tanks that are no longer being utilized.

ROCKAWAY BOULEVARD RECONSTRUCTION – City of Rio Rancho, Rio Rancho, NM

REFERENCE: Bill Ladd,
(505)891-5000, bladd@rrnm.gov

Estimated Construction Total: $3.688M

Horrocks designed the reconstruction of Rockaway Boulevard in Rio Rancho and provided construction services for full depth removal of surfacing, subgrade preparation, base course, Hot Mix Asphalt (HMA), side street tie-ins, spillway design and intersection regrading, signing and striping, and permanent signing. A critical part of the project was the design of a new 10-inch water pipeline to replace the aging system. As part of the replacement project, we added fire hydrants to meet city standards on hydrant spacing installation. Horrocks also provided an inspector for roadway items inspection, miscellaneous curb and gutter, sidewalk and ADA curb returns, materials testing monitoring, QA analysis on materials testing, traffic control management, storm water best management practices monitoring, approval of monthly pay quantities and recommendation for payment.

Rockaway Boulevard Construction

MESCALERO APACHE INFRASTRUCTURE IMPROVEMENTS - Mescalero Apache Tribe, Mescalero, NM

REFERENCE: Eric Gutierrez,
(575) 464-4431, (575) 491-5693
eric.gutierrez@mescalero.org

Estimated Construction Total: $2.85M

Horrocks was contracted by the Mescalero Apache Tribe to plan, design and administer construction for various infrastructure improvements throughout the Mescalero Apache School Campus. These improvements included drainage, ADA, sidewalks, parking lots, and lift station.

Phase I Planning was completed in summer of 2021, design in early 2023, and construction began in summer of 2023. Construction is scheduled to be completed this winter 2024. Horrocks is currently providing construction administration and observation services. Phase I of this project is currently within budget and on schedule.

Phase II consists of retaining walls, ADA improvements and regrading for the walking path to the track. Design was completed in winter 2023, and the project is currently shelved waiting on construction funding.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Johnson, Mirmiran, & Thompson, Inc., of 40 Wight Ave, Hunt Valley, MD, 21030, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Johnson, Mirmiran, & Thompson, Inc. 40 Wight Ave Hunt Valley, MD 21030 ATTENTION: Melchor Herrera

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

ATTACHMENT C – COST PROPOSAL FORM RFP 23-24-050 – Civil Engineering Services
(NOTE: This form shall not to be modified in any way)

Consulting Firm _____

ITEM	DIRECT LABOR / CLASSIFICATION	HOURLY RATE*
1	Principal Engineer	$260.00
2	Project Engineer/Project Manager	$210.00
3	Senior Engineer	$190.00
4	Design Engineer	$145.00
5	Engineer Intern	$ 70.00
6	Engineering Technician	$120.00
7	Drafting Technician	$110.00
8	Survey Crew**	$210.00
9	Construction Inspector/Observer	$130.00
10	Administrative/Clerical	$ 70.00
11	Field Testing and Investigations	$135.00
		PERCENT MARKUP
12	Subcontractor Cost Markup	3%
ITEM	**MATERIALS / REIMBURSABLE EXPENSES**	**RATE**
	Travel	
13	Per Diem (per day) – Pre-Approval Required	City of Las Cruces Rate
14	Vehicle Mileage Rate (per mile)	Current IRS Rate
	Reproduction Services	
15	Black and White Copies (per copy)	$ 0.12
16	Color Copies (per copy)	$ 0.65
17	Prints 24x36 (per sheet)	$ 4.00
18	Mylars 24x36 (per sheet)	$ 9.00
19	Photo Quality Plots (per plot)	$22.00
	Miscellaneous	
20	Any other costs incurred	Case by Case Basis

**Rates are to include all overhead costs and any and all assessment expenses*

***Survey Crew Rates are to include GPS and Total Station Equipment*

Notes: 1. Detailed man hour Estimates are required for T&M contracts and are to utilize corresponding rates

2. Rates in place at the time a project is contracted with the City will remain for the duration of the contract.

Las Cruces, NM 88001

RE: RFP 23-24-050 – Civil Engineering Services

Dear Selection Committee,

Johnson, Mirmiran & Thompson, Inc. (JMT) appreciates the opportunity to grow our partnership with the City of Las Cruces (CLC), to provide civil engineering services, including program and construction management and inspection services. Our experience includes providing services to public and private sectors throughout Texas and New Mexico, enabling us to provide a client-focused comprehensive strategy to assess and build critical infrastructure to make a stronger community. Our technical approach herein will demonstrate that the JMT Team possesses valuable knowledge and experience, equipping us with the expertise to address and respond to CLC's engineering needs proficiently.

Gerardo Garcia, PE (NM PE # 29361, Exp. 12/31/2025), CCM, will lead the program and project team as Project Manager (PM) with over 15 years of experience in construction and project management, planning and scheduling, contract compliance and administration, civil design, cost estimating, and quality control and assurance. Gerardo has experience preparing construction procurement packages for multiple agencies and their projects. **Jaime Gallo, PE (NM PE # 22749, Exp. 12/31/2025), CCM,** will act as the Project Principal, bringing 26 years of civil engineering and construction management experience. Jaime has developed numerous civil designs, acquired commercial development permits, and overseen all aspects of construction for large, complex projects for multiple agencies for roadways, streets, infrastructure, utilities, and aviation.

JMT Texas's in-depth understanding of infrastructure, facilities, and construction challenges, with support from JMT's overall national construction management expertise, offers the CLC a dedicated team. JMT has a strong working relationship further supported by proven survey and SUE subconsultant FXSA – a trusted firm keenly aware of CLC's goals and objectives. Our tactical and highly competent team ensures that CLC has capable and skilled professionals who have successfully collaborated on local and statewide projects and can fulfill the project's required disciplines.

We look forward to this opportunity to assist CLC with its civil engineering needs. Please contact our team if you have questions or need more information about our submittal.

Sincerely,

Melchor Herrera, PE, PMP
Sr. Vice President/El Paso Office Leader

Jaime Gallo, PE, CCM
Vice President/Project Principal

FIRM INTRODUCTION

JOHNSON, MIRMIRAN & THOMPSON, INC. (JMT) is a multi-disciplinary engineering, architectural, construction management, and environmental firm serving clients across the US since 1971. With over 2,200 employees, JMT works with all levels of government, including state, county, municipal, and federal, from planning through construction. JMT ranks #59 Mountain States Region Top Design Firm (ENR).

- **With over 50 years of experience as a firm,** JMT brings a strong foundation that ensures we find the simple, cost-effective solution to build critical community infrastructure.
- JMT is ready to bring this experience to the City. We value long-term relationships and seek to continue building that partnership with the City of Las Cruces.
- We constantly strive to deliver on the needs and expectations of our clients, employees, business partners, and communities where we live and work. **This objective requires a well-qualified team, which JMT has assembled for this project.**

OUR MISSION

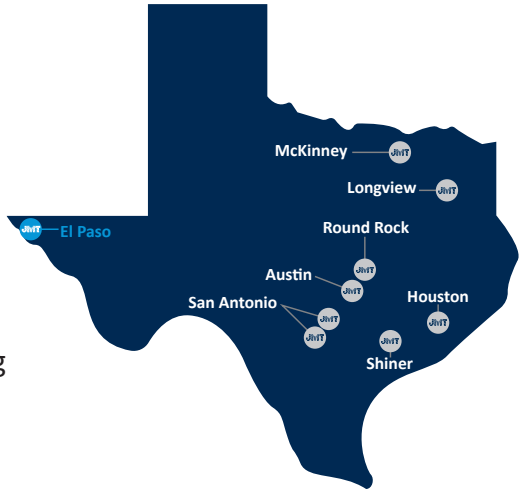
"To provide professional infrastructure services that **turn visions into realities** for the betterment of our clients, communities, environment, and employee-owners."

Our mission statement provides the framework for everything we do. Each of our employees is invested in our success as an employee-owned company. We remain continually committed to providing clients with professional services of exceptional quality.

CONTINUED GROWTH

JMT has evolved significantly over the past five decades and continues to diversify our markets. Today, JMT provides consulting services to a varied client base of public and private entities. This diversification has resulted in considerable geographic expansion throughout the US.

With this growth, JMT acquired ECM International, Inc. of El Paso, TX, registered to perform engineering work in the **State of New Mexico (ID # 03-359805-00-3)** and has a standing relationship with the City of Las Cruces. Our dedicated local team has in-depth knowledge and experience working with the City. It is familiar with the operations and processes, bringing an invaluable benefit, as we have the proven results to continue executing successful projects.



Our local team comprises over 60 professionals, including licensed civil engineers, architects, construction managers, and inspectors. With extensive experience working with the City of Las Cruces on projects such as the 2018 Bond Program and the ongoing RoadRunner Transit and Operations Center, our team is well-equipped to deliver timely solutions at reduced engineering costs. The proximity of our team enables us to expedite services, ensuring a superior understanding of local agency standards, specifications, and permitting procedures.

JMT is headquartered in Hunt Valley, MD, with 50 offices nationwide, including nine locations in Texas – El Paso, Austin, Houston, Longview, McKinney, Round Rock, San Antonio (2), and Shiner. Our El Paso Location provides design, program, project, and construction management and inspection services to Texas and New Mexico clients. The El Paso Team offers customers a broad range of expertise in project design and construction management for projects including infrastructure, utilities, rail, military, mass transportation, highways, fueling facilities, water/wastewater, healthcare, industrial, and educational facilities with experts and licensed engineers in a variety of disciplines including civil, mechanical, and electrical, registered architects, PMI-certified project management professionals, registered accessibility specialist, LEED professionals, certified construction professionals, project administrative assistants, schedulers and cost estimators. Our approach proactively avoids problems through proven and effective communication and management methodologies and

experience in constructing a broad base of infrastructure projects. Backed by this strong team of professionals, we offer a program that ensures quality and cost savings while minimizing risk to our clients.

JMT's approach concentrates on the client's needs through the project planning and implementation phases. Critical elements include:

- ✓ Defining needs and setting realistic budgets and schedules.
- ✓ Establishing communications protocol.
- ✓ Establishing design criteria, coordinating and overseeing design;
- ✓ Managing key stakeholders' expectations.
- ✓ Supporting the bidding process.
- ✓ Managing schedules and costs; and,
- ✓ Overseeing the construction and facility management phases.

Our **Project Management Team** possesses a comprehensive grasp of infrastructure projects, comprehending the entire life cycle of civil infrastructure endeavors, spanning from the initial planning and development stages to design, construction, and project closure. Building upon insights gleaned from past projects, we are adept at identifying and mitigating risks across all project phases, understanding the intricacies of locally and federally funded projects, and ensuring meticulous documentation to ensure successful project delivery. The proposed team, spearheaded by JMT with support from subconsultant FXSA providing surveying and SUE services, boasts a track record of service on numerous locally and federally funded projects in Texas and New Mexico.

TECHNICAL APPROACH

JMT employs best management practices, as recommended by the Project Management Institute (PMI) and the Construction Management Association of America (CMAA). We maintain active memberships and certifications with these and other relevant organization and remain at the forefront of the latest improvements and technological implementations, resulting in quality projects and cost savings for our clients. We have a proven record of providing project management services to clients in the El Paso and West Texas Region and throughout the state of Texas. Successful project management demands a detail-diligent approach, proactively managed by professionals who have the experience, skills, and technical support each project demands.

As **City of Las Cruce's Project Manager,** JMT will:

- Coordinate and oversee all phases of the project from concept through completion.
- Develop cost and budget controls.
- Monitor the project's overall schedule.
- Provide quality control/assurance measures.
- Provide construction management & administration.

JMT brings its strong reputation for providing first rate service and quality engineering, design, and planning services to clients. JMT is certified to ISO 9001:2015, an **internationally recognized standard** for organizational quality management and operational excellence.

JMT's staff experience gives it a unique understanding of what can go wrong on a design/construction project. JMT uses this knowledge to proactively identify potential issues on a project and initiates preventive action through strategic planning and project controls.

TASK 00 - PROJECT MANAGEMENT SERVICES

JMT employs a "project specific" approach to Project Management, centered around the development of a comprehensive **Project Management Plan (PMP).** The creation of this PMP entails collaborating with the management staff of the City of Las Cruces to clearly define project requirements and objectives. This plan delineates strategies, methods, systems, and procedures to effectively measure the project's performance from its inception to its completion. Our PMP articulates the execution, monitoring, control, and closure of the project, providing a structured pathway forward.

Furthermore, the PMP serves as a detailed guide to the project, outlining its scope, deliverables, timelines,

communications, and resource allocation. This level of clarity ensures a shared understanding among all stakeholders regarding the project's objectives and the methods by which they will be accomplished. Beyond establishing processes, the PMP furnishes a framework for decision-making throughout the project lifecycle.

Included in our PMP are metrics and key performance indicators (KPIs) designed to monitor progress and performance against predetermined baseline targets pertaining to both costs and schedule. Any deviations from these KPIs are promptly identified, triggering corrective actions to maintain project progression. Lastly, the PMP defines roles, responsibilities, and communication channels for all members of the project team, facilitating stakeholder engagement and collaboration while ensuring their involvement in key decision-making processes.

TASK 01 – PRE-DESIGN SERVICES

PROJECT CONCEPTION AND SCOPING

Our team of qualified personnel will assist the City of Las Cruces in defining and planning the project needs related to the civil infrastructure. Upon the identification of the project need, a scoping meeting will be held with the corresponding staff to define the goals and the nature of the project. Whether it is a project that needs to address a ponding/flooding issue, traffic queues, or merely a roadway reconstruction, JMT will be able to define the scope of work to address the City's goal.

BASIS OF DESIGN REPORT (BOD)

Once the project scope of work is defined, understood, and agreed on, a Basis of Design Report (BOD) will be developed during this phase. The BOD will define and document the proposed project's design criteria and goals. In addition, other factors, including design exemptions, functional classification, roadway class, traffic requirements and level of service, preliminary geometric schematic, right-of-way acquisition, utility identification,environmental impacts and key processes will be identified (such as permitting or letting). An appropriate design approval flow-chart will be acknowledged with the City of Las Cruces's Project Manager as the main approver. A draft of the BOD will be presented for the City's review. Once approved, the BOD will become the groundwork for the project.

RISK IDENTIFICATION

Under this phase, a **Risk Matrix** will be developed to identify all the potential threats to the project. The matrix will be developed to identify, assess, and manage risks affecting the project's budget, schedule and quality goals. Understanding the project risks will aid the City of Las Cruces in allocating and managing the project risks properly and making informed decisions during each project phase. The Risk Matrix will be a living document under the Project Management Plan (PMP).

Additionally, the plan identifies potential risks and outlines strategies for mitigating or managing them. By anticipating and planning for risks, the project team can minimize their impact on the project's success.

STAKEHOLDER IDENTIFICATION

As part of the risk identification process, stakeholders (property owners, businesses, school districts), utility companies (El Paso Electric, Las Cruces Utility Department, and other authorities having jurisdiction (Elephant Butte Irrigation District, NMDOT, Doña Ana County, amongst others) potentially to be affected by the project will be identified. The project inception and preliminary schedule will be notified to each of the affected stakeholders to provide ample notification of the proposed project improvements. This process will streamline the coordination of the next project phases.

ARCHAEOLOGICAL & ENVIRONMENTAL ASSESSMENT

A preliminary environmental assessment will be conducted to gather all available environmental information relative to the project area from the appropriate local, state and federal agencies. These records will be reviewed to identify the environmental risks along the project corridor, including streams, endangered species, vegetation, hazardous materials, potential pollution/contamination, and any other archaeological issues. Site reconnaissance visits will be conducted to visually inspect the project for additional risks and verify risks identified on the available documentation. The **Risk Matrix** will be updated to reflect these challenges.

DATA COLLECTION

Our initial step during the design services includes the data collection and field reconnaissance of the project's vicinity. This includes the collection of any available "as-built plans," right-of-way maps, soil maps, geotechnical data, existing schematics, previous corridor studies, previous Subsurface Utility Engineering (SUE) mapping, easement data, traffic counts, and accident data. In addition, we will perform research on current unit bd price information so that budgets may be established as baseline order of magnitude costs.

TASK 02 DESIGN SERVICES

FIELD SURVEYING & RIGHT-OF-WAY MAPPING

Our team will develop the corresponding right-of-way boundary and topographic survey to establish horizontal and vertical control for the project. Our licensed surveyor will set and certify control points based on the NAD 83 and NAVD 88 datums. Our surveyor will locate previously set control points and benchmarks established by and for projects in the adjacent proximity.

GEOTECHNICAL INVESTIGATION

Our understanding is that geotechnical investigation services are not encompassed within this RFQ. Nevertheless, we will coordinate with the geotechnical engineer to assess the current terrain conditions and soil suitability for construction purposes. Upon completion of the soil investigation, various design alternatives will be explored to assess and propose the most cost-effective approach, encompassing pavement structures, embankment soils, and other relevant considerations.

DRAINAGE ANALYSIS

Prior to developing the project design, a detailed drainage analysis report will be generated to identify flood zones and the existing and proposed drainage patterns. In addition, the drainage analysis will provide alternatives to mitigate the impact of the proposed runoff within the project. We will analyze an alternative design approach to reduce the footprint of the proposed drainage detention/retention facilities will be analyzed. Once the analysis is completed, JMT's team will develop the project design based on the established criteria from the BOD and identified constraints.

PLANS, SPECIFICATIONS AND ESTIMATE

JMT's team will then develop Plans, Specifications and Estimate (PS&E). Periodic design phase reviews will be held with the designer, the City of Las Cruces, utility companies, funding agencies, and any other authorities with jurisdiction. This will ensure proper coordination and decision making is achieved and documented as the design progresses. At a minimum, design reviews will occur at the 30%, 60%, 95% and 100% of design completion. In addition to preparing the design packages, cost estimates will be developed during each submittal to ensure the project budget is well within the established baseline costs.

SUBSURFACE UTILITY EXPLORATION

Our approach to mitigating utility conflict risks relies on the proper employment of Subsurface Utility Exploration (SUE). SUE Quality Level D is performed during the pre-design phase while performing the data collection of available as-built data from past projects and utility records. SUE Quality Level C will be performed during the process of surveying the project limits. Once the project improvements are mapped and defined, the use of Quality Level B and Level A will be implemented to locate and confirm utility conflicts with proposed infrastructure. Our design approach is to avoid utility relocations as best as feasible. However, for those utility conflicts that cannot be avoided, SUE Level A will provide alternatives to the proposed design or on a potential utility adjustment or relocation.

STAKEHOLDER COORDINATION

Communication and building on relationships will be key to our stakeholder coordination. Businesses and residents in the project's surrounding area will be concerned about access, sequencing, closures, and construction timeframes. Public meetings will be held during various design phases to convey the intent of the project design to all impacted stakeholders. Notification material will be produced in English & Spanish. Once in construction, our team will undertake statutorily mandated tactics to produce and share newsletters (sent via regular mail, hand delivery and email) to property owners & stakeholders.

UTILITY COORDINATION

JMT understands the impact on construction budgets and project delivery time due to improper **utility coordination.** In addition to the design review meetings, JMT's team anticipates having a series of coordination meetings with utility companies within the project limits. The JMT team will approach designing alternatives to avoid utility conflicts and minimize utility relocations needed to accommodate the new project infrastructure. A Utility Matrix will be developed during the design phase, which will be used to track conflicts and adjustments needed to accommodate the project improvements.

ENVIRONMENTAL DOCUMENTATION & CLEARANCE

Once the schematic layout of the proposed project is mapped and identified, the environmental clearance documentation will be developed, conforming to the **National Environmental Policy Act & Environmental Permits Issues & Commitments (EPIC).** This process will be streamlined by ensuring accurate documentation is prepared and submitted to the corresponding agencies.

CONSTRUCTABILITY REVIEWS

To control the cost, schedule, and scope of work, the JMT team will perform **Constructability Reviews** during the 60%, 90% and 100% design stages. A thorough review of the design documents, including drawings, specifications, estimate, bid form and contracting requirements will be done. Constructability reviews will be focused on the following:

- Identifying document contradictions, errors and omissions.
- Reviewing phasing and sequence logic, permitting, code compliance and project constructability.
- Evaluating market conditions on material shortages and availability.
- Analyzing the current market for price comparison.
- Developing an independent quantity takeoff and opinion of probable construction cost.

TASK 03 - PROCUREMENT PHASE

JMT's team will assist the City during the bidding and contracting process of the project. Any changes or clarifications resulting in addenda will be promptly developed and distributed to potential bidders. Once all the bids are received, a bid analysis will be developed. A tabulation of all bids, alternatives, and unit prices will be compared to the engineer's estimate and an Independent Opinion of Construction Cost. In addition, JMT will be able to address issues with **unbalanced bids.** Unbalanced bids typically impact the construction budget and the Owner's financing capabilities if these are not addressed properly. Additionally, accepting unbalanced bids will trigger inflated prices for items of work that may exponentially increase the project budget, impacting its quality and schedule.

Our expert team, with extensive background in construction, design and project management, will be able to conduct a detailed analysis of bids to identify and potentially disqualify unbalanced bids. Our approach consists of evaluating detailed breakdowns of unit prices, implementing strict bid evaluation criteria, or setting quantity limits for billing purposes. Our team will be able to provide recommendations to the City for responsive bidders and assist with any needed negotiations.

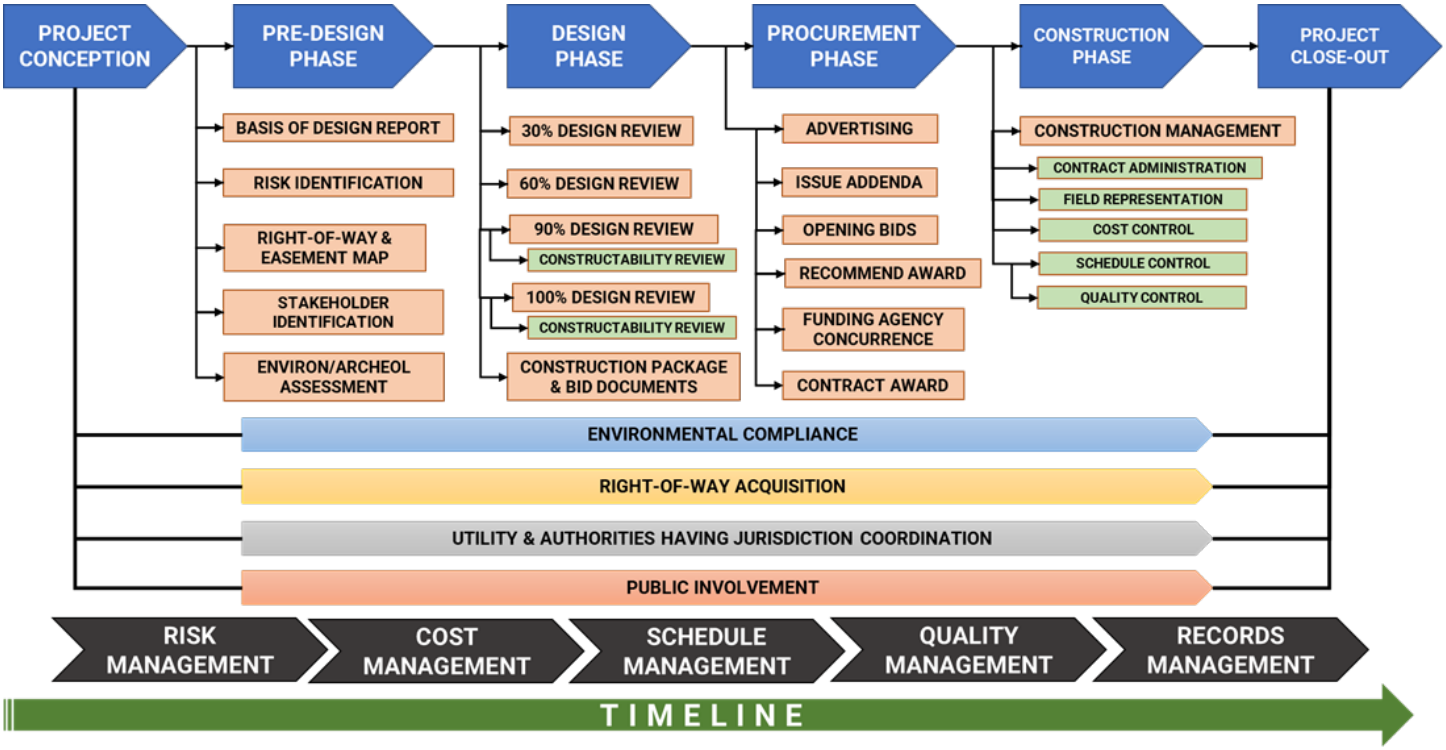
TASK 04 - CONSTRUCTION MANAGEMENT AND ADMINISTRATION

The JMT team will coordinate all phases of the construction process from pre-construction to post-construction, including cost and budget controls, scheduling, estimating, quality control/assurance, field representation and contract administration. JMT's staff experience brings a unique understanding of what can go wrong on a construction project. JMT uses this knowledge to proactively identify any potential field issue and will initiate preventative action through strategic planning and project controls.

During this task, JMT will provide full or part-time field representatives to provide field quality acceptance on work in place. In summary, our team will:

- Review product submittals (shop drawings and product data) for compliance with contract documents.
- Provide construction oversight, field engineering, and inspection.
- Monitor and document installed work in place.
- Measure, quantify, track work quantities, and coordinate payment quantities with the Contractor and Owner.
- Coordinate ongoing construction work with the Contractor, Owner, and other authorities having jurisdiction.
- Perform routine traffic barricades and signage and BMP inspections, report findings, and inform the Contractor of deficiencies.
- Coordinate and resolve field issues with the Contractor and inform the Owner of potential problems.
- Track and respond to Request for Information.
- Prepare record drawings based on as-built data.

FIGURE 1: TYPICAL PROJECT TIMELINE



COST MANAGEMENT APPROACH

JMT understands that budget and cost control are fundamental to effectively managing any project. Our familiarity with the local market will aid in controlling the costs throughout the project's planning, design, and construction phases. JMT is well-versed in establishing detailed project budgets, which include all the project costs and will integrate cost and schedule estimating tools into the project control system to ensure all tasks remain within budget. Throughout the planning process, the JMT Project Manager (PM) will participate and provide design and construction expertise to the planning team. The PM will focus on the following areas:

- Identifying preliminary project budgets and costs.
- Developing the project master schedule.
- Proactively identifying challenges to mitigate budgetary impacts including ROW acquisition, utility relocation, and environmental clearances.
- Assisting the City in receiving the greatest return on their investment.

Prior to bidding, an analysis of the current market will be performed, including an independent quantity takeoff, to ensure the engineer's estimate is within the expected bid prices. Our approach consists of monitoring costs

and expenses, detecting cost variances, and ensuring the City's staff is informed early in the process to better control and contain cost growth. JMT will look for saving opportunities throughout the life of the project. JMT's expertise in controlling costs and budget will aid in minimizing potential change orders once the project goes into construction.

VALUE ENGINEERING APPROACH

JMT professionals provide value engineering services through constructability reviews, construction negotiations, design reviews, discussion of change order proposals and field change directives. Value engineering workshops are conducted to develop and evaluate different alternatives. Durability, maintenance requirements, and availability of local materials and expertise are a few items researched when determining the best value for our clients. Our value engineering may not necessarily result in the lowest construction cost but will definitely result in the best end product at the lowest **total lifecycle cost.**

SCHEDULE MANAGEMENT APPROACH

JMT's team understands that a realistic project schedule begins with well-defined and established project goals. During the planning phase, JMT will meet with the City's staff to discuss the objectives of the project and the City's goals. JMT will then generate a **Master Project Schedule** detailing project activities and milestones throughout the planning, design, and construction phases. JMT's project management will monitor the project's progress during all its phases. Deviations from the master plan will be monitored, identified and promptly addressed. JMT will maintain regular communication with the City to avoid surprises.

" The JMT's approach consists of careful planning and expert execution"

JMT utilizes critical path method (CPM) analysis when developing and maintaining project schedules. CPM scheduling is the gold standard of schedule management, yet it is not often used during project planning and design phases. Many design consultants often only provide high-level Gantt charts for their design schedules that don't tell you much about when a project is expected to finish if and when individual activities begin to slip. With CPM schedules, JMT always knows the projected finish dates, and we can analyze what needs to be done to regain lost time.

During construction, JMT will review the contractor's baseline schedule and determine if it presents a realistic, thorough and workable plan in accordance with the contract requirements to achieve successful completion within the allotted time. The Master Project Schedule will be updated to incorporate the accepted construction baseline schedule. JMT will conduct monthly schedule update reviews and compare actual construction progress to the approved baseline schedule. If schedule slippages are found, JMT will work with the contractor to develop mitigation strategies such as adding additional manpower, or when feasible, combining construction phases to complete the project on time. JMT will accurately record the reasons for the slippages to protect the City from the contractors attempting, later in the project, to attribute their inefficiencies to unforeseen circumstances or actions taken by the City.

In addition, JMT utilizes the Earned Value Analysis (EVA) methodology, as recommended by PMI and CMAA, to illustrate to Owners, who may not have the time to go through a complex schedule, how the project is performing. The visualization of the EVA provides a high-level overview of the project status so that owners or any other stakeholder can visually see actual project schedule performance compared to their planned performance. You don't have to be a scheduling expert, knowledgeable in design or construction, or deeply involved in the project to quickly see and understand how the project is progressing at any point during the project.

QUALITY MANAGEMENT APPROACH

JMT will rely on discipline-specific engineers and senior technical reviewers with the skill sets and experience in our selected categories to ensure our work receives an appropriate level of review by a seasoned professional. Our internal QA/QC review process is often performed in Bluebeam Studio to ensure all issues are resolved and quality control checks are completed.

Our QA/QC program consists of several components. For example, during the early stages of the project, we will review initial plans and studies to identify and resolve potential constructability issues. By doing so, we can

proceed confidently with our design and avoid potential issues during construction, which can become more complicated and expensive to resolve. Often, we have found that these reviews may improve the overall design, provide cost savings, and positively affect the overall schedule.

Our QA/QC program also focuses on independent reviews of every deliverable at every project milestone. We use JMT's custom 5-Step Bluebeam Process, which follows:

During our QA/QC program, we will also perform the following procedures:

- Our PM will identify hard internal draft submittal deadlines within our project schedule to ensure sufficient time for our QC reviews and the necessary time to address comments and backcheck before our submittal. Deliverables to the City will be posted to our ProjectWise system along with our internal QA/QC PDFs.
- We will schedule a comment resolution meeting with City reviewers to discuss all comments requiring clarification. After the meeting, actions for all comments will be identified, and we will ensure each comment has been addressed to complete the verification process.

RISK MANAGEMENT PLAN (RMP)

JMT's risk management approach consists of identifying, tracking, mitigating and resolving risks. JMT will examine each project, perform a risk analysis and develop a Risk Management Plan (RMP) for every major scenario that could significantly affect the project's time and budget. Early identification of risks and the prompt development of a mitigation plan will reduce the odds that a project is significantly affected or delayed. JMT's approach to Risk Management relies on the following approach:

- Realistic project assumptions: Do not allow idealistic interpretations of the project assumptions or promote the idea that all will go according to plan.
- Gather expert judgments: Collect a variety of expert judgments which support unbiased assessments and analysis.
- Clearly understand risk elements and their impacts: In the early phases of project planning and development, clearly understand each risk element and its potential impacts.
- Develop mitigation strategies.

The initial step of risk management involves identifying and documenting risks and opportunities; however, this is merely the starting point. Following identification, analyzing a project's risks and opportunities offers the project team and stakeholders a systematic evaluation of their potential impact on the project. This enables the team to prioritize risks deemed to have the highest potential impact on the project and are also likely to occur.

RECORDS MANAGEMENT APPROACH

The JMT team proposes implementing the Procore Management Web-Based Software for the project's document control. This software is a user-friendly and cloud-based management software that is widely recognized all over the country. JMT's Procore Certified management and administrative staff offer continual support and instruction to its clients and the entire project team. Information and stored documentation include drawings and specifications (through all phases), construction submittals, requests for information, transmittals, schedules, daily reports, photographs, meeting minutes, non-conformances, and any other relevant design and construction correspondence.

JMT has successfully delivered a **"green approach"** in record keeping and document control on its recent projects.

The JMT team will establish a uniform and descriptive file naming convention on all electronic documentation. This will allow the construction team to filter and retrieve documentation more easily without spending valuable time opening and searching for the correct document. The naming convention also helps avoid misplaced or lost documents and maintains an accurate document inventory.

COMMUNICATION MANAGEMENT PLAN (CMP)

JMT knows the key to a successful project is establishing an effective CMP. A clear and thorough project-specific CMP will set the project on the right path and minimize or eliminate potential issues within all the project players. JMT will develop a CMP process that meets the needs of each project and is inclusive of the following: Communication flow, partnering, expectations, public involvement, transfer of knowledge, escalation ladder, and emergency response plan.

JMT understands the importance of a face-to-face or telephone conversation. Often, we end up with a multi-page email thread on a topic that could have been easily resolved with a fifteen-minute conference call. Practicing this "15-minute conference call" strategy, JMT has been able to diffuse conflict and save valuable time for the project. Meetings do not have to last an hour or half an hour. Most issues on a design and construction project can be resolved with a quick discussion to the point and immediately memorialized in an email or memorandum to save valuable time and effort amongst all parties.

TEAM APPROACH, STRATEGIES AND PRACTICES

Over its nearly four-decade history, the JMT team has developed, passed down, and employed common, well-known techniques for coordinating project teams and consultants.

PROFESSIONALISM

JMT team members are professionals adhering to common guides of professionalism and stringent licensing board codes of conduct. Our team members are respected for their technical competence and mutual respect towards all others. This mutual respect establishes the foundation for the successful coordination of project teams. An essential element of this mutual respect is always keeping the project or program's success as the shared goal. JMT has the soft skills to manage a meeting and target the problem, not the messenger or the individual.

GRANTED AUTHORITY

As your **Project Manager,** we see it as our responsibility to understand all aspects of a complex problem and break it down to its core elements. We take action within the authority granted by our client. When the problem is beyond our granted authority, we present the suggested course of action concisely, along with possible outcomes for you, our client, to analyze and provide a solution easily. This efficiency results in fewer delays and benefits to the entire project team.

LESSONS LEARNED AND IMPROVEMENT

JMT provides a **Lessons Learned Approach** that helps address issues by revisiting completed projects. This has allowed JMT to add value and introduce new project management methodologies to the Owners. JMT strives to continue growing and improving by implementing current industry standards and learning from previous projects.

PROPOSED TEAM'S QUALIFICATIONS

JMT's tenured staff has the demonstrated experience, documented certifications, positive attitude, diligent work ethic, and resourcefulness to overcome challenges the City of Las Cruces project may encounter. We have built lasting relationships with other local cities, counties, TxDOT, utility companies, and other professionals based on these professional values. JMT proposes the following experienced individuals as the core of the project management team.

ORGANIZATIONAL CHART AND KEY PERSONNEL

CITY OF LAS CRUCES

PROJECT PRINCIPAL	PROJECT MANAGER
JAIME GALLO, PE, CCM (JMT)	GERARDO GARCIA, PE, CCM (JMT)

DRAINAGE TASK LEAD ATZUKO REVELES, PE (JMT) Support Staff: Marco Trujillo, EIT (JMT)	**W/WW & UTILITIES TASK LEAD** ATZUKO REVELES, PE (JMT) Support Staff: Arturo Chavez Del Bosque (JMT)
COST ESTIMATES/SCHEDULING TASK LEAD SAUL MEJIA, EIT (JMT) Support Staff: Antonio Loya, EIT (JMT)	**SURVEY & SUE TASK LEAD** JOHN BARNES, CST II (FXSA) Support Staff: Isaac Camacho, RPLS (FXSA)
LAND DEVELOPMENT TASK LEAD GERARDO GARCIA, PE, CCM (JMT) Support Staff: Edgar Garibay (JMT)	**TRANSPORTATION / AVIATION TASK LEAD** GERARDO GARCIA, PE, CCM, (JMT) Support Staff: Omar Moreno, PE (JMT), Daniela Tinajero (JMT)
	CONSTRUCTION MANAGEMENT / INSPECTION FRANCISCO OLIVARES, PE (JMT) ALEX GARCIA, CCM (JMT) Support Staff: Carlos Barrera (JMT)

PRINCIPAL-IN-CHARGE

JAIME GALLO, PE, CCM (JMT) NM PE # 22749, EXP. 12/31/2025

Mr. Gallo has over 26 years of experience in construction, design, project management, contract negotiations, planning, scheduling, estimating, and team leadership on state and federally funded projects from his time as a Contractor, design consultant, and owner's representative. PIC/Jaime has worked on a variety of infrastructure projects including the Loop 375 Border Highway, Spur 601 Liberty Expressway Project, IH-10 Frontage Roads project, and the IH-10 Aesthetics project. Jaime also brings to the team a contractor's

PRINCIPAL-IN-CHARGE
Jaime Gallo | (915) 283-6777 |
404 Executive Center Boulevard, El Paso, TX 79902

perspective from a career of progressive responsibility building some of the region's most significant infrastructure projects, such as the United States Army Corps of Engineers (USACE) Base Realignment and Consolidation Program as well as the TxDOT Spur 601 Design-Build Project. His experience managing large, complex projects involving many stakeholders and entities will be instrumental in the coordination challenges expected on the Rojas Drive Extension project.

PROJECT MANAGER - LAND DEVELOPMENT & AVIATION TASK LEAD

GERARDO GARCIA, PE, CCM (JMT) - NM PE # 29361, EXP. 12/31/2025

Mr. Garcia has over 15 years of experience in construction, design, project management, planning and scheduling, contract compliance and administration, civil design, cost estimating, quality control, and assurance. He has worked on various roadway and drainage improvement projects for the region and has actively led the planning, design, delivery, and construction of these. Gerardo's projects include the Horizon Industrial Park Improvements, Robinson Avenue Reconstruction, Dyer and Montana Rapid Transit System, EPIA's Consolidated Rental Car Agency, and the Runway 8R-26L Rehabilitation. Mr. Garcia's balance of civil design and construction oversight experience will contribute to the delivery of the proposed infrastructure project. His attention to detail, practical approach, and sound engineering judgment are a perfect balance to overcome any challenge the project may encounter.

CONSTRUCTION MANAGER

FRANCISCO OLIVARES, PE, CCM (JMT)

Mr. Olivares has over eight years of project management experience in the public sector, working on state and local government projects, from complex TxDOT highways and bridges to airport runway rehabilitations and city street reconstructions. Francisco has worked on various projects for TxDOT, the City of El Paso, El Paso International Airport, and Camino Real Regional Mobility Authority. He has worked on multiple construction projects for the public sector as a field representative and project manager, giving him first-hand experience in construction processes and challenges. Francisco has vast knowledge and experience with design standards such as the Americans with Disabilities Act (ADA), Texas Accessibility Standards (TAS), Texas Commission of Environmental Quality (TCEQ), TxDOT Standard Specifications for Construction and Maintenance of Highway, Steet, and Bridges, City of El Paso Design Standards for Construction and the El Paso Water Design Standards and Specifications.

ASSISTANT CONSTRUCTION MANAGER

ALEX GARCIA, CCM (JMT)

Mr. Garcia has 18 years of experience in project management and has served as an in-house architect participating in the development of several construction projects by preparing conceptual bid drawings using Autodesk and rendering software. He has a strong background as an on-site project engineer and is currently a construction manager for the City of Las Cruces GO Bond Program and the WestStar Bank Tenant Improvements. Alex's responsibilities include programming, schematic design, preparation of performance documents with AutoCAD system, drafting, specifications, project development, and construction administration.

DRAINAGE, W/WW AND UTILITIES TASK LEAD

ATZUKO REVELES, PE (JMT) - NM PE # 22651, EXP. 12/31/2025

Mr. Reveles has over 17 years of experience in the areas of stormwater and water/wastewater projects, including drainage master plans, flood studies, hydraulic modeling, pipeline and pump design, odor control studies and air sampling, pipeline renewal analysis, capital improvement programs, wastewater vulnerability assessments, and alternative delivery models for water and wastewater systems. Atzuko's construction management experience includes constructability reviews, preparation of cost estimates, CMAR, and design expertise on alternative delivery projects.

COST ESTIMATES AND SCHEDULING TASK LEAD

SAUL MEJIA, EIT (JMT)

Mr. Meija has 15 years of experience in civil infrastructure and vertical projects. His expertise includes construction management, quality control, cost estimating, value engineering, and constructability reviews. Saul has worked on various projects relating to water, sewer, drainage, utilities, roadway, illumination facilities, and recreational facilities. He has worked on several projects for El Paso Water, the International Boundary Water Commission, water/wastewater projects for the U.S. Army Corps of Engineers (NM), and the Wastewater Treatment Plant Rehabilitation project. Saul, having previously worked as a project manager in a construction company, will develop cost estimates, prepare project schedules, and provide detailed analysis of materials, labor, and other factors affecting project costs. He will collaborate with the City, the designers, and contractors to produce detailed cost estimates with recommendations on ways to cut or maintain the costs required for the project.

SURVEY, GEOSPATIAL AND SUE TASK LEAD

JOHN BARNES, CST II (FXSA)

John has over 7 years of experience in surveying, subsurface utility engineering (SUE), and geospatial services. He is a Certified Survey Technician, NSPS Level II Field and Level II Office. John's experience includes working with utility standard designs, and he is adept at working with utility companies to coordinate design conflict resolution plans. John oversees the phase/task management of the SUE portion and directs crews in SUE projects while coordinating with Surveying and CADD staff to ensure proper field data collection. He ensures compliance with ASCE CI-38-02 and meets the client's expectations. He utilizes non-invasive geophysical equipment to provide high-quality results for inaccessible sites. He is skilled in AutoCAD Civil 3D, Carlson Recap Pro, Trimble Business Center, Hilti, TopCon, Trimble and Leica GPS receivers, total stations, and 3D laser scanners and has performed other duties, including cost estimating, project management and data processing.

PROPOSED SUPPORTING STAFF

In addition to the core staff mentioned above, the JMT team has the depth to locally mobilize resources to meet and target the predicted and unforeseen demands of the project. The JMT team bench includes proven industry professionals fully accredited and well-experienced in infrastructure projects. The supporting staff will assist with the following functions: soil investigation, surveying, public involvement, environmental services, utility coordination, and construction administration.

TABLE 1: AVAILABILITY AND CAPACITY TO PERFORM

STAFF	OFFICE LOCATION	PRE-DESIGN	DESIGN	PROCUREMENT	CONSTRUCTION

SIMILAR PROJECTS

CITY OF LAS CRUCES – 2018 GENERAL OBLIGATION BOND PM SERVICES

The $35.5 million bond program included a new fire station, animal shelter facility, and park rehabilitation. The City of Las Cruces awarded a contract for managing the 2018 GO Bond Program to JMT (formerly ECM). One of the GO Bond projects was the design and construction of upgrades to Unidad Park in Las Cruces, New Mexico. The community built Unidad Park with funds provided by individual citizens and local businesses over 20 years ago. The young citizens who participated in the original construction effort are now parents of the children enjoying this park today. We assisted city staff and worked closely with the design team and Parks and Recreation personnel to coordinate public input meetings, design charrettes, and data analysis to meet the specific needs of this park's rehabilitation efforts.

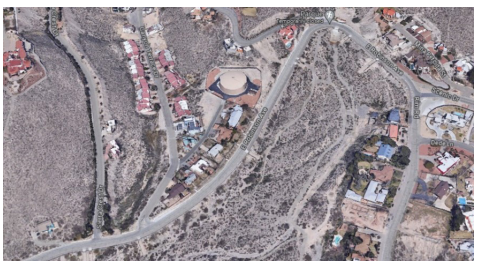
TOWN OF HORIZON - HORIZON INDUSTRIAL PARK STREET AND DRAINAGE IMPROVEMENTS

The JMT's team was involved in the design and construction of the $8M design-bid-build Horizon Industrial Park project for the Town of Horizon City, Texas. The project consisted of full-depth pavement reconstruction for approximately 11,000 linear feet of roadway, ADA improvements, drainage and utility improvements, underground storm sewer system, and water and sanitary sewer system adjustments to allow for the new construction. PM/Garcia was the Design Task Lead, under a different employer, for all the design elements, including roadway design (horizontal and vertical alignment design), underground storm sewer system and drainage structure design, ponding area, grading layout, concrete sidewalks, concrete driveways, parkway design, intersection layout design and ADA curbside ramps. We prepared the plans, specifications & estimate (PS&E) package and bid documents for letting. PM/Garcia also served as the Construction Manager during the construction phase and oversaw all the construction aspects, utility relocations, cost control, schedule control, quality assurance, and acceptance.

EL PASO WATER – GRAND TETON PONDING AREA IMPROVEMENTS

Under a different employer, PM/Garcia was the Design Task Lead for all the design elements on this $2.5M construction project for El Paso Water. The project consisted of constructing a 14.5-acre-feet ponding area to serve as a detention basin for the flow paths coming down from the Franklin Mountains. Drainage modeling was performed using HEC-HMS and HEC-RAS software. The project improvements consisted of the excavation and disposal of unclassified materials, slope stabilization using geotextiles and reinforced concrete riprap, the installation of an 8'x8' concrete culvert daylighting into an impact basin to mitigate erosion velocities, and other site work amenities, including sidewalks, rock walls, driveways, and fencing. The project required high coordination with El Paso Electric Company to accommodate access easements with the project footprint. We prepared the plans, specifications & estimate (PS&E) package and bid documents for letting. PM/Garcia served as the Construction Administrator during the construction phase.

CITY OF EL PASO - ROBINSON AVENUE STREET AND DRAINAGE IMPROVEMENTS



Under a different employer, PM/Garcia was the Design Task Lead for all the design elements on this $3M roadway project that rehabilitated an existing concrete corridor near Scenic Drive in El Paso, TX. The project consisted of the design and construction of a new 4,000' roadway corridor, including the horizontal and vertical geometric design; hydraulic and hydrologic analysis; outfall gabion and concrete flume design, intersection, and site work design; signing and striping layouts; roadway illumination; landscape and

irrigation; utility coordination with affected companies; traffic control plans, coordination, and outreach to the public. PM/Garcia was responsible for all project phases, including design, utility coordination, parathion of plans, specifications & estimate (PS&E), and bid documents, and served as the Construction Administrator.

Refer to Table 2 for other Past Projects successfully delivered with a Civil Engineering Scope of Work.

PERFORMANCE OF THE FIRM

JMT has earned recognition for maintaining high standards of technical excellence in the performance of services for our clients and the delivery of quality plans and contract documents on time and within budget. Based on annual ratings received from clients, JMT has consistently received high marks for timeliness and quality of submittals. JMT maintains a rigorous Quality Assurance Program and proactive involvement with client staff during projects by addressing community concerns and satisfying all client requirements. The table below lists the firms and client references that can attest to our successful performance on projects.

RFP COMPLIANCE DECLARATION

RFP TITLE: **Civil Engineering Services**

RFP NO.: **23-24-050**

DUE DATE/TIME: **February 27, 2024 / 4:00 p.m.**

In compliance with the requirements of this RFP, I, the undersigned, offer and agree to furnish any or all materials and/or services to the City of Las Cruces within the time agreed.

I further certify that this company has not been debarred, suspended, or otherwise made ineligible for participation in Federal Assistance programs under Executive Order 12549 Debarment and Suspension as described in the Federal Rules and Regulations.

Receipt of Addenda Nos.: 2 is hereby acknowledged (where none received, place a zero in this space)

PROJECT ASSIGNMENT AGREEMENT

23-24-050 CIVIL ENGINEERING SERVICES

PROJECT NAME

Pursuant to terms and conditions of City of Las Cruces (CITY) Contract No. 23-24-050 dated June 1, 2024 between the CITY and Johnson, Mirmiran, & Thompson, Inc. (ENGINEER), as amended and incorporated herein by reference, the City and Contractor hereby agree on this _____ day of _____, 20___, as follows:

1. In a satisfactory and proper manner, the ENGINEER shall perform SERVICES as proposed in response to the CITY's RFP No. 23-24-050 and ENGINEER's proposal as set forth in ATTACHMENT A attached hereto.

2. The estimated completion date is number days after a Notice to Proceed is issued by the CITY to the ENGINEER.

3. In consideration for the satisfactory completion of the work agreed to herein, compensation shall be made in the amount of $dollars.cents, plus NMGRT. Invoices issued by the ENGINEER shall be made monthly / upon completion of project with payment by the CITY being made within 30 days upon receipt of undisputed invoice.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called "CITY" and Kimley-Horn and Associates, Inc., of 1001 West Southern Ave, Ste 131, Mesa, AZ, 85210, hereinafter called "CONTRACTOR".

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment "A") during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY'S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY'S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Kimley-Horn and Associates, Inc. 1001 West Southern Ave, Ste 131 Mesa, AZ 85210 ATTENTION: John Kissinger

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

ATTACHMENT C – COST PROPOSAL FORM RFP 23-24-050 – Civil Engineering Services
(NOTE: This form shall not to be modified in any way)

Consulting Firm Kimley-Horn and Associates, Inc.

ITEM	DIRECT LABOR / CLASSIFICATION	HOURLY RATE*
1	Principal Engineer	$ 330.00
2	Project Engineer/Project Manager	$ 295.00
3	Senior Engineer	$ 240.00

Mesa, AZ 85210

Re: Proposal for Civil Engineering Services, RFP No. 23-24-050

Dear Members of the Selection Committee,

The City of Las Cruces (City) is seeking a consultant to perform civil engineering services that will support a variety of public needs ranging from roadway plans and right-of-way (ROW) coordination to transportation studies and airport services. Kimley-Horn is pleased to offer our multidisciplinary engineering and design services, which will enable the design of an array of multifaceted projects throughout the city. We have the relevant experience, quality team, and availability to provide the civil engineering tasks associated with this on-call contract. **We are pleased to offer the City the following benefits in partnering with Kimley-Horn:**

Local Knowledge. Kimley-Horn has partnered with the City on several projects recently, providing the City with guidance on signal timing, lighting analysis, and traffic impact analysis projects. We will use our experience in working with City staff to focus on key issues facing the City, and we will utilize our existing relationships with City staff to streamline communication and management. **There will be no learning curve at the onset of the contract, and our project team is prepared to hit the ground running.** Additionally, we are familiar with how the City prefers to communicate with its consultants and are well-equipped to implement time-tested communication methods and project management approaches that meet the City's desire for in-depth and articulate consulting guidance.

Multidiscipline Planning and Design Services. We have assembled a broad team that offers the City local, technical experts in all of the major design tasks listed in the Request for Proposal (RFP). Out team includes experts in transportation facilities, storm drain, utilities, site development, subsurface utility exploration (SUE), land surveying, drainage reports, Federal Emergency Management Agency (FEMA) flood studies, design of airport facilities, as well as expert witness personnel, project management, construction administration, and public involvement. **Contract Manager Joel Varner and other key team members offer a proven track record of successfully coordinating stakeholder efforts involving municipalities throughout New Mexico, Arizona, and other surrounding states. With access to our vast network of national talented experts and design partners, we are able to quickly address any need the City has.** With Kimley-Horn, the City of Las Cruces truly has access to a one-stop shop for all Civil Engineering tasks that may be encountered as a part of this on-call contract.

Planning and Design Expertise. Our team has experience in all phases of project development, from planning and conceptual studies to traffic and safety analysis to preliminary design and feasibility reports all the way through final construction documents and construction administration. **We are able to assist the City through the entire life cycle of a project, providing the City with a holistic approach to planning and design that provides consistency throughout the project process.** Regardless of what stage of a project's life cycle the City needs assistance with, the Kimley-Horn team is equipped to address all aspects of operations to best meet the needs of the City.

Kimley-Horn is in receipt of addendum one dated February 20, 2024 and addendum two dated February 27, 2024. We appreciate the opportunity to submit our proposal and look forward to continuing our partnership with the City. We are confident in our qualifications and our ability to successfully deliver on assignments from this on-call. If you have any questions, please contact Joel at 602.906.1188 or at joel.varner@kimley-horn.com.

Sincerely,
KIMLEY-HORN

Evaluation Criteria No. 1: Technical Approach

A. Technical Approach

Civil engineering has been a cornerstone of Kimley-Horn's practice since our founding in 1967. We have knowledgeable professionals to address every aspect of the needs of the City of Las Cruces (City) associated with civil engineering, and other related fields that rely on these civil-related topics such as roadway and transportation. Kimley-Horn's professionals have successfully completed a wide range of projects for state, regional, and local agencies. **Our engineers will provide the City with various professional, technical, and customary services as they relate to the on-call tasks assigned by the City, including safety considerations and evaluations, roadway and congestion management, drainage, utilities, and more.** We do not just work to find solutions to the task we are selected to complete, but provide additional value to the project by thinking ahead to anticipate how given solutions will affect other aspects of the project. We work to get these items incorporated into the task schedule as needed, and we make it a priority to keep up-to-date on innovative and emerging technologies and methods and think outside the box to find creative solutions to tasks.

Assigning the Right Project Team

A big part of our approach to this civil engineering services on-call is assigning the right team for each project. The key is making sure that when you contact us that we provide the team that can serve you best. For example, if the project is highly specialized such as a structural forensics opportunity where there is structural building damage caused by stormwater flooding, the City needs a forensics specialist rather than a structural engineer whose career has been focused on primarily bridge and retaining wall design. Likewise, the City needs a team that has the capacity to effectively lead a given project and provide the City with exceptional service.Our proposed contract manager, Joel Varner, has managed similar civil engineering on-calls across the Valley over his 14-plus-year career, and knows the importance of matching the right team for each project. He has a strong understanding of the individual strengths of our proposed team members as well as other support staff at Kimley-Horn. Joel is also familiar with individual and team workload situations to ensure that the team assigned has the available capacity to serve the City effectively. When approached by the City with an on-call task, Joel will connect the right point of contact that is proficient, available, and cost effective based on the nature of the task.

B. Major Tasks to be Accomplished

Our team has served as on-call consultants for many municipalities over the years and we have developed an approach to making every task a successful one.

Our major tasks and goals for this contract include the following:

Being Flexible. We know that having a flexible approach is a critical need during on-call contracts. Our project team understands how to navigate changes to the project schedule, scope, budget, and other various unforeseen circumstances. Our team is knowledgeable and available to offer our consulting services if and when these changes arise.

Thinking and Acting as an Extension of the City's Staff. Our team will approach the City's projects as though we are part of your staff. We want to operate as one efficient unit, prioritizing your overall vision and goals. We anticipate acting in concert with the Las Cruces community and working to minimize constraints to the City's objectives.

Thinking Big Picture. We will look beyond the project, asking ourselves: *What is the ultimate goal?* We will help the City identify and procure outside funding whenever possible.

Being Creative. We will look for creative and innovative solutions and present them to the City throughout the projects that come out as part of this on-call contract. *One example of this includes when Kimley-Horn was tasked by the City to complete a signal timing and phasing evaluation at the closely-spaced intersections of Spitz Street/Three Crosses Avenue and Main Street/ Solano Drive. Our team found that without clustering the intersections together, the City could instead utilize fixed timing to accomplish the same result and be more flexible. This allowed the City to customize the signal splits while maintaining coordination between the two intersections. Kimley-Horn also provided additional recommendations at these locations to improve operations, including double-servicing a left turn and changing the phase order.*

Providing Community and Council Support. Outreach to the community can be as important as the design of a project. We can prepare all exhibits and media, present information to the community or council, or simply provide support for the City. Our public involvement team is versed in community outreach and will work with the

City to reach consensus among all stakeholders involved.

Communicate Continuously and Effectively. We continuously keep the City's Project Manager and major stakeholder abreast of all project-related activities. The City needs a consultant who is responsive and proactively communicates the status of tasks to keep the City informed. We also understand the importance of communicating with the City when potential changes arise that may impact the project budget or schedule, that way a mutually agreed-upon solution can be reached in a timely fashion.

Produce Quality Deliverables. Our team is committed first and foremost to delivering high-quality deliverables void of errors and omissions. Between pre-submittal quality control reviews through tracking major action items and providing detailed responses to the City's comments, we strive to create a quality experience for our clients.

C. Statement of Services

With this civil engineering services on-call contract, it is essential that the City identifies a consultant who can provide a broad range of planning, design, and construction engineering services, a team of strong, experienced staff who are leaders in their design disciplines who can be trusted to deliver on very specific types of services, such as a airport design support, transportation planning, or modifying a FLO-2D model, a consultant with the resources and capabilities to deliver on high-profile and fast-paced projects for the City. Kimley-Horn's national network of experts and strong local presence make it an ideal selection for this civil engineering on-call contract. **Our team is pleased to offer the City the following services and expertise in the following disciplines, all of which are provided by our in-house team of engineers and planners.**

Transportation Facilities

The design of transportation facilities is fundamental to what we do at Kimley-Horn. Since our inception, we have built a national reputation for delivering exceptional solutions to clients across various sectors, including public agencies, private developers, and transportation authorities. Our team of talented professionals brings a wealth of experience and expertise in transportation engineering, urban planning, and design. Over the years, we have successfully completed the design for thousands of miles of roadway projects, ranging from small-scale roadway improvements to large-scale transportation infrastructure developments through every phase of the planning, preliminary design, and final design process. Our team has experience delivering conceptual alignment studies, conducting traffic and safety analyses, preparing project assessments (PAs) and design concept reports (DCRs), and construction documents. We have experience working with the Federal Highway Administration (FHWA) and understand the steps involved with federal processes and guidelines.

Our team of in-house experts are ready to assist the City with any transportation facility design task, with all of the following in-house design capabilities:

- Roadway design ranging from local roads to major arterial streets to freeway design
- Multimodal roadway design focused on pedestrian and bicycle friendly corridors, bike boulevards, multi-use pathways, curb ramp improvements, and Americans with Disabilities Act (ADA) and Public Rights-of-Way (ROW) Accessibility Guidelines (PROWAG) transition plans and compliance assessments
- Traffic engineering and signalization design including signing and pavement marking, traffic signals
- Intelligent transportation systems (ITS) and traffic operations
- Structural design including bridges, retaining walls, and drainage structures
- Roundabout planning and design implementation
- Landscape architecture and hardscape design
- Environmental planning and environmental assessments
- Transit planning
- Traffic analysis and safety studies
- Parking planning, assessments, and designs
- Private utility coordination and utility relocation

Storm Drain, Drainage Reports, FEMA Flood Studies

Kimley-Horn's surface water and drainage experience encompasses everything from traditional hydrologic/hydraulic analyses and design of storm drainage systems, culverts, and bridges to holistic urban watershed-based solutions that address flood control, water quality, aesthetics, and mitigation needs. Our team of experts have successfully completed projects nationally and across the Southwest, and we thoroughly understand arid region flood mitigation. Our surface water specific services include master planning, flood control design, hydrology and hydraulic analyses,

complex two-dimensional modeling, Federal Emergency Management Agency (FEMA) permitting, floodplain mapping, and public involvement.

Kimley-Horn expertise in these categories goes above and beyond in storm drain design and complex watershed master planning. Our storm drain design experience ranges from small systems to large flood control facilities. We have recently completed projects with storm drain up to 120" in diameter. We understand that the typical critical path for most storm drain design projects in utility identification, coordination, and relocation. Kimley-Horn has developed a scalable approach to minimize utility coordination and relocation delays as much as feasible to avoid project disruptions.

From a master planning perspective, Kimley-Horn has developed an approach for large and small watersheds that utilizes detailed 2D H&H (FLO-2D or HEC-RAS 2D) to initially identify hazards. We then engage the public and stakeholders with a robust outreach program to "ground truth" results. From there, we formulate conceptual alternatives that are implementable based on funding constraints and grant opportunities. This approach has worked well in securing grants and funding actual construction projects with attractive cost share programs for the local agency.

Utilities

Kimley-Horn brings a complete understanding of water/wastewater, and reclaimed water systems from the initial needs analysis and master planning to detailed design, construction phase services, and condition assessments. We have municipal experience in design and construction of a wide variety of projects, including planning and design of transmission and distribution pipelines; trenchless technology designs; right-of-way and easement coordination; utility coordination; pipeline rehabilitation; water/wastewater treatment facilities design; tanks and boosters design; lift station evaluation and design; flow monitoring; site security; and permitting. Many of our professionals are locally and nationally recognized in the field of lift stations, water/wastewater treatment membrane technology, and security management systems such as closed-circuit television (CCTV) surveillance, detection systems, field controllers, communications systems, and central control and monitoring.

Site Development

Kimley-Horn's dedicated development services staff have participated with many local municipal clients since our founding. Typically, our work is related to plan checks for new developments within a county or municipality. Our staff has provided, and is currently providing, such services as checking plans to verify compliance with local agency standards; providing tracking of revised plans and status of plans in the plan check process; supporting developers and their engineers in their efforts to get plan approvals per agency standards; and general support to county and city engineering and public works staff. Our team of development services engineers can work as an extension of City staff to assist with development plan reviews, permit compliance reviews, development coordinaton, or even to help with master planning efforts. We are also well versed with public presentations, public coordination, and can assist with presenting to City Council as necessary to assist with communicating planned developments.

Investigations and Studies

Kimley-Horn is a leading consultant in developing transportation plans, corridor studies, operational studies, parking studies, bicycle and pedestrian plans, safety analyses, freight plans, general plans, and transportation impact studies. We have assisted many local and state agencies in securing federal funding and developing transportation plans and programs for both short-term and long-range improvements. With expertise in conditions assessment, demand forecasting, environmental review, alternatives assessment, and cost-benefits analysis, Kimley-Horn has the experience to progress a project from the inception of a concept through the development and implementation of a plan.

Kimley-Horn also provides transit planning and engineering services throughout the U.S. From the largest regional agencies to small systems, Kimley-Horn's transit experts guide our clients through all phases of a project, from the early planning stages through final design and construction administration. For rural, urban, regional, and statewide transit systems, we provide comprehensive analysis, planning and design services, short- and long-term transportation plans, major investment studies, route planning, alternatives analysis, line-by-line analyses, on-board surveys, demand modeling, and environmental documentation. Our team understands that all facets of the transportation system—streets, transit, bicycling, and walking—must work together to build vibrant, sustainable communities.

Subsurface Utility Exploration (SUE)

The proper identification and locating of underground utility infrastructure can sometimes be the difference between a successful project and lengthy schedule delays. Our in-house SUE team has the capabilities to provide SUE Level B

services, providing the accurate locations of all underground utility systems, both public and private. This information enables our design teams to provide accurate utility conflict reviews and avoid surprise conflicts during construction.

In addition, our team provides expert utility coordination services, interfacing with private and public utility representatives to obtain mapping, locate existing facilities, identify conflict resolution/mitigation strategies, and coordinate private utility relocation, if necessary. Our prompt proactive utility coordination provides ease of mind to our clients and limits the potential for schedule and budget impacts.

Land Surveying

Our full-service land surveying team brings a wealth of experience providing all manner of land surveying services including boundary surveys, American Land Title Association (ALTA)/ National Society of Professional Surveyors (NSPS) surveys, ROW plans, legal descriptions/ exhibits, right-of-way and easement research, and Geographic Information System (GIS)/drafting support. Our team also frequently partners with local survey crews to provide high-quality topographic surveyors and aerial mapping for project sites.

Construction Contract Administration

Our team has experience in design, construction management, and inspection. We provide construction management and inspection services for projects that we design, including daily coordination with the City and the contractor, shop drawing reviews, request for information (RFI) responses, and field directives. We are experienced in evaluation contractor extra cost proposals, negotiating contractor change orders, reviewing contractor pay applications, and reviewing construction critical path method (CPM) schedules. We are also experienced working with low-bid, job order contract (JOC), and construction manager at risk (CMAR) contractors and we understand the unique benefits and challenges to each delivery method. Our background in both design and construction ensure that all coordination with the City and contractor is done in a timely and accurate manner. This helps keep projects on time while delivering a quality service to the City.

Design of Airport Facilities

When it comes to airports, Kimley-Horn has one of the largest aviation engineering practices nationwide, with over 250 dedicated aviation specialists. Our staff has worked on thousands of airfield projects across the country, and we have worked at every one of the large hub airports (30 of 30) in the United States. Our team has experts that specialize in airside and landside design, pavement management and pavement design, structural design, airfield hydrology/hydraulics/drainage design, airfield electrical and signage design, and construction administration and inspection services. Kimley-Horn's Phoenix and Mesa offices serve as design headquarters for our aviation practice with professional staff who work exclusively on airport projects daily. We have over 55 full-time aviation staff located here in the Southwest region capable of assisting on this project if needed to ensure project deadlines are met. Our local aviation professionals bring a tremendous amount of aviation experience and wide-ranging expertise that makes us perfectly suited to assist the City with any airport facilities design tasks that may arise.

Expert Witness

Kimley-Horn's forensic engineers and specialists apply accepted scientific and engineering principles to collect evidence and conduct the analysis to understand your case. Our licensed professional engineers are experts in evaluating claims related to property, buildings and/or building systems, vehicle crashes, premise liability, workplace accidents, fire causation, product failure, construction defects, structural failures, storm damage, and more.

Our advantage is in our experts' experience and understanding of the best strategy for the use of expert testimony coupled with the state-of-the-art engineering analysis. Our experts have the ability to provide clear answers in an efficient, timely manner, and to provide expert testimony when necessary. We have experts in mechanical engineering, civil engineering, and biomedical engineering providing analysis accepted in circuit and federal courts.

Insurance professionals and attorneys nationwide call on Kimley-Horn's experts with many years of practical experience, education, and specialized training. Kimley-Horn has more than 120 offices across the U.S. allowing our experts to draw on nationwide resources resulting in exceptional services. In addition, our experts are capable and experienced in providing vast technical data in a way that a jury can understand.

Project Management

Kimley-Horn's project management begins with a complete and thorough understanding of the project, including communication/coordination, assigned scope, schedule,

budget, and quality control requirements. Effectively managing these functions throughout the development of projects is paramount and we consistently:

- Take ownership of task orders
- Conduct productive meetings
- Employ effective communication with project team and stakeholders
- Identify issues and resolutions early
- Provide alternatives/options and recommendations
- Determine action items and make decisions
- Monitor project budget and schedule
- Respond quickly to design and construction requests
- Build QC into every task

Public Participation and Involvement

Kimley-Horn is sensitive to the role of meaningful public involvement programs that enable area residents to establish their priorities. Public involvement determines the overall design program, funding strategies, and implementation priorities. Our expertise in providing a broad range of services helps to ensure the successful implementation of your goals while addressing the specific challenges that each project entails. Kimley-Horn is known for developing innovative project approaches that involve neighborhood and community participation. We understand that some projects require community involvement and acceptance, and we have developed effective methods of bringing the community into the process. **Kimley-Horn is strongly committed to conducting public involvement programs that educate, inform, and build consensus for a particular solution. Each project is different in terms of the stakeholders and the critical issues involved; thus each public involvement program must be tailored to specifically address the project's needs.**

D. Project Schedule

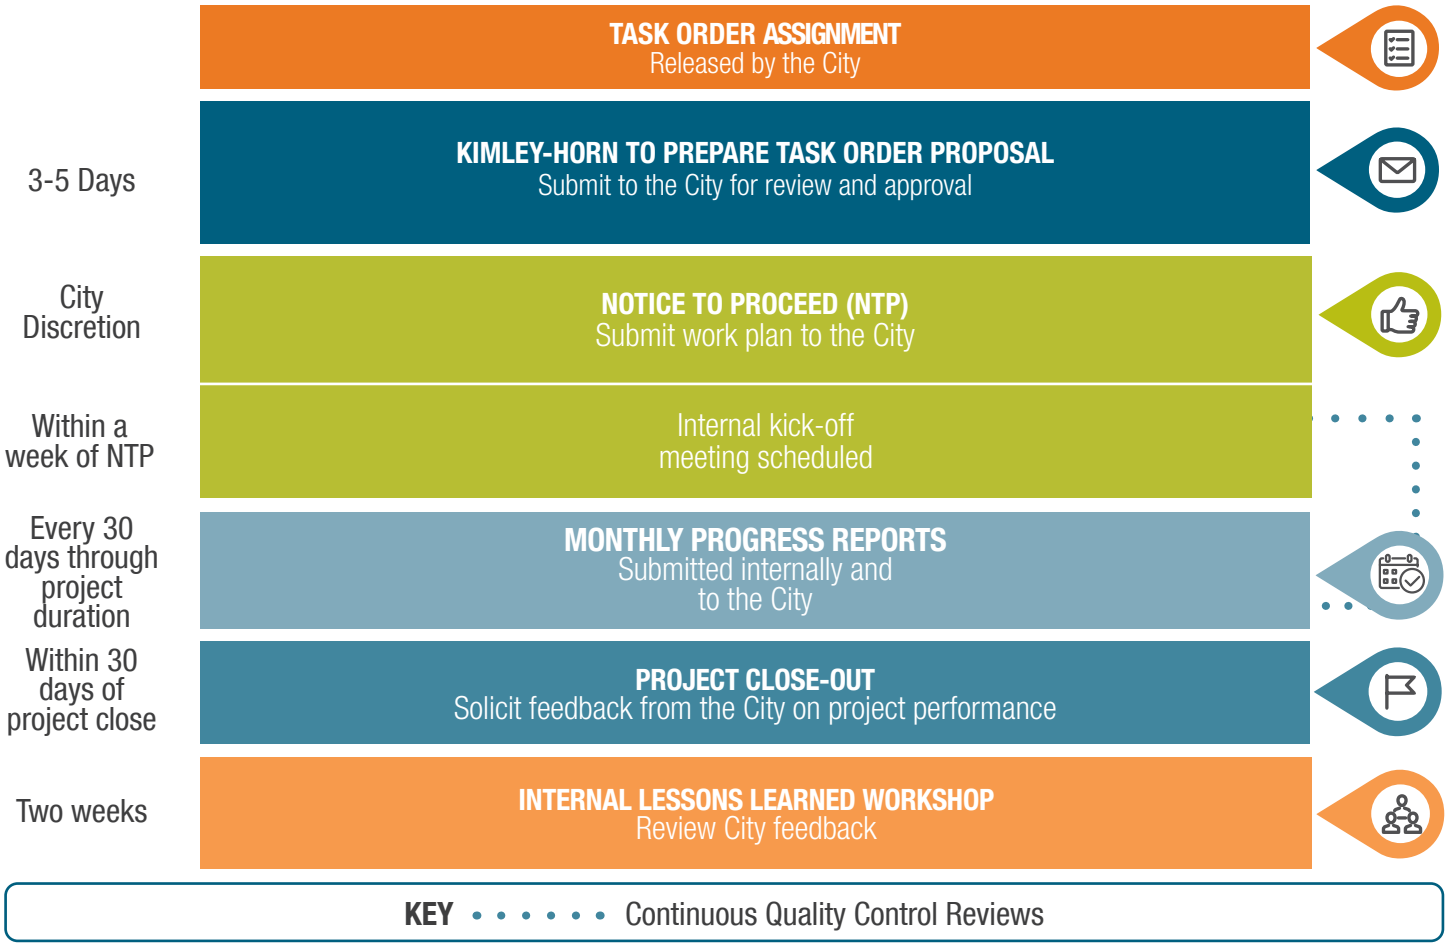
Meeting project schedules is beneficial to both the City and critical stakeholders. Our team recognizes that control of the schedule is vital to the success of any project that may arise during the contract. Through communication with City staff, our team will work to create and define project requirements, recognize potential obstacles to success, identify possible opportunities to achieve additional value within the identified budget, and create a project work plan that allows us to accomplish the City's goals. We recognize that meeting schedule demands allows stakeholders to feel that their approval of the funding was a wise investment. Kimley-Horn has developed a process that ensures our team works in concert with the City to maintain a comprehensive schedule approach to on-call task orders. We include City staff in critical decision-making points so the project team and City staff can agree upon the best course of action to keep the project on track at all times.

Due to our access to Kimley-Horn's large network of experts, we can address sudden requests on a moment's notice. Because City staff may get short notice requests, often requiring immediate attention, we can provide the City with fast response times and the necessary resources to respond to these often unanticipated and political projects. This may include providing the City with exhibits or cost comparisons within hours to satisfy the request.

Establishing internal project schedule deadlines is a successful technique to track schedule progress and provides an opportunity to use additional resources, if necessary, to deliver the project on time. We will develop an internal submittal schedule for the project team that begins typically one to two weeks before the City's submittal deadlines. This internal schedule includes milestone deadlines such as internal independent Quality Assurance/Quality Control (QA/QC) reviews, distribution of QA/QC comments to the project team, and final edits to construction documents.

The graphic below details our typical approach to on-call task orders.

Figure 1: Task Order Approach

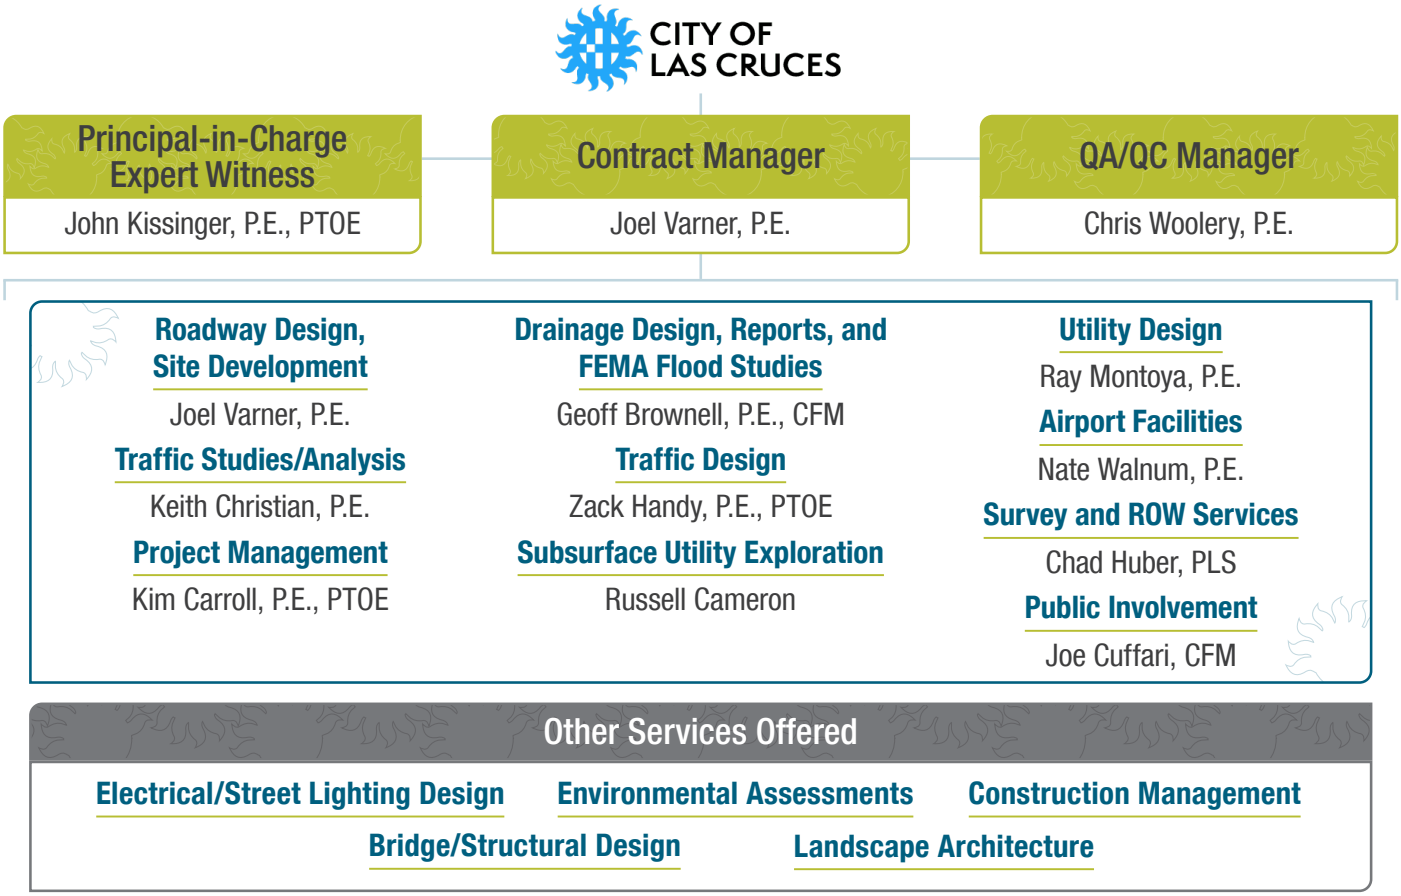


Evaluation Criteria No. 2: Qualifications and Competence

A. Key Personnel Qualifications

Our project team has been thoughtfully assembled to address all major design needs of this Civil Engineering Services On-Call contract. As you review, please note that each team member provides technical expertise directly related to one of the major technical scope of work items identified in the Request for Proposal (RFP), and we are able to address all major design elements of this on-call contact with our in-house team of planners and engineers. Below is our organizational chart, which details our project team and identifies key personnel and relationships among team members. This is followed by a description of experience, areas of competence, and a percent of time assigned to the project for our key personnel.

Organizational Chart



For additional information regarding professional licenses, please refer to the following three pages.

Team Bios

Joel Varner, P.E. // Contract Manager, Roadway Design, Site Development

14 Years of Experience
14 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (Pending)**, AZ

Joel offers 14 years of experience in transportation and civil engineering. His main area of expertise is in municipal roadway projects, where he has experience managing multidiscipline designs and coordinating the geometric, structural, drainage, and traffic components of complex transportation projects. Joel contributes considerable design knowledge and strong software skills, and his previous responsibilities have included roadway geometry and ADA design; pavement marking and striping layouts; preparation of final plans, specifications, and cost estimates; utility coordination; grading and drainage; and earthwork modeling. **As your Contract Manager, Joel will serve as the main point of contact for the City.**

Relevant Experience

- City of Phoenix, Engineering On-Call Services, Phoenix, AZ
- City of Goodyear, On-Call Services, Goodyear, AZ
- City of Glendale, On-Call Roadway Services, Glendale, AZ
- Coconino County, On-Call Engineering Services, Coconino County, AZ

John Kissinger, P.E., PTOE // Principal-in-Charge/ Expert Witness

37 Years of Experience
27 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (#25907**), AZ, CA, ID, IL, IN, IA, KS, MN, MO, MT, NE, NV, OH, UT, WA, and WI; Professional Traffic Operations Engineer (PTOE)

John has 37 years of consulting experience designing roadway, traffic, and ITS projects. John's experience includes leading projects from the initial planning and feasibility study stages through final design and construction. He also is experienced in the public involvement process including city council and large group presentations, facilitation of open house meetings, and leading small group and one-on-one meetings. **As your Principal-in-Charge, John will provide general oversight of the project to see that your needs are being met and that you receive a high level of service. He is also available to serve as an Expert Witness, if needed.**

Relevant Experience

- City of Las Cruces, Signal Timing at North Main and Solano, Las Cruces, NM
- City of Las Cruces, Signal Timing at Missouri and Triviz, Las Cruces, NM

Chris Woolery, P.E. // QA/QC Manager

30 Years of Experience
12 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ

Chris has 30 years of extensive experience in project management, engineering design, and construction. He has been responsible for the roadway design and utility coordination for numerous public projects throughout Arizona and surrounding states. His responsibilities have included the preparation of final design plans, specifications, and cost estimates; roadway design; grading and drainage design; water and sewer design; utility conflict identification and relocation; preparation of DCRs and PAs; coordination with city, county, and state agencies; and attendance at public meetings. **As your QA/QC Manager, Chris will be responsible for monitoring the quality of our performance on this contract.**

Relevant Experience

- City of Tucson, On-Call Traffic Engineering Services, Tucson, AZ
- City of Chandler, On-Call Civil Engineering Services, Chandler, AZ

Geoff Brownell, P.E., CFM // Drainage Design, Reports, and FEMA Flood Studies

25 Years of Experience
5 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ, CA, and NV; Certified Floodplain Manager

Geoff will call upon his 25 years of experience in drainage design, flood hazard analyses, and flood hazard mitigation. Geoff has served on numerous large and small drainage and floodplain studies, ranging from small storm drain improvements to large-scale master plans. He has led many projects developing one- and two-dimensional hydrology and hydraulic models for river systems, local and regional watersheds, and land development. As a former FEMA contractor, Geoff is also an expert in large floodplain mapping studies, map revisions, and the Conditional Letter of Map Revision (CLOMR)/Letter of Map Revision (LOMR) process.

Relevant Experience

- City of Goodyear, On-Call Plan Review, Goodyear, AZ
- City of Scottsdale, On-Call Stormwater Services, Scottsdale, AZ

Ray Montoya, P.E. // Utility Design

26 Years of Experience
8 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (#20889)**, AZ, HI, NV, and UT

Ray has 26 years of experience in the water/wastewater industry. He has prepared water and sanitary sewer improvement plans, water and sewer hydraulic computer models, master water and sewer studies, and water reuse system plans. His experience includes a wide range of projects in the water/wastewater industry including pipelines, pump stations, pressure-reducing stations, and various preliminary and detailed design reports. He has experience in pipeline and utility design utilizing alternative construction methods, including pipe bursting, slip lining, micro-tunneling, and directional drilling.

Relevant Experience

- City of Tucson, On-Call Transmission Mains, Tucson, AZ
- City of Las Vegas, Wastewater Treatment On-Call Services, Las Vegas, NV

Keith Christian, P.E. // Traffic Studies/Analysis

11 Years of Experience
11 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (#27998)**, AZ, and ID

Keith offers 11 years of experience having worked on a wide variety of traffic engineering, planning, and traffic systems design projects for public and private agencies. His projects involved obtaining and analyzing traffic data, creating macro and microsimulation traffic models, optimizing signal timings, assisting agencies with implementation and fine tuning, and providing recommendations and a final report. Keith's experience also includes transportation performance measures, traffic forecasting/analysis, and multimodal transportation planning/engineering.

Relevant Experience

- City of Las Cruces, Lohman Avenue Retiming Phases 1 and 2, Las Cruces, NM
- City of Las Cruces, Traffic On-Call Services, Las Cruces, NM

Zack Handy, P.E., PTOE // Traffic Design

7 Years of Experience
6 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ and ID; Professional Traffic Operations Engineer

Zack is a professional civil engineer with seven years of experience in the planning and design of traffic engineering projects. His traffic engineering experience includes traffic signal design, traffic signal planning, ITS design, signing and pavement marking design, traffic impact studies, traffic calming studies, parking studies, school circulation studies, and roadway capacity studies.

Relevant Experience

- City of Las Cruces, Traffic Impact Analysis (TIA) Review, Las Cruces, NM
- Town of Gilbert, Transportation On-Call, Gilbert, AZ

Nate Walnum, P.E. // Airport Facilities

28 Years of Experience
24 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ, FL, MI, NJ, NY, and UT

Nate has 28 years of planning, engineering, and management experience on a wide array of airport, transit, rail, roadway, and municipal projects. His planning experience encompasses facilities planning for airport infrastructure, including roadway improvements and Ground Transportation Centers (GTCs), curbfront management, parking, utilities, passenger simulation modeling, communications and security, as well as airfield design layouts and terminal apron layouts.

Relevant Experience

- City of Phoenix, Airport Plan On-Call, Phoenix, AZ
- City of Phoenix, On-Call Planning Services, Phoenix, AZ

Kim Carroll, P.E., PTOE // Project Management

31 Years of Experience
10 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ, LA, and UT; Professional Traffic Operations Engineer

Kim has 31 years of civil engineering design experience. She brings a wide variety of experience including roadway/intersection design, transportation planning, traffic studies, pedestrian/bicycle path design, ADA ramp evaluation and

design, traffic signal operations, traffic signal design, pavement marking and signing design, and construction phasing. She has overseen and delivered federally funded projects, including utility relocation and clearances, right-of-way clearances, environmental clearances, and material clearances. She has experience working on design-bid-build, JOC, design-build, and CMAR delivery methods.

Relevant Experience

- Town of Prescott, On-Call Traffic Engineering Services, Prescott, AZ
- City of Chandler, On-Call Transportation Services, Chandler, AZ

Russell Cameron // Subsurface Utility Exploration

21 Years of Experience
1 Year with Kimley-Horn

Russell is a construction and project management professional with 21 years of experience combining operational management, business development, and customer service expertise to maintain cost control levels while providing exceptional service in competitive domestic and international business markets. His expertise is with SUE, particularly focusing on utility designating, utility potholes, and utility relocation for all types of design projects pertaining to roadway, drainage, and new-build designs.

Relevant Experience

- Maricopa County, On-Call SUE Services, Maricopa County, AZ
- City of Mesa, SUE On-Call Services, Mesa, AZ

Chad Huber, PLS // Survey and ROW Services

30 Years of Experience
2 Years with Kimley-Horn

Professional Credentials:
Professional Land Surveyor in AZ, CO, and NV

Chad is a professional registered land surveyor with 30 years of experience working on projects in the public, private, site civil, and energy sectors. His experience includes boundary surveys, ALTA/National Society of Professional Surveyors (NSPS) surveys, ROW plans, and drafting. Chad provides oversight on all survey projects including the research, analysis, design, and documentation of survey results. His responsibilities also included cost estimates, project budgets, construction calculations, field notes, oversight of survey staff, and business development. Chad's clients rely on him as a trusted advisor for his expertise in the public, site civil, and energy sectors and his unmatched depth of knowledge in all things related to survey. His reputation for superior client service is built on a foundation of attention to detail, proactivity on projects, and dedication to understanding his clients' needs.

Relevant Experience

- Arizona State Land Department On-Call ALTA Land Surveying Services, AZ
- Town of Paradise Valley, Mockingbird Lane Final Design, Paradise Valley, AZ

Joe Cuffari, CFM // Public Involvement

13 Years of Experience
1 Year with Kimley-Horn

Professional Credentials: Certified Floodplain Manager (CFM)

With 13 years of expertise in construction, architecture, and engineering projects, Joe is a highly experienced public involvement coordinator with a proven track record in coordinating public engagement activities for a local government agency. His extensive background encompasses strategic outreach planning, development of collateral and mailings, stakeholder coordination, public messaging, and serving as a point of contact for constituents. He demonstrates a genuine willingness to listen to the concerns of impacted residents and effectively collaborates with project managers to identify agreeable and beneficial solutions, ensuring project success. As a public involvement coordinator, Joe's professionalism, qualifications, and commitment make him an invaluable addition to the team. His exceptional communication skills and results-oriented approach position him for success in driving impactful public involvement initiatives.

Relevant Experience

- City of Tucson, Bilby Road Modernization, Tucson, AZ
- Santa Cruz County, Patagonia Flood Mitigation, Santa Cruz, AZ

Our team prides itself on its ability to be highly responsive and readily available to meet the needs of our clients. We understand the importance of timely communication and are committed to providing quick and efficient responses to inquiries and requests. Whether it is addressing a concern, providing updates on a project, or offering guidance, our team is dedicated to being accessible and responsive at all times. We prioritize clear and concise communication, ensuring that our clients receive the information they need in a timely manner.

Additionally, we embrace collaboration and growth, always striving to enhance our knowledge and skills to better serve our clients. While we value a light-hearted and positive approach, we never compromise on the accuracy and value of our responses. If there is ever a question or situation where we do not have an immediate answer, we will openly communicate this and work diligently to find the information needed.

Overall, our team's ability to be responsive and available stems from our commitment to exceptional client service and creating an environment where our people can flourish.

The table below summarizes our key personnel's percent of time assigned for this contract.

Percent of Time Assigned To Contract

Key Personnel	% Assigned
Joel Varner, P.E.	60%
John Kissinger, P.E., PTOE	20%
Chris Woolery, P.E.	15%
Geoff Brownell, P.E., CFM	60%
Ray Montoya, P.E.	70%
Keith Christian, P.E.	60%
Zack Handy, P.E., PTOE	55%
Nate Walnum, P.E.	40%
Kim Carroll, P.E., PTOE	45%
Russell Cameron, PMP	60%
Chad Huber, PLS	60%
Joe Cuffari, CFM	60%

B. Contact Information and Roles for Firms Responsible for Contract Administration

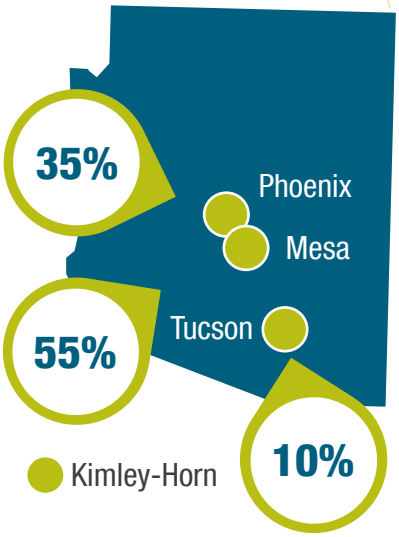
Kimley-Horn's contact information and areas of responsibility is shown below. **Hiring subconsultants on an as-needed basis is one of Kimley-Horn's strategic approaches. This flexible model allows us to bring in localized and specialized professionals on a project-by-project basis, tailoring our team to meet specific client needs.**

Firm Name and Principal Member	Areas of Responsibility
Kimley-Horn **Contract Manager:** Joel Varner, P.E. **Phone:** 602.906.1188 1001 West Southern Avenue, Suite 131, Mesa, AZ 85210 **Principal-in-Charge:** John Kissinger, P.E., PTOE **Phone:** 602.944.5500 7740 North 16th Street, Suite 300, Phoenix, AZ 85020	**Design for:** transportation facilities, storm drain, utilities, site development, investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, drainage reports and FEMA flood studies, airport facilities, project management **Additional:** Expert Witness, Public Involvement

"We have no reason to exist except to serve our clients"
Ed Vick, President, Kimley-Horn and Associates, Inc. 1972-1992

C. Location and Percentage of Work to Be Performed

The Kimley-Horn Mesa and Phoenix offices in Arizona will perform the majority of work for this contract. **Below, we have included a graphic to represent the percentage of work to be performed at each office location, which is based off of where team members sit and operate.**



D. New Mexico Registration

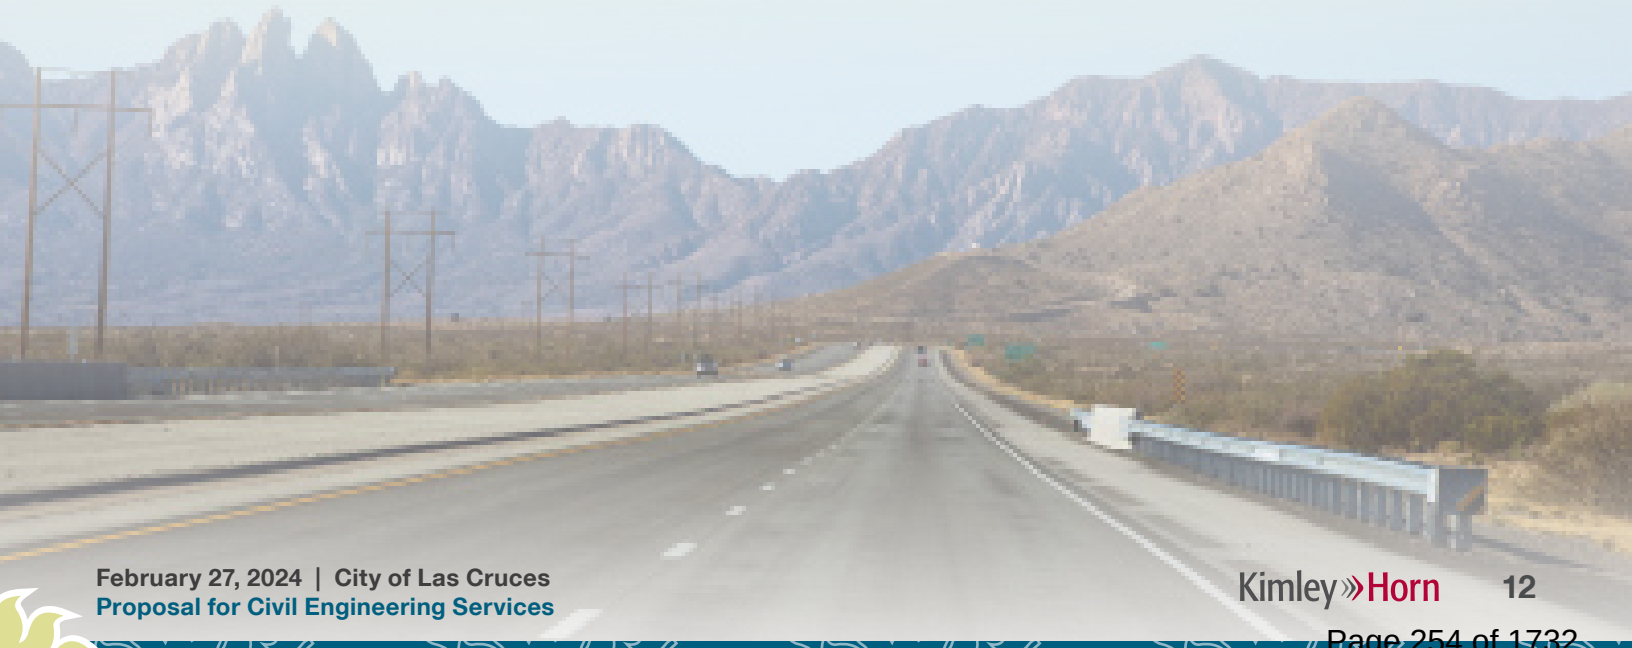
John Kissinger, P.E., PTOE is a Professional Engineer in New Mexico (#25907). He will be responsible for and in direct charge of the work taking place for this on-call contract.

As Contract Manager, Joel Varner, P.E. has demonstrated the knowledge and skills in the field of engineering and is actively working towards obtaining licensure in the state of New Mexico in addition to his currently active licensure in the state of Arizona. While his license is pending, he is still able to practice engineering under the supervision of John Kissinger, a licensed professional in New Mexico.

Other team members are registered in New Mexico, as identified in the Team Bio's section on pages 8-10.

Kimley-Horn has previously executed multiple agreements with the City of Las Cruces. We are confident that we will be able to reach mutually agreeable terms and conditions. We kindly request the City consider the following minor modifications:

- RFP, Page 10, F. Insurance Requirements, 1. Professional Liability: Professional Liability insurance is per claim, not occurrence.
- RFP, Page 10, 7.: Kimley-Horn cannot name the City as additional insured on workers' compensation and professional liability insurance.
- Professional Services Agreement, page 5, 18. Indemnity and Limitation: Strike "in whole or in part" all three times it appears in lines 3-4 and replace with "solely" as we have done in previously executed contracts with the City.



Evaluation Criteria No. 3: Performance of the Firm

Similar Experience

Kimley-Horn has successfully delivered on hundreds of civil engineering projects nationwide. **Below, we have included some of our most relevant experience accompanied by the client contact person for each project.**

City of Phoenix, Northwest Valley Transportation Engineering // Phoenix, AZ

Kimley-Horn has recently completed this extremely fast-tracked design project to meet an aggressive schedule for designing five miles of roadway. This project has involved complex coordination with numerous stakeholders including City departments, the Arizona Department of Transportation (ADOT), the FHWA, and various utility companies. We designed roadway improvements, including bike lanes and sidewalk, and drainage facilities. **Our team is currently providing construction phase services.**

Key Similarities: Roadway design, storm drain, traffic signing/marking, signals, utility design, site development adjacent, preliminary studies/investigations, SUE, construction administration, land surveying, drainage reports, FEMA floodplain study.

Contact Person: Mario Brown, Project Manager mario.brown@phoenix.gov 602.262.6553

Town of Paradise Valley, Mockingbird Lane Storm Drain Final Design // Paradise Valley, AZ

This project was first identified as part of an Area Drainage Master Plan (ADMP) for the Flood Control District of Maricopa County (FCDMC). The Town hired Kimley-Horn to complete a DCR and benefit/cost analysis. This project entails just over one mile of new storm drain and catch basins along an existing roadway to capture both onsite and offsite runs. FLO-2D was used to define the hydrologic and hydraulic conditions, and the major challenges included utility coordination and relocations. The Town also tasked Kimley-Horn with investigating roadway realignments and other traffic calming measures. Public involvement was also important to project success.

Key Similarities: Roadway/transportation design, FEMA floodplain planning and design, drainage/storm drain design, field investigations, traffic planning, public involvement, cost estimating.

Contact Person: Sam Kayat, P.E., CIP Manager skayat@paradisevalleyaz.gov 480.348.3541

Similar Experience - Cont.

ADOT Statewide Airport Pavement Management System (APMS) Program // Statewide, AZ

ADOT Aeronautics Group selected Kimley-Horn to provide pavement evaluation, design services, construction administration, and program management services for ADOT's five-year program for pavement maintenance at more than 60 Arizona airports (and recently just re-selected Kimley-Horn for the next five-years). Kimley-Horn performs site visits at airports identified in ADOT's pavement management plan to verify pavement distress information provided through ADOT's statewide Probable Maximum Precipitation (PMP). Kimley-Horn is responsible for developing plans and specifications outlining the application of maintenance-type rehabilitation options. Plan sets are specific to each airport, application, and program year. Each year five to 14 airports are maintained depending on the amount of funding available. Maintenance items include, but are not limited to: crack repair, crack seal, seal coat, thin overlays, mill and replaces, and partial reconstructions.

Key Similarities: Pavement design, investigations, construction contract administration, land surveying, airport facilities design, project management, construction inspection.

Contact Person: Matthew Munden, State Airport Engineer mmunden@azdot.gov 620.712.7647

In addition to the above-highlighted projects, our team has direct recent experience working with City staff on projects for the City of Las Cruces. **Shown below are our most recent contracts with the City, all of which were worked on by members on this on-call team.** We look forward to continuing our excellent working relationship with the City of Las Cruces as a part of this on-call contract.

Kimley-Horn - City of Las Cruces Project Experience:
Lohman Street Signal Retiming Phase 1
Lohman Street Signal Retiming Phase 2
Safe Streets and Roads for All (S4A) Grant Application
Fiber Support for Network Architecture
Third-Party Traffic Impact Analysis Review
High-Mast Lighting
Missouri Street and Trivits Street Retiming
North Main Street Retiming
Utility Locates IFB

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Molzen Corbin and Associates, of 1155 Commerce Dr, Ste F, Las Cruces, NM, 88011, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Molzen Corbin and Associates 1155 Commerce Dr, Ste F Las Cruces, NM 88011 ATTENTION: Kevin W. Eades

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

RE: Civil Engineering Services, RFP 23-24-050
(We are in receipt of Addendum 1, dated February 20, 2024, and Addendum 2, dated February 23, 2024.)

Dear Members of the Selection Advisory Committee:

Molzen Corbin is pleased to present this proposal to provide Civil Engineering Services to the City of Las Cruces. Our Las Cruces branch has served the City for 40 years, designing your roadway, water system, wastewater system, and drainage improvements. Our professional Civil Engineering services make-up the backbone of our Las Cruces office and provide the City of Las Cruces with a highly reliable local source for on-call engineering. Our ability to deliver is based on the following strengths:

- **Highly experienced, Multi-discipline Project Team:** Molzen Corbin employs 90 professionals in the field of public works engineering and architecture. This includes planning, design, and construction-phase services for street/roadway, interstate/interchange, stormwater/drainage, water, wastewater, recreation/park, municipal facility, and airport projects. In addition, we offer construction observation, regulatory compliance/permitting assistance, electrical engineering, mechanical engineering, and grants administration. We can address any needs that the City will require during the course of this contract.
- **Local Knowledge Base:** Molzen Corbin's engineers and architects are familiar with most of the City's infrastructure needs. Because of our diverse local experience in water, wastewater, gas, transportation, stormwater, and facilities, and our knowledge of your current infrastructure and future needs, we believe that Molzen Corbin is an ideal choice for this on-call contract.
- **Team Continuity:** Molzen Corbin has numerous senior engineers and architects that you are familiar with that have more than 40 years of continuous experience in the City of Las Cruces. You will not be dealing with new faces after the contract is signed. Our workforce is reliable, empowered, and motivated to once again serve the City of Las Cruces and we see our own success directly tied to Las Cruces' success.

We trust that the following submittal underscores the unique knowledge and benefits of the Molzen Corbin Team. We look forward to continuing our successful relationship with the City of Las Cruces.

Sincerely,
MOLZEN CORBIN

Kevin W. Eades, PE
President and Chief Executive Officer

1. Technical Approach to the Project

About Molzen Corbin

Molzen Corbin is a nationally ranked firm with deep roots in this State. We have provided a diverse portfolio of engineering services to New Mexico's public entities since 1960. Molzen Corbin has a successful branch office in Las Cruces, and has served the City for over 40 years. Our strong track record for the delivery of high-quality projects on time and within budget is reflected in the fact that 90% of our business comes from repeat clientele. A majority of the clients we began with 64 years ago are still with us today on a retainer basis.

Technical Approach

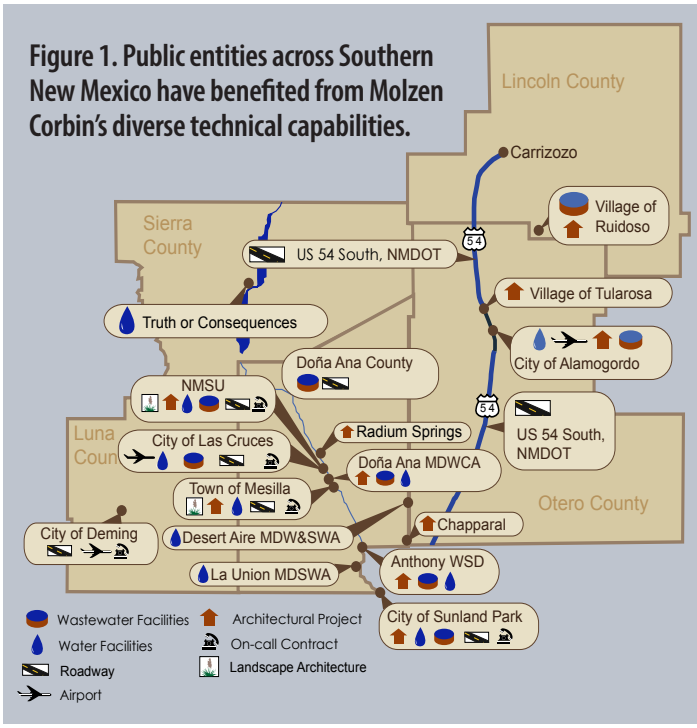
As we have in the past, Molzen Corbin will continue to provide planning, design, and construction phase services on a work-order basis. We will also provide day-to-day consultation services and attend conferences and meetings to remain informed about projects and issues. Molzen Corbin's general process and approach is as follows:

- **Project Scoping/Programming:** Work with the City to fully define the scope for each project. This step is arguably the most important step in any project. To fully understand your needs, we will continue to work closely with the City in an open exchange of ideas. Using your input, we will develop a project scope that is a full and accurate reflection of your needs and goals.
- **Studies:** Gather data including on-site measurement, drainage studies, master plans, utility rate studies, and other pertinent information.
- **Preliminary and Final Design:** Prepare complete working drawings, technical specifications, contract documents for bidding (e.g., bonds, insurance, etc.), quantity take-offs, and cost estimates.
- **Bidding:** Provide assistance in advertising for bids, distributing plans and documents for bidding, receiving and tabulating bids, award recommendations, checking bond and insurance forms and issuing notice to proceed for construction.
- **Construction:** Provide project/construction observers (full time if required), inspection services if desired.
- **Project Closeout:** Prepare drawings for permanent records, including changes; provide O&M manuals and operator training for treatment plants or electrical system projects.

Technical Capabilities

Molzen Corbin employs 90 in-house professionals in the fields of civil, water, wastewater, electrical, mechanical, and airport engineering; architecture and landscape architecture; surveying; planning; and grants administration. We offer the operational agility and depth of staff needed to provide highly responsive services to the City. The map below (Figure 1) illustrates the depth and breadth of Molzen Corbin's technical experience in

Figure 1. Public entities across Southern New Mexico have benefited from Molzen Corbin's diverse technical capabilities.



Southern New Mexico. Following we describe our technical capabilities in civil engineering.

Transportation Engineering

Molzen Corbin has designed more than 880 miles of highways, streets, and roads throughout New Mexico, including rural roadways, residential streets, and urban arterials, as well as rural, urban, and interstate highways. **Our transportation experience has included a wide range of design elements, including utilities and storm drainage; bridges and street paving; curb, gutter, and street lights; bike lanes; roundabouts; street and sidewalk improvements; and ADA compliance and right-of-way (ROW).** Figure 2 illustrates our Statewide experience in roadway design.

Drainage Design

Molzen Corbin has worked with entities ranging from the New Mexico Department of Transportation (NMDOT) to the U.S. Army Corps of Engineers, Albuquerque Metropolitan Area Flood Control Authority, and municipalities across the State in addressing drainage projects, including in the City of Las Cruces. Our project experience includes drainage master plans, new drainage systems, flood control structures, and extensions to existing systems in conjunction with road design and site development projects (see Figure 3).

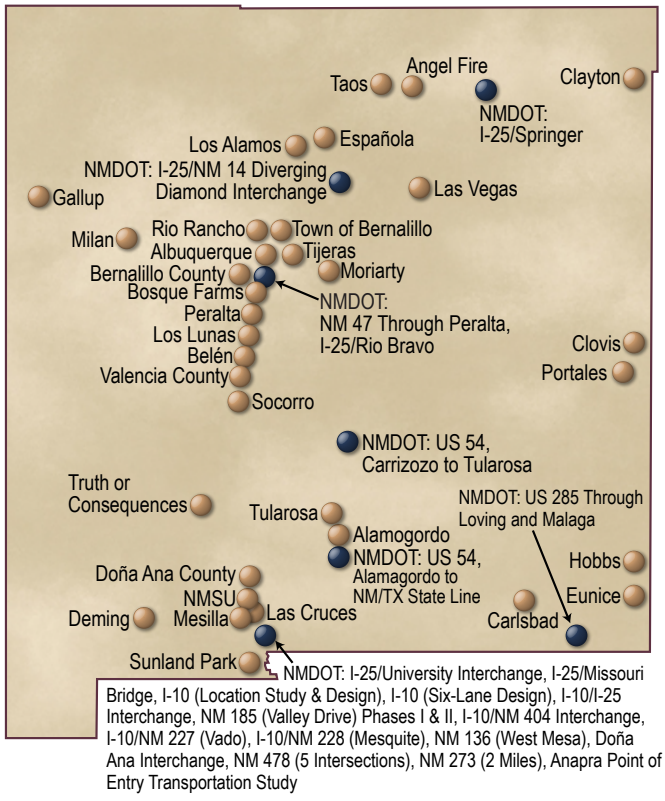


Figure 2. Molzen Corbin's statewide experience in the design of transportation facilities.

Sitework

Molzen Corbin's Civil Engineering Division is experienced in site development plans for new or renovated buildings or structures. Our team prepares drainage and grading plans, utility layout plans, and stormwater pollution prevention plans for government and commercial facilities. These site plans are developed with sensitivity to the surrounding environment to match the character of the area in which they are located. Earthwork is minimized based on

Project Highlight: I-25/University Interchange, NMDOT

Molzen Corbin recently completed the I-25/ University Interchange Project. This NMDOT-led project was a collaborative effort between the NMDOT, City of Las Cruces, and NMSU to ease traffic congestion along I-25 and University Avenue and to improve multi-modal access and safety through and around this high-volume intersection. This project included a direct connection from I-25 to the NMSU campus via a new bridge on University Avenue that allows the interstate off-ramp and Triviz Avenue to pass under University Avenue. Also included were two new roundabouts that are specially designed for all modes of transportation from large semi-trucks to pedestrians. The City of Las Cruces also made a substantial investment in the project with new "gateway" landscaping, as well as water and gas utility improvements.

Highlights included virtual public meetings to increase public participation for this major reconstruction project, a bridge art committee to select showcase art for the bridges and retaining walls, an Envision Silver rating for sustainable infrastructure, and a focus on improving multi-modal access and safety for students by connecting to existing trails and parks within the community.

site conditions and balanced with the needs of the facility. Our site development plans have included sites as small as half-acre commercial lots to a 50-acre resort development.

Utility System Design

Molzen Corbin has designed thousands of miles of water, wastewater, reclaimed water, storm-water, and gas pipelines throughout our 64 year history. Our experience has included evaluation of existing pipelines, design of new pipelines, rehabilitation of existing pipelines, in-situ rehabilitation, alignment/routing studies, trenchless installation, and cathodic protection. Figure 4 below provides a snapshot of our experience with designing utility lines.

Architecture/Landscape Architecture

Molzen Corbin's in-house architectural division specializes in user-friendly architectural design for public entities. Our team's range of experi-

Project Highlight: Harrelson Street, City of Las Cruces

Molzen Corbin completed the survey (topographic and ROW) and roadway design for Harrelson Street, which servers as a collector street through a mix of land uses: manufacturing, residential, and historic. The project consisted of utility replacement, storm drain throughout the length of the project, and a complete urban road replacement section.

The existing condition of the road was poor with drainage issues from beginning at Conway to end at Union Avenue (NM373). Molzen Corbin worked with NMDOT to redesign the intersection at Union Avenue (an NMDOT roadway) with utilities, storm drain, and a new roadway section. Our challenge with the utility design was to replace the water, sewer, and gas connections to the side streets while keeping the existing utilities in service. This was done by paralleling the lines with minimum space and phasing the construction so that existing utilities could be abandoned upon completion. Utility services was transferred once the new utilities were completed.

The storm drain system also needed to be situated within the utilities so that a separation could be accommodated. The storm drain system consisted of curb drop inlets, connection pipes, trunk lines, and a retention pond. Molzen Corbin worked with the City's Public Works and Utility Departments to evaluate spacing between the facilities that everyone could agree on. The existing pond on the south side of the project was undersized, and we designed it for additional capacity for the storm runoff from Harrelson Street and its surroundings.

The roadway design consisted of sidewalks, curb/gutter, asphalt roadway section, concrete driveway pads, and revisions to the area lighting system. The vertical roadway profile was designed to have peaks and valleys to collect water while taking precautions so that the hydraulic profile did not exceed the top of the curb at the low points. This is important as anything above that could potentially flood the adjacent buildings.

The street light spacing needed to meet a mix use of residential, historic, and commercial land use through the project. Molzen Corbin utilized the existing street electrical circuit and re-used the existing mast-arm street lights, as well as the existing ornamental lights along Union Avenue, for cost savings. The project was successfully completed on time and within the budget.

Figure 4. Molzen Corbin has designed miles of utility and water transmission lines across the State.

Type	Project/Client	Pipeline
Water	Mountain Park Number 1 to Mountain Park Number 2 Water Line Extension, EPWater	2,600 Linear Feet (LF) of 24-inch transmission line; 1,440 LF of 12-inch service line; 2,410 LF PVC service line
	Double Eagle Water System Improvements, City of Carlsbad, NM	Phase I–II: 211,200 LF of 16-inch and 24-inch waterline Phase III: 21,160 LF of 24-inch waterline; 9,650 LF of 16-inch waterline; 630 LF of 12-inch waterline
	Water System, Spaceport America	63,360 LF of 24-inch and 16-inch waterline
Wastewater	Sonic Lift Station, AWSD, NM	3,500 LF of 21-inch sewer line; 6,500 LF of 12-inch forcemain
	Valley Drive, City of Las Cruces, NM	3,450 LF of 8- to 15-inch sewer line
	Sewer Interceptor, Village of Los Lunas, NM	Phase I: 9,000 LF of 8- to 30-inch sewer line Phase II: 25,000 LF of 8- to 24-inch sewer line
Storm	Valley Drive, City of Las Cruces, NM	7,800 LF of 18- to 72-inch storm drain line
	Harrelson Street, City of Las Cruces, NM	1,200 LF of 18- to 24-inch storm drain line
Gas	Gas System Improvements, Phase I, City of Deming	19.8 miles, 2-inch poly gas main and 8.4 miles, 4-inch poly gas main with services
	North Valley Drive, Las Cruces/NMDOT	1.49 miles MDPE gas line with services

ence includes the planning and design of diverse public works facilities and municipal buildings, from well houses and booster pump stations to Town Halls, public safety complexes and public parks.

Molzen Corbin has produced landscape designs and site plans for buildings, public spaces, roadways, parks and recreational areas, and other facilities. Our park designs have included gymnasiums; athletic fields; courts for pickleball, tennis, basketball, and volleyball; picnic areas and parking areas; trails; aquatic facilities; native, exotic, and specialized landscaping and irrigation; skate parks; and stormwater features (such as ponds, arroyos, and bridges).

Selected project examples further demonstrating the Molzen Corbin Team's experience and capabilities are provided in Section 3.

Molzen Corbin's Specialized Services

Molzen Corbin recognizes that project demands often go beyond technical tasks, and as such we offer a diverse portfolio of special services.

- **Master Planning:** Molzen Corbin has prepared numerous Master Plans for our municipal clients that included segments of the community that required special study or for improvements to the community as a whole. These Master Planning efforts have included Comprehensive Plans, Water Master Plans, Wastewater Master Plans, Stormwater Master Plans, and Transportation Plans.
- **Public Involvement:** Molzen Corbin typically schedules and conducts all of the public meetings to communicate project information, and attends City Council meetings.
- **Expert Witness Testimony:** Molzen Corbin has been a reliable expert witness for the City, and can continue that relationship in the future if called upon.
- **Bid Documents:** Molzen Corbin has designed public works projects for public entities, including plans and specifications developed in compliance with State and Federal regulations and procurement requirements, local procurement requirements, and industry standards.
- **Surveying:** Molzen Corbin's in-house surveying capabilities range from base mapping to detailed infrastructure surveys, performed by experienced surveyors using state-of-the-art Trimble R10 Integrated GNSS System. Our team has field experience with the finish techniques required by the City of Las Cruces.

- **Construction Observation:** Our in-house observers have been very effective in ensuring that our projects are constructed to the highest level of quality and conformance to the contract documents.

Management Structure and Approach

Molzen Corbin pioneered the use of on-call engineering and architectural agreements in the 1980s. Today, on-call clients remain at the heart of our business. We currently hold on-call contracts with 51 municipalities and counties, including with the City of Las Cruces. We are organized and staffed expressly to meet the day-to-day and long-term needs of public entities, providing rapid response and personalized service.

Day-to-Day Operation of the Contract

Molzen Corbin offers the operational agility and depth of staff needed to provide highly responsive services to the City of Las Cruces. Our proposed project manager, Mr. John Montoya, PE, PS, PTOE, is a Molzen Corbin Vice President with more than 30 years of project experience with the City. He is very knowledgeable with our on-call approach and procedures, as well as with City staff and processes. Following, we describe our management and operational approach.

- **Day-to-Day Technical Services and Small Task Order Work:** Mr. Montoya will serve as the City's primary point of contact. When the City needs day-to-day technical services or requests small task order work, you may call Mr. Montoya directly. He will either assist you himself or assign a lead engineer from the appropriate discipline to provide the needed service.
- **Large Projects:** For larger design projects Mr. Montoya will either serve as Project Manager or assign that role to an experienced engineer from the appropriate discipline. Once the project begins, the City may interface with either Mr. Montoya or the Project Manager. Project Managers will provide Mr. Montoya with regular updates on project schedules, budgets, status, and other issues.

Project Highlight: West Mesa Water System Improvements, City of Las Cruces

This was a four-phase project that included various water supply, transmission, and storage improvements:

- A high-capacity booster station consisting of three 1,000 gpm booster pumps
- Well No. 63 and Well No. 64 well house improvements, each with a capacity of 3,500 gallons per minute (gpm)
- Design of a 4.5-million-gallon reservoir, which involved unique foundation and site conditions to meet Bureau of Land Management (BLM) requirements
- Approximately 11,500 linear feet of 18" waterline that ties the booster station to the existing West Mesa Industrial Park
- Approximately 35,000 linear feet of 36" transmission line to connect the west side system to the City's east side Missouri system. This effort involved a crossing of the Rio Grande and numerous ditch, drain, and highway crossings.

Molzen Corbin took the lead in assisting the City with the Environmental Assessment; BLM permitting of easements for waterlines; International Boundary & Water Commission licensing of the river crossing; various other irrigation, highway, and county permits; and 12 private easements for the installation of various facilities. Our analysis also included preparing an alignment study of various route alternates for the water transmission line and an evaluation of various methods for crossing the Rio Grande.

Tasks to be Accomplished

Following are a few of the services we will provide to the City under this contract:

- Transportation facility design
- Storm drain design
- Utility design
- Site development (e.g., grading and drainage design)
- Studies and investigations
- Subsurface utility exploration
- Land surveying services
- Airport facility design
- Drainage studies, including FEMA flood studies
- Project management

- Construction inspection and administration
- Expert witness in a judicial and/or quasi-judicial setting

Services to be Provided Under Each Task

Scoping Meeting

When contacted by the City of Las Cruces, Molzen Corbin will form a scoping team consisting of staff from the City, Molzen Corbin, and subconsultants. The scoping meeting will provide all parties with the opportunity to discuss project parameters, ask questions, and work together to resolve challenges.

Molzen Corbin will carefully consider the input of the City's user group in identifying elements that will influence the scope, schedule, and budget of each project or task. To ensure that the City gets the most value for money spent, we will also address funding sources and look for opportunities to narrow the scope so that unnecessary tasks are eliminated. A project schedule with milestone dates will also be established at this meeting.

Such up-front project development will not only be used as the basis of the engineering agreement, it will serve as a guide in the execution of the task order.

Milestone Meetings

Mr. Montoya and key project team members will meet with the City at the conclusion of each task to update the City on project status, review technical information, answer questions, and solicit feedback from the City to ensure that the project is continuing on schedule and to the City's satisfaction. Examples of key milestone meetings for a roadway project are as follows:

- Drainage Plan Review
- Survey and Existing ROW Review
- Existing and Proposed Utility Review
- Roadway Alignments
- Roadway and Utility Profiles
- Lighting and Erosion Control
- Right-of-Way Acquisition (if needed)
- Technical Conflict Resolutions (utilities, ADA, drainage, driveways, etc.)
- Environmental Document Review

Project Highlight: NM 314 Pedestrian Improvements, Village of Los Lunas

Under our on-call contract with the Village of Los Lunas, Molzen Corbin assisted the Village with pedestrian improvements to NM 314 from Morris Road to Romeroville Drive. The purpose of this project was to beautify the corridor and promote alternate modes of transportation. Safety for bicyclists and pedestrians was the Village's primary concern, so Molzen Corbin designed a multiuse trail with lighting, landscaping, and fencing.

Major improvements included:

- Constructing a multiuse trail for pedestrian and bicycle traffic.
- Installing signing and striping to clearly indicate who the trail is intended for and how to navigate it safely.
- Planting Village-friendly landscaping to not only make the corridor beautiful, but aid drainage concerns by allowing for infiltration and mitigating erosion. The trees will grow to provide shade to the users of the trail and the overall palette is consistent with the accepted concepts of the Village.
- Lighting was also installed to promote safety along the corridor and the luminaires provide a design touch unique to the Village.
- Decorative fencing was constructed along the railroad to prevent conflicts between the trains and pedestrians. The fencing addition provided an element of safety immediately after construction, but it will also aid in creating a Railroad Quiet Zone in the future.

This corridor utilized several phases to construct the pedestrian improvements along NM 314. Construction for the first phase began in July 2018 and was completed in May 2019. It cost $2,448,047, of which $2,017,540 was funded by FHWA Small Urban Funds and Transportation Enhancements Fund. The second phase began construction in April 2020 and was completed in March 2021. It cost $2,894,135, of which $2,124,426 was funded by FHWA Small Urban Funds.

Final Design Review

Molzen Corbin will also hold design review and final design review meetings with the City to coordinate the final plan set for bidding and complete minor changes. All design elements will have already been reviewed during the milestone meetings, which should be the basis of the final design drawings.

Quality Control

To ensure that the City receives the highest possible quality on each project, Molzen Corbin will implement a peer review quality control plan, with oversight provided by Mr. Jerry Paz PE.

Molzen Corbin and our subconsultants will each conduct a quality review of the other firm's work for each project or task. Each review will consider completeness, accuracy, and whether the work is meeting the project goals.

This peer review process is essential to the development of the project and will be integrated into scheduled project team meetings. Frequent, thorough quality checks will enable the project team to identify and correct potential problems during the project, when they can be addressed in a cost-efficient manner.

Project Schedule

Molzen Corbin has sustained an excellent performance record for timely delivery of projects and control of costs. Figure 5 below provides examples of Molzen Corbin's cost and schedule performance on similar relevant projects. Our approach to controlling costs and meeting schedules is summarized below.

Cost Control During Design

- **Planning for the Project:** Starting with a detailed planning effort helps to define the scope of work for any project. Detailed planning and the corresponding coordination effort helps to ensure that the client and engineer are working toward the same goals. It is also much easier to make changes during a planning phase than during design. Finally, a well-thought-out plan results in a shorter design schedule and a corresponding project cost savings.
- **Control of Work Hours:** Molzen Corbin uses project management and cost accounting software to develop a design fee cost estimate, or budget, for each task based on manhours and rates. Our cost accounting system generates cost reports automatically every week. We use these to compare each task's manhours used to the manhours remaining in the budget and the estimated percent complete. This proactive approach allows us to identify deviations from the project plan early on and make appropriate adjustments to mitigate any impacts on the design costs.
- **Review of Percent-Complete Report:** Each month the project manager submits a percent-complete report for review by the appropriate department head. If the percentage of budget expended is greater than the percentage of completion (*e.g.*, a project is only 20% complete but 50% of the budget is expended) and the project scope has not changed, then the department head assigns more resources (without cost to the owner) to enable the project to achieve completion.
- **Proactive Communication:** Communication between the client and engineer throughout design is essential to cost control. We establish a budget early on and use milestone meetings to communicate design progress and estimated costs.

Schedule Control

Molzen Corbin has a fully staffed office in Las Cruces to serve communities and municipalities in southern New Mexico. This local office makes

Project/Client	Estimate	Close Out	Owner's Deadline	Completion Date
I-25/University Interchange, NMDOT	$38,000,000	$35,327,282	October 2021	October 2021
Valley Drive (Phase II), NMDOT	$22,973,000	$25,598,110	March 2020	April 2020
Bowman Avenue, Mesilla	$443,860	$428,297	November 2019	November 2019
Harrelson Street, Las Cruces	$786,402	$824,739	November 2018	November 2018

Figure 5. History of Past Performance

Molzen Corbin especially suited to respond to the City's needs in this contract. Molzen Corbin's success in delivering projects on time is due primarily to three important factors:

- **Detailed Project Schedule:** A detailed project schedule is developed and includes critical milestones and activities required of all stakeholders including project production and review. The schedule is used as a tool to help manage project progress and regularly scheduled meetings are used to secure valuable input.
- **Local Project Control:** Because Molzen Corbin is a New Mexico company and is locally owned and operated, project control is established effectively and efficiently. The local control allows dedication of all resources needed to meet critical deadlines while providing the agility needed for unanticipated changes.
- **Team Experience:** Our team has been working together on similar projects for many years. This experience translates to effective and efficient production of design documents.

Sample Project Schedule

Figure 6 shows a sample work schedule with project milestones. Molzen Corbin utilizes Microsoft Project, Primavera, and SureTrack scheduling programs to manage the work flow and meet project deliverables.

Figure 6. Molzen Corbin sample project schedule, including major phases and tasks.

Project Highlight: I-25/Missouri Bridge, NMDOT

The NMDOT had a very strict funding deadline for improvements to the I-25/Missouri Bridge and placed its confidence in Molzen Corbin to deliver the Phase 1A/1B Location Study, Phase 1C Environmental Study, Phase 1D Preliminary Design, and Phase 2 Final Design in less than 13 months. The I-25/Missouri Bridge project was awarded the top 2018 Engineering Excellence Award in the Transportation Category by the American Council of Engineering Companies (ACEC)/NM.

2. Qualifications and Competence of Team

Molzen Corbin has a solid track record for meeting project schedules, including condensed schedules. Our project experience, depth of staff, and technical expertise enable us to quickly mobilize our resources to align them with concurrent activities on complex projects.

As a multi-disciplinary firm, Molzen Corbin has the technical expertise and in-house staff to successfully complete the diverse range of tasks and services anticipated under this contract. Based on our extensive engineering and analysis experience, along with our depth of our staff and our familiarity with the City of Las Cruces, we can unequivocally state that we will be able to accommodate the City's project needs, including any and all specialized services, to meet any necessary time limitations.

We have assembled a highly experienced project team to effectively execute this contract for the City of Las Cruces. An organizational chart illustrating our team members and their roles and responsibilities appears below (Figure 7). On the following pages, we provide résumés of our key project team members, including their experience, area of competence, and percent of time assigned to project.

Key Personnel

John Montoya, PE, PS, PTOE: Project Manager

NM PE #12423, NM PS #13057, PTOE #3426 | B.S. in Civil Engineering Technology, NMSU | Years of Experience: 39 | Time Assigned: 20%

Mr. Montoya is a Molzen Corbin Vice President whose 39 years of experience encompasses assignments as a design engineer, project manager, client manager, and company surveyor on public works projects across southern New Mexico. These projects have included traffic engineering, roadway design, major arterial design, multimodal transportation planning and design, site development, water and wastewater system design, drainage and grading design, and stormwater detention basin design. Mr. Montoya also has

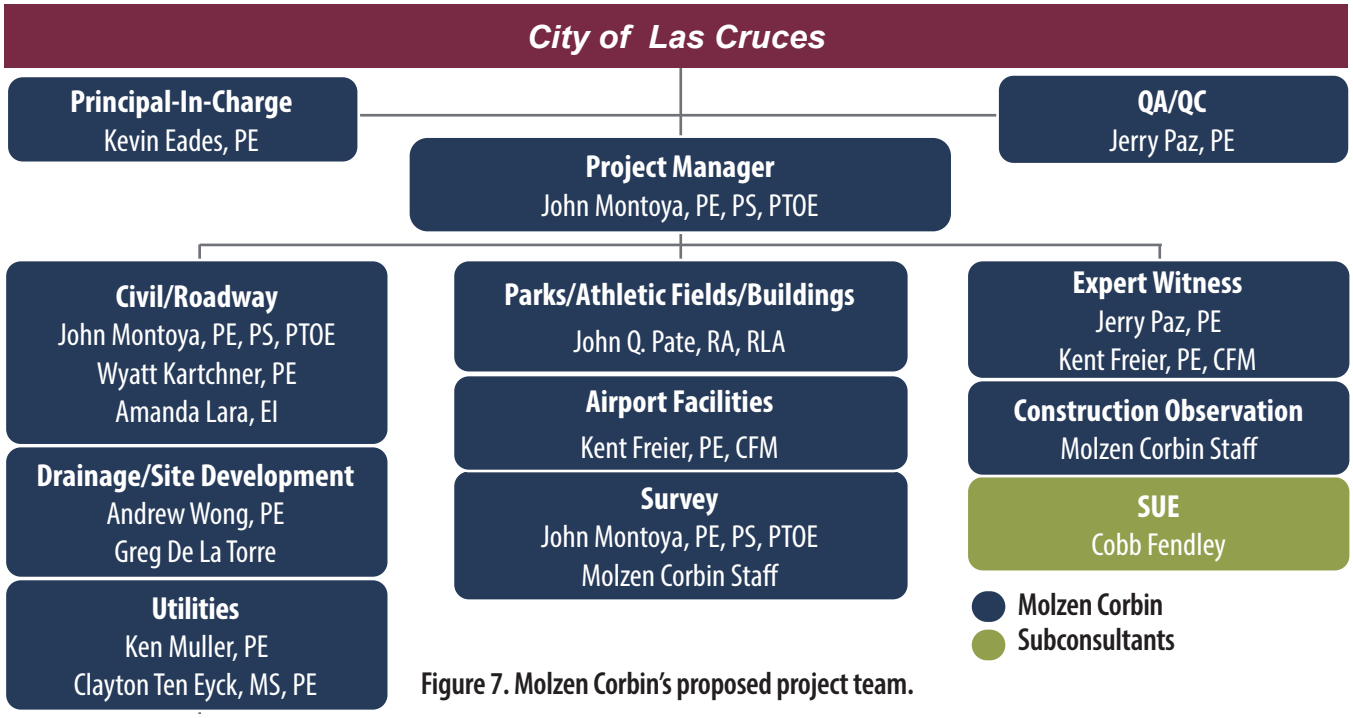

Figure 7. Molzen Corbin's proposed project team.

considerable experience in the field of surveying and is a registered professional surveyor.

Mr. Montoya's project experience with the City of Las Cruces has spanned several decades, and he currently serves as the project manager for our engineering on-call contracts with the City of Las Cruces. His project experience with the City includes Harrelson Drive, Reynolds Drive, 14th and 17th Streets, the West Hadley Avenue Reconstruction, and roadway design for the CD-9 and CD-12 Street Improvements. He has also provided parking lot design, airport design, street lighting design, signal design, fencing design, and storm sewer and site development, including drainage and grading design. Mr. Montoya also has considerable experience providing transportation design and engineering service for numerous NMDOT projects in the region, including I-25/University Interchange Improvements (Las Cruces), Arrowhead Interchange Study, and West Mesa Corridor Phase A/B Study.

Areas of Competence: Project Management, Traffic Engineering, Roadway Planning and Design, Multi-Modal Design, Surveying, Site Development, Water and Wastewater Design, Computer Network Analysis, and Master Planning

Kevin Eades, PE: Principal-in-Charge

NM PE #14481 | B.S., Civil Engineering, NMSU | Years of Experience: 29 | Time Assigned: 2%

Mr. Eades is Molzen Corbin's President and Chief Executive Officer with 29 years of professional project management, master planning, and design experience. He has strong project management and client-relations experience and is especially talented in working with clients on a one-to-one basis to ensure that their needs are met. In addition to project coordination and development, he has designed and managed drainage, water, sewer, traffic, and roadway improvement projects across the state. He has served as the Technical Services Manager for numerous on-call contracts, including Belen (27 years), NMDOT (27 years), and Los Lunas (27 years), covering tasks across all engineering disciplines.

Areas of Competence: Project Management, Contract Management, and Traffic Engineering.

Jerry B. Paz, PE: QA/QC

NM PE #10521 | B.S., Civil Engineering, New Mexico State University (NMSU) | Years of Experience: 40 | Time Assigned: 4%

Mr. Paz is Molzen Corbin's Chief Operations Officer and leads our Water Resources Department. He has 40 years of experience in the design and management of water-related projects, including development of water master plans and design of numerous transmission, storage, and distribution improvements for communities across New Mexico. In addition, he has extensive experience as engineer-in-charge of large regional wastewater system design and improvements, and in performing quality control reviews of small to large regional wastewater and water resources system projects for planning, design, and construction of improvements. Most recently, he has been responsible for the planning and design of over $900 million in infrastructure improvements in New Mexico and Texas.

Areas of Competence: Quality Control and Document Review, Roadway Design, Water and Wastewater Design, and Expert Witness

Wyatt Kartchner, PE: Civil/Roadway

NM PE #20843 | Education: B.S. in Civil Engineering, NMSU | Years of Experience: 16 | Time Assigned: 15%

Mr. Kartchner is a Molzen Corbin Vice President and Principal Engineer with more than 16 years of experience. He has successfully managed numerous multi-million-dollar roadway, water, wastewater, and drainage projects and studies throughout the State. He specializes in transportation projects, including roadway and interchange design, drainage analysis and design, and utility planning and design. He served as project manager and lead engineer on the NMDOT I-25/University Interchange Project at the NMSU campus. His

experience with the City of Las Cruces includes the Sandhill Arroyo LOMR and Jacob A Hands WWTP Screw Pump Conversion.

Relevant Experience: I-25/University Project, NMDOT; I-25/Missouri Avenue Bridge Replacement Roadway Design, NMDOT; Valley Drive, NMDOT; I-10 Six-Lane Project, NMDOT; and I-10/I-25 Interchange, NMDOT.

Areas of Competence: Roadway Design, Drainage, Utility Planning and Design, Master Planning, and Community Involvement

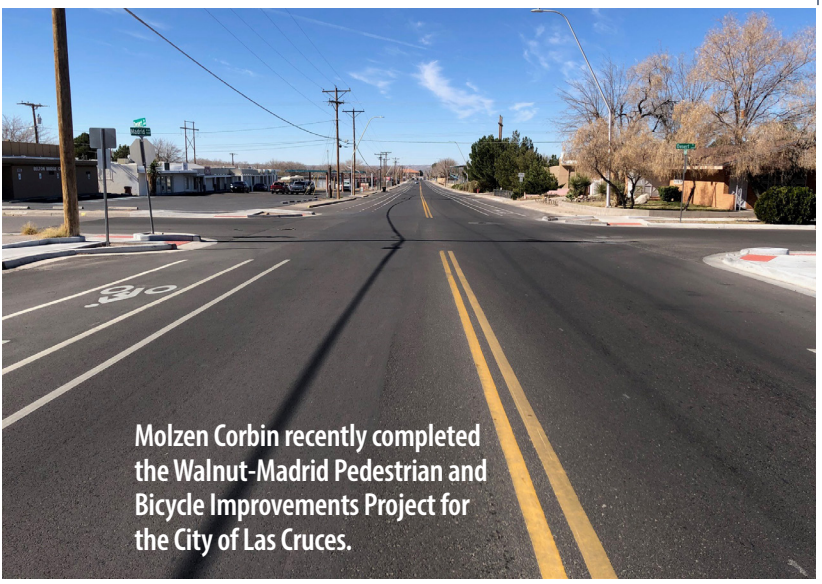
Amanda Lara, EI: Civil/Roadway

B.S., Civil Engineering, NMSU | Years of Experience: 5 | Time Assigned: 20%

Ms. Lara is an engineering intern with 5 years of professional experience with Molzen Corbin. Since joining Molzen Corbin, she has assisted in the design of numerous roadway, water, and wastewater projects. While pursuing her Civil Engineering degree at NMSU, she worked as an Engineering Coop for the City of Las Cruces Utilities Department. She assisted the Utilities Department with project management documentation, reports, and correspondence. She is proficient in AutoCAD and Civil 3D.

Relevant Experience: Bowman Street Reconstruction and Water Line Improvements, City of Las Cruces; Mesilla Calle del Norte and La Llorona Trail Project, City of Las Cruces; Calle de Parian Reconstruction Project, Town of Mesilla; Mesilla Roadway Improvements, Town of Mesilla; and I-25/University Interchange, NMDOT.

Areas of Competence: Construction Management, Roadway Design, Utility Design and Coordination, and Computer Network Analysis



Molzen Corbin recently completed the Walnut-Madrid Pedestrian and Bicycle Improvements Project for the City of Las Cruces.

Andrew Wong, PE: Drainage/Site Development

NM PE #25643 | B.S., Civil Engineering, NMSU | Years of Experience: 9 | Time Assigned: 20%

Mr. Wong is a professional engineer with 9 years of experience. He is a vital member of Molzen Corbin's Transportation Team supporting several key NMDOT projects from the Las Cruces Office, including the I-25/University Interchange and US 285 projects. Mr. Wong also has direct experience in the areas of hydrologic analysis, hydraulic analysis, scour analysis, traffic capacity, traffic safety, water distribution systems, and wastewater collection systems. He most recently provided drainage design services for the NMDOT's I-25/Williamsburg Interchange Improvements Project.

Relevant Experience: Arrowhead Interchange Study, NMDOT; West Mesa Corridor Phase A/B Study, NMDOT; and US 285 Roadway, NMDOT.

Areas of Competence: Drainage, Roadway, and Utility Design

Greg De La Torre: Drainage/Site Development

NM PE #25643 | A.A.S., Computer-Aided Design, NMSU | Years of Experience: 27 | Time Assigned: 20%

Mr. De La Torre has 28 years of experience working with AutoCAD software, Civil 3D, Plant 3D, Infraworks, Inroads and MicroStation, Sketchup, Google Earth, and ArcGis Desktop. He is very familiar with NMDOT Design Standards. He has worked on numerous O&M manuals for wastewater treatment facilities. His roadway experience within the City includes the Lohman Avenue Reconstruction, Reynolds Drive Reconstruction, and Harrelson Street Reconstruction.

Relevant Experience: Valley Drive, NMDOT; Mesilla Plaza Improvements, Town of Mesilla; and Calle Principal Reconstruction, Town of Mesilla.

Areas of Competence: Drainage, Roadway, and Stormwater Design

Ken Muller, PE: Utilities

NM PE #12548 | B.S., Civil Engineering, California Polytechnic Institute | Years of Experience: 53 | Time Assigned: 15%

Mr. Muller has 53 years of experience planning and designing water and wastewater facilities from small to large. His water projects include designing raw and finished water transmission lines, pressure-reducing stations, booster pump stations, storage, and systems to remove organics; and writing water system preliminary engineering reports (PERs). Mr. Muller also performs in-house quality control reviews of many Water Resources pre-final contract documents, as well as maintains Molzen Corbin's standard Water Resources specifications.

Relevant Experience: 4,000,000-Gallon Finished Water Tank for Buckman WTP, City of Santa Fe; Canoncito-Eldorado Finished Water Transmission, Pumping, and Storage, Santa Fe County; Hondo 2 Pump Station Fire Storage Tank, Santa Fe County; and Raw Water Transmission, Double Eagle Waterline, City of Carlsbad.

Areas of Competence: Water Treatment, Wastewater Treatment, and Value Engineering

Clayton Ten Eyck, PE: Utilities

NM PE #18866 | M.S., Environmental Engineering, Utah University, B.S., Civil Engineering, Northern Arizona University | Years of Experience: 19 | Time Assigned: 15%

Mr. Ten Eyck, MS, PE, has 18 years of experience in water and wastewater engineering, including designing wastewater treatment, collection, and effluent reuse improvements for several municipalities, tribes, utilities, and water and sanitation associations. At Molzen Corbin, Mr. Ten Eyck has managed several multi-discipline water and wastewater treatment plant projects.

Relevant Experience: Primary Digester No. 1 Hot Water Leak Repair, City of Las Cruces; Jacob Hands WWTF Roughing Filter Improvements, City of Las Cruces; Reverse Osmosis Water Treatment System, AWSD; Wells No. 1 and No. 4 and Water System Improvements, AWSD; and NM 314 Sewer System, City of Belén.

Areas of Competence: Water Treatment, Wastewater Treatment, and Municipal Infrastructure

John Pate, RA, RLA: Parks/Athletic Fields/Buildings

NM RA #1784, NM RLA #87 | B.A., Architecture, UNM | Years of Experience: 48 | Time Assigned: 10%

Mr. Pate has 48 years of experience in master planning and designing architectural and landscape projects. As a project manager, Mr. Pate's experience with diverse construction methods and materials enables him to provide meaningful direction to multi-disciplined teams. His approach to design balances function and aesthetics with a focus on cost savings, labor-saving building techniques, and the efficient use of materials. Due to his decades of experience working with municipal, State, and Federal clients, Mr. Pate has a strong sensitivity for producing projects within inflexible budget and time constraints. His project experience includes architectural design support for wastewater treatment facilities, lift stations, well houses, booster stations, and tanks; recreational facilities; municipal buildings and parks. He recently completed the landscape architecture for the I-25/University Interchange. As a landscape architect, Mr. Pate has worked extensively in all facets of site, neighborhood, and park development and landscape design.

Relevant Experience: Community Center, Phase I–III, Town of Mesilla; Mesilla Plaza Kiosko, Town of Mesilla; and Memorial Stadium Presidential Skybox, NMSU.

Areas of Competence: Architecture, Landscape Architecture, and Parks and Recreation Facilities

Kent Freier, PE, CFM: Airport Facilities/ Expert Witness

NM PE #8182 | B.S., Civil Engineering, Texas Tech University | Years of Experience: 46 | Time Assigned: 15%

Mr. Freier has more than 46 years of experience. Formerly the manager of our Las Cruces branch office, he has a strong familiarity with the City of Las Cruces and the City's design issues. His project experience includes the management, planning, and design of civil engineering projects, including site grading and drainage, utilities, roadways, park facilities, and subdivisions. Mr. Freier's major road and highway experience ranges from traffic studies, arterial roadways, rural highways, and utilities to completing traffic control plans and roadway alignment studies. Further, he has more than 35 years of airport design experience and is one of the recognized leaders in airport engineering in New Mexico.

Relevant Experience: Terminal Apron Reconstruction, Las Cruces International Airport (LRU); Drainage Master Plan, LRU; Runway 4-22 Reconstruction, LRU; Archuleta Road/Hadley Avenue Roadway Improvements, City of Las Cruces; and Picacho Avenue/Spruce Avenue Realignment, City of Las Cruces.

Areas of Competence: Traffic Impact Studies and Traffic Modeling and Expert Witness

Principal Officer

Mr. Kevin Eades, PE (NM PE #14481), President and Chief Executive Officer, is the principal member/officer of the firm who will be responsible for administration of this contract.

2701 Miles Road SE
Albuquerque, New Mexico 87106
(505) 242-5700/FAX (505) 242-0673
keades@molzencorbin.com

Subconsultants

Our full list of proposed subconsultants is provided in Figure 8 (below).

Work Performance Location

Molzen Corbin has maintained an office in Las Cruces for nearly 40 years. We offer full-service capabilities that have proven to be highly responsive to the City. At the same time, we are able to draw on our Albuquerque office for additional depth of staff when required.

Mr. Montoya, PE, will manage this project from Molzen Corbin's Las Cruces office at 1155 Commerce Drive, Suite F. Based on our past performance on similar projects, we estimate that 90% of the work for the City on this project will be completed in our Las Cruces office, with the remaining 10% completed in our Albuquerque office at 2701 Miles Road, SE.

Professional Responsible for Work

As Project Manager, Mr. John Montoya, PE (NM PE #12423), Vice President, is the principal member/officer of the firm who will also be in direct responsible charge of the work.

1155 Commerce Drive, Suite F
Las Cruces, New Mexico 88011
(575) 522-0049/FAX (575) 522-7884
jmontoya@molzencorbin.com

Figure 8. Molzen Corbin has cultivated decades long relationships with our trusted subconsultants.

Team/Responsibility	Experience & Areas of Competence
Cobb, Fendley & Associates: Subsurface Utility Engineering 5541 Midway Park Place NE, Albuquerque, NM 87109, (505) 508-0786 Contact: Freddie Jaramillo Typical Percent of Time: 5%	Cobb Fendley is a multi-disciplined firm providing SUE, Utility Coordination and Design, Surveying and Mapping, Right-of-Way Acquisition, and Telecommunications Services. Mr. Jaramillo has 11 years of experience in locating utilities. He has worked on projects using as-builts, utility records, and visible features to designate utilities using various locating equipment, such as an RD-8100, GPR, Metrotech 810, and a GEO mapper. **Project Experience:** Browns Farm, City of Las Cruces; University Drive, City of Las Cruces; Veterans Park, City of Las Cruces; and Cortez Drive, City of Las Cruces.

3. Performance of the Firm with Previous Clients

Valley Drive (Las Cruces), NMDOT

Constructed in the 1950s, Valley Drive (NM 188) is one of the major north/south corridors through the City of Las Cruces. As the City has urbanized over the past 25 years, Valley Drive has seen its importance to the community grow as well, including its designation as a major bicycle route in the region. However, the existing roadway was largely rural and dated, requiring capacity, access management, drainage, and utility improvements. Many current design standards were not being met, particularly with regard to bicycle and pedestrian access and safety. Compounding these issues was the fact that this section of Valley Drive was home to more than 70 businesses, making public awareness, participation, and coordination the chief challenge to successful project completion.

The Molzen Corbin project team successfully addressed project challenges and transformed Valley Drive into a modern urban corridor in the heart of the City of Las Cruces that will make traveling safer and more efficient for decades to come.

Unique aspects of this project include:

- **Multi-Modal Improvements:** Buffered bicycle lanes and sidewalks were added to the redesigned roadway, as well as the City's first "Bike Box." Access control and traffic calming measures were also incorporated to promote multi-modal use and improve safety. The entire Valley Drive corridor was finished with landscaping and irrigation.
- **Utility Upgrades:** Transforming the rural roadway into a modern corridor meant designing a completely new storm drain system that included the capacity for future expansion. In addition, water, sanitary sewer, and gas systems were all replaced.
- **Unique Public Involvement/Awareness Campaign:** With more than 70 businesses along this corridor, Molzen Corbin took a unique approach to increase public awareness by implementing virtual public meetings. In addition to providing for in-person attendance, meetings were streamed live on social media and broadcast to a local television channel, allowing for increased public awareness and input.

Contact: Mr. Arthur Romero, PE, Project Development Engineer, (575) 202-3340

Bowman Avenue, Town of Mesilla

Bowman Avenue servers as a collector street through a mix of land uses: farming and residential. Molzen Corbin was contracted by the Town of Mesilla to complete the survey (topographic and ROW) and roadway design, including a complete roadway replacement through the area. Upon coordinating with local entities, Molzen Corbin was contracted by the City of Las Cruces to design a replacement waterline, which was beneath Bowman Avenue to be bid with the roadway bidding documents.

The existing condition of the road was poor with drainage issues from beginning to end. The project began at University Avenue (NM 101) and terminated at Manso Avenue.

The waterline was designed parallel to the existing asbestos cement pipe with connection to the side streets, while keeping the existing utilities in service.

Valley Drive, Las Cruces

The waterline was designed and phased so that the sections of the waterline could be connected late at night, limiting the disturbance to water service.

The roadway design consisted of a rural asphalt roadway section including driveway pads that matched the existing driveway material. The vertical roadway profile was designed to be elevated in areas adjacent to the farmland to preserve the roadway from the farmland irrigation. Our design also consisted of linear ponds throughout to accommodate roadway drainage. Bidding documents allowed for additive alternates to be incorporated within the bidding documents maximizing the use of the available funding.

Bowman Avenue

The original design preserved the existing irrigation culvert on the north end of the project, but during construction it was obvious that the culvert was failing. The Town of Mesilla opted to replace the culvert to avoid any issues in the future.

Molzen Corbin provided a design for the culvert including headwalls and connection to existing ends, which was coordinated with Elephant Butte Irrigation District and the contractor. Molzen Corbin provided limited construction phase service to assist the Town of Mesilla in coordinating with the contractor, City of Las Cruces, and the funding agency. The project has been completed pending the final change order, which will be issued to balance the bid items. The project was successfully completed on time and within the budget.

Contact: Mr. Rod McGillivray (Former Public Works Director for the Town of Mesilla), Construction Project Manager, Spaceport America, (575) 267-8531, (575) 640-1988 (Cell)

Waterline Extension and Rio Grande Crossing, AWSD

Molzen Corbin completed the Waterline Extension Project for the Anthony Water and Sanitation District (AWSD) in March 2019 to provide potable water for an area of Doña Ana County that was being served by both an aging, inadequate water system and wells that had gone dry. Many residents had resorted to hauling potable water to their homes. The challenge in bringing water to this area of the county was crossing the Rio Grande River.

The Molzen Corbin team installed nearly 2.5 miles of PVC waterline for this project: 9,480 linear feet of 14-inch waterline and 1,180 linear feet of 6-inch waterline. To cross under the river, the team employed a horizontal directional drill of approximately 895 linear feet of fusible PVC waterline. Ultimately, the water service was extended to not only Gadsden High School, but to 30 residential customers and included five hydrants and connections for future growth.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Miller Engineers, Inc. dba Souder, Miller & Associates, of 3500 Sedona Hills Parkway, Las Cruces, NM, 88011, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Miller Engineers, Inc. dba Souder, Miller & Associates 3500 Sedona Hills Parkway Las Cruces, NM 88011 ATTENTION: Paul J. Pompeo

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

RE: SUBMITTAL OF PROPOSAL FOR CITY OF LAS CRUCES, "CIVIL ENGINEERING SERVICES", RFP NO. 23-24-050

Dear Members of the Selection Committee:

The following proposal is in response to the City of Las Cruces RFP No. 23-24-050 entitled "Civil Engineering Services." Miller Engineers, Inc. d/b/a Souder, Miller & Associates (SMA) has prepared this response in strict accordance with the written RFP issued by the City. SMA has received Addenda Nos. 1 & 2.

SMA has reviewed the RFP and is familiar with the City's policies, procedures, and conditions, ***having provided consulting services on numerous projects for the City using local staff for more than 29 years. SMA has provided on-call and standalone consulting services directly to the City on current and past contracts, and as a subconsultant to other firms for City projects. These include recent and ongoing projects, such as the NASA Road High Pressure Gas Line Replacement Project, the Zone 1 Interconnect Phase B Project 2, the Telshor and Lohman Storm Drain Repair Project, and the RoadRUNNER Transit Operations & Maintenance Facility.***

SMA has over 175 employees ***(more than 45 based in Las Cruces)***, including more than 35 registered professional engineers ***(seven in Las Cruces)***, registered professional surveyors and geologists, construction observers, and certified water and wastewater system operators ***in-house*** and has completed hundreds of infrastructure improvements projects, many of these with time limited completion schedules to meet funding deadlines. ***Several of SMA's project team members have developed a close working relationship with City staff members, based on clear communication and attention to the City's needs and wishes.*** Our proposed project team is prepared to move forward immediately when given notice to proceed.

Our local Las Cruces office, where all project management and field work will be performed for the City's projects, has served southern New Mexico for nearly 30 years, providing a stable and dependable foundation on which our valued clients can rely. This stability and continuity have allowed SMA to provide the highest-quality services to successfully complete each project while meeting and exceeding our clients' expectations. Our data gathering and design process focuses on client involvement, allowing the attention to detail afforded by a small firm and the depth of experience and resources of a large firm. We also have very good channels of communication with the different agencies of the State of New Mexico and Doña Ana County, which will prove instrumental for timely completion of projects under this contract.

On behalf of the entire SMA project team, we look forward to continuing our valued relationship with the City of Las Cruces and appreciate your consideration of our proposal. If you have any questions about this proposal or would like to meet at your convenience to discuss this project, please feel free to contact the undersigned via the email or phone number provided below.

Sincerely,

MILLER ENGINEERS, INC. D/B/A

Company Introduction

Miller Engineers, Inc. d/b/a Souder, Miller & Associates (SMA) appreciates this opportunity to propose to the City of Las Cruces (City) to provide Civil Engineering Services as described in the City's RFP No. 23-24-050. ***The SMA project team is structured to provide the City with the highest quality services using experienced professionals all coordinated from SMA's nearby Las Cruces office with more than 45 local staff members.***

SMA is an incorporated, New Mexico-based, employee-owned engineering, environmental and surveying consulting firm serving clients throughout New Mexico and the entire Mountain West region. Our project team emphasizes close working relationships and frequent interaction, allowing us to provide the highest quality product tailored to our client's needs while closely managing project costs and timelines.

The SMA Las Cruces office was established in 1995 to serve southern New Mexico. Since then, this office has grown to more than 45 employees, making it one of the largest engineering/ environmental consulting offices in southern New Mexico.

With more than 1175 employees, SMA offers comprehensive professional services including planning facilitation, asset management, preliminary and final project design (including any necessary environmental support, surveying, and right-of-way acquisition), regulatory plan reviews, bid administration, permitting, construction administration, construction observation, and support services, including grant administration and funding applications.

SMA has successfully completed similar on-call and standalone civil engineering design work with numerous municipal clients on projects throughout the state, including the City of Las Cruces. Our project team members are well-versed in the requirements of various regulatory agencies anticipated to be involved, including the City of Las Cruces, Doña Ana County, and the different agencies of the State of New Mexico.

SMA will provide all project management; engineering planning, analysis, and design; environmental documentation; expert witness services; and construction observation services in-house. In order to provide the highest quality services and technical diversity to the City of Las Cruces, SMA has enhanced its project team with CobbFendley for Subsurface Utility Engineering (SUE) services, Bath Group, Inc. (Bath) for supplemental computer network analysis, DCE Environmental, Inc. (DCE) for supplemental environmental investigation services, and Delta Airport Consultants, Inc. (Delta) for airport facility design. SMA has regularly teamed with each of these firms on several projects over the past 25+ years to complement each firm's strengths.

Technical Approach for Work to be Performed

While there are no specific projects listed in the City of Las Cruces RFP, SMA understands the City's ongoing needs for infrastructure improvements within each of the listed services by virtue of prior City-assigned projects. SMA has reviewed the RFP, and our project team members have met with City staff to discuss the current and long-term needs of the community. The following information outlines SMA's approach to each project.

While SMA has a successful project completion track record, we strive for continuous improvement. As part of that effort, SMA's project manager prepares a Project Management Plan (PMP) to guide the project execution and control and to document the team's approach to communicating with the client and managing risk. To ensure a solid company performance on the project, weekly operations meetings provide project managers the opportunity to present information to senior staff regarding project performance; scope; client needs; and resource availability. In addition, project managers schedule periodic meetings with each of the task managers to verify that assignments are being completed on schedule. Ultimately, the project manager communicates the progress of the project to the client and stakeholders.

Project Kick-off Meeting
For each new task order, SMA conducts internal kick-off meetings to coordinate and begin work on project-specific processes. The purpose of the kick-off meeting is to define the following:

Project-specific goals	Schedule of client progress reports and design reviews	Major design milestones
Schedule of internal design reviews to meet milestones	Timelines and budgets	Critical path issues that will control the schedule

Coordination and Status Review Meetings
The SMA team believes that regular communication and feedback are critical for success. During the contract period, SMA conducts regular meetings with and provides written updates to the City regarding the progress of the project. Whether formal or informal, SMA reviews the work product, cost estimates and project schedule with the City to ensure that the project goals are being met. Finally, SMA keeps in regular contact with regulatory and funding agencies, as well as contractors and sub-contractors. Working closely with the City to incorporate feedback and ideas enhances the quality of work.

Quality Assurance/Quality Control (QA/QC)
SMA places a high value on producing quality products, which we accomplish by following our QA/QC program that focuses on staff training and management involvement to ensure that all technical, scheduling, and budgetary requirements are met. Each project is initiated with a startup meeting where responsibilities for all staff members involved are clearly defined. During the life of the project, regular progress review meetings are conducted between all project staff to maintain the designated schedule, highlight any changes in scope, and identify and correct any delays or problems. A key value provided by SMA is data and report validation, which we accomplish through independent review of final reports by senior and project level staff other than the author.

2. Qualifications/Competence

SMA has identified a specialized planning and design team that includes several local professional engineers to work with the City. While all of the company resources, including more than 35 New Mexico registered professional engineers statewide, are at the disposal of the City, the table on the following page outlines the primary responsibilities of key members, ***all of whom have provided similar services for municipalities throughout southern New Mexico, including current and past projects for the City of Las Cruces.*** Resumes for primary Senior team members in charge of direct project management follow the table.

Service	SMA Key Personnel or Subconsultant	Location
Storm Drain Design	Paul Pompeo, P.E.	Las Cruces
Utility Design	Marty Howell, P.E. Paul Pompeo, P.E.	Las Cruces Las Cruces
Site Development	Paul Pompeo, P.E.	Las Cruces
Transportation Facility Design	Matt Nighbert, P.E.	Albuquerque
Environmental Investigation	Niki Harings, Ph.D. DCE *(Subconsultant as needed)*	Las Cruces Albuquerque
Subsurface Utility Exploration	CobbFendley *(Subconsultant as needed)*	Las Cruces
Construction Contract Administration	Michael Johnson, P.E.	Las Cruces
Airport Facility Design	Delta *(Subconsultant as needed)*	Albuquerque
Surveying	Darryl Coster, P.S. Lance Foster, S.I.	Las Cruces Las Cruces

Service		SMA Key Personnel or Subconsultant	Location
Drainage Reports / FEMA Flood Studies		Paul Pompeo, P.E.	Las Cruces
Expert Witness Services		All Task Leads as applicable	TBD
Project Management		All Task Leads as applicable	TBD
Construction Inspection		Richard Bustos	Las Cruces
Computer Network Analysis	Water	Robert Storey, P.E.	Las Cruces
	Wastewater	Robert Storey, P.E.	Las Cruces
	Gas	Bath *(Subconsultant as needed)*	El Paso, TX

Key Personnel - Experience and Expertise

The following bios outline the experience, professional designations, areas of special expertise and areas of competence for each of SMA's key team members. Our Project Manager and primary Task Leads are based in (and residents of) Las Cruces ***and collectively represent well over 200 years of specific engineering experience in Las Cruces.*** For space considerations, this listing only includes Senior level personnel in charge of management for the project services. Additional information on all listed staff, including full resumes, is available on request.

Percent of Time Assigned to the Project: Up to 20%

Paul J. Pompeo, P.E. | Principal-in-Charge / Task Lead - Storm Drain Design, Site Development, Drainage Reports/FEMA Flood Studies

B.S. - Civil Engineering
Professional Engineer - New Mexico (#11490)

Areas of Expertise and Competence

Storm Drainage, Utilities, Site Development, Drainage Reports/FEMA Flood Studies, Expert Witness, Project Management

Responsibilities and Experience

Mr. Pompeo has more than 30 years of experience as a Professional Civil Engineer with an emphasis in public works, residential, commercial, and industrial project design and development. His project experience includes total project oversight from the conceptual phases through final construction inspection. Designs have included grading plans, roadway plan & profile design, drainage plans, utility plans, geotechnical investigations, pavement design and project specifications. Following the design phase, Mr. Pompeo oversees the submittal of project documents to jurisdictional governmental agencies and private utility companies for review, approval and permitting.

Representative Past Projects

- City of Las Cruces NASA Road High-Pressure Gas Line
- City of Las Cruces Smith Ave and La Fonda Ave ADA Upgrades
- City of Las Cruces Nevada Ave Green Infrastructure
- City of Las Cruces Parking Lot 7 & Restroom Building
- City of Las Cruces Telshor & Lohman Storm Drain Repair
- City of Las Cruces Walking, Jogging, Biking, and Recreational Trails
- City of Las Cruces Design-Build Parks and Sports Courts Rehabilitation
- City of Las Cruces Design-Build Recreational Trails
- Alamogordo-White Sands Regional Airport Neptune Hangar Apron Reconstruction Design
- Sonoma Ranch Master Plan Communities
- Sierra Norte Master Plan Community
- Three Crosses Regional Hospital & MOB Development
- Town of Mesilla La Llorona Multi-Use Trail Extension
- Doña Ana Walking Path
- Doña Ana County La Union Sidewalk
- Doña Ana Sidewalks and Lighting

Stronger Communities by Design®

Percent of Time Assigned to the Project: Up to 15%

Marty Howell, P.E. | Senior Engineer / Task Lead – Utility Design

B.S. - Civil/Environmental Engineering
Professional Engineer - New Mexico (#22670), Arizona, Colorado, North Dakota, Texas

Areas of Expertise and Competence
Utility System Planning & Design, Expert Witness, Project Management

Responsibilities and Experience
Mr. Howell is a Senior Engineer at SMA with more than 30 years of experience in engineering planning and design. His project experience spans a broad range of technical disciplines, providing design and management on water, wastewater, landfill, and roadway projects. Before joining SMA, Mr. Howell was the Director of Economic Development and Sustainability for the City of El Paso, TX, and prior to that was the Water Resources Operations Manager for the City of Greeley, CO. His past project experience includes design and construction of water storage, distribution, and treatment improvements; wastewater collection, treatment, and reuse; utility master planning; feasibility studies and planning for new water and wastewater system projects. Mr. Howell has worked extensively with municipalities and utility systems throughout southern New Mexico, ***including recent infrastructure improvements for City of Las Cruces.***

Representative Past Projects

- City of Las Cruces Hacienda Acres Phases 1 & 2 Sewer System Improvements
- City of Las Cruces Mesa Development Water Improvements
- City of Las Cruces Zone 1 Interconnect Phase B Project 2
- City of Las Cruces Missouri Tank Rehabilitation
- City of Carlsbad Engineering On-Call
- Village of Ruidoso Multiple Water, Wastewater, and Roadway Improvements
- Lower Rio Grande PWWA On-Call Engineering and Multiple Water & Wastewater System Improvements
- Garfield MDWC & MSWA Multiple Water System Improvements
- Town of Mesilla McDowell Road Wastewater Collection Phases 1 & 2

Percent of Time Assigned to the Project: Up to 15%

Matt Nighbert, P.E. | Senior Engineer / Task Lead – Transportation Facility Design

B.S. - Civil Engineering
Professional Engineer - New Mexico (#19479)

Areas of Expertise and Competence
Transportation Facility Planning & Design, Expert Witness, Project Management

Responsibilities and Experience
Mr. Nighbert's responsibilities as Senior Engineer and Transportation Technical Sector Director include coordinating the preparation of plan sets from project initiation to completion. Project-specific tasks include facilitating the geometric design of roadways and roadway sub-elements, verifying that existing environment elements are accounted for in the designs, coordinating the efforts of sub-consultants and incorporating subconsultant data into plan sets or client deliverables, and making certain of the completion of engineer's opinions of construction cost. Technical consultation tasks include relating project requirements and project types to the best methods to accomplish project designs.

Representative Past Projects

- City of Albuquerque Bikeways and Trails Master Plan Update
- Town of Mesilla La Llorona Multi-Use Trail Extension
- NMDOT Statewide On-Call Contracts – Multiple
- City of Hobbs West Bender Roadway & Drainage
- Bernalillo County On-Call Traffic and Transportation Multiple Contracts
- Grant County Road Certifications
- NMDOT NM 15 Silver City Phase III Reconstruction
- Mescalero Apache Tribe Inn of the Mountain Gods Bridge Replacement

Percent of Time Assigned to the Project: Up to 20%

Michael Johnson, P.E., ENV-SP | Senior Engineer / Task Lead – Construction Contract Administration

M.B.A. – Business Administration; B.S. – Civil Engineering
Professional Engineer – New Mexico (#10751)
Environmental Sustainability Professional (ENV-SP)

Areas of Expertise and Competence
Storm Drain Design, Site Development, Construction Contract Administration, Construction Inspection, Project Management

Responsibilities and Experience
Mr. Johnson was a former Public Works Director, Facilities Director, and City Traffic Engineer for the City of Las Cruces and has more than 35 years of public works operational, engineering design, and managerial experience. He has extensive engineering experience working with municipalities, counties, and state and federal agencies. In addition to engineering design and management, Mr. Johnson has substantial in-field construction observation experience on a variety of infrastructure improvements projects, providing him with first-hand knowledge of both sides of project work. This experience affords him a unique insight to project logistics. From his time with the City of Las Cruces, Mr. Johnson has an intimate knowledge of the design and construction of much of the City's existing infrastructure. Since joining SMA, he has provided professional consulting services for numerous projects in and around Las Cruces, including several infrastructure improvement projects for City of Las Cruces, as noted below.

Representative Past Projects

- City of Las Cruces NASA Road High-Pressure Gas Line
- City of Las Cruces Nevada Ave Green Infrastructure
- City of Las Cruces Parking Lot 7 & Restroom Building
- City of Las Cruces Walking, Jogging, Biking, and Recreational Trails
- City of Las Cruces Design-Build Recreational Trails
- Three Crosses Regional Hospital & MOB Development
- Doña Ana County La Union Sidewalk
- Doña Ana Sidewalks and Lighting

Percent of Time Assigned to the Project: Up to 20%

Niki Harings, Ph.D. | Senior Environmental Scientist / Task Lead – Environmental Investigation

Ph.D. – Biology; M.S. – Biology; B.S. – Biology

Areas of Expertise and Competence
Environmental Investigation, Expert Witness, Project Management

Responsibilities and Experience
Dr. Harings is a Senior Environmental Scientist with 21 years of experience - 13 directly with SMA producing NEPA documents for a variety of agencies, including Federal, State, local, and tribal clients. She has managed and or participated in NEPA projects including solar farms, institutional facilities, dams and other water retention structures, linear transmission facilities, roadways, and conveyance channel projects. Dr. Harings has completed CatExs and EAs for both new and old construction. Dr. Harings will use her extensive NEPA experience in the development of any environmental services that may be required for the City's projects, ensuring all data collected is complete, concise, and correct, meeting the objective of providing sufficient information for environmental assessments to meet regulatory compliance and funding requirements.

Representative Past Projects

- Doña Ana County Flood Commission La Union Cultural Resources Evaluation
- NM General Services Department Small Homes Environmental Assessment
- Dove Creek Raw Water Reservoir Improvements Environmental Investigations
- NM General Services Department Behavioral Health Institute Environmental Assessment
- Spaceport America Biological Report
- Mescalero Apache Tribe – Multiple Environmental Investigations

Stronger Communities by Design®

Percent of Time Assigned to the Project: Up to 20%

Robert Storey, P.E. | Project Engineer / Task Lead – Computer Network Analysis

B.S. - Civil Engineering (Math Minor)
Professional Engineer - New Mexico (#26569)

Areas of Expertise and Competence
Computer Network Analysis, Project Management, Utility Design

Responsibilities and Experience
As a Project Engineer with SMA, Mr. Storey's duties include utility system modeling, utility network analysis, and the development and review of construction drawings, technical specifications, and Opinion of Probable Construction Cost (OPCC) documentation for site development, water, wastewater, and natural gas infrastructure projects. He also assists in permitting and bid phase services for these projects.

Mr. Storey has worked as a research assistant at New Mexico State University, researching various water treatment methods. ***He has worked as a co-op at the City of Las Cruces Water Resources Department working with the City's water model, developed reports on the well production, water quality, and various other aspects of the City's water operations.*** He has also provided design support for structural, water, wastewater, and gas systems throughout southern New Mexico. Mr. Storey currently or has recently provided planning and design services for numerous utility system improvements projects in southern New Mexico.

Representative Past Projects

- City of Las Cruces Hacienda Acres Phase 2 Sewer System Improvements
- City of Las Cruces Mesa Development Water Improvements
- Town of Mesilla McDowell Road Wastewater Collection Phases 1 & 2
- Garfield MDWC & MSWA Multiple Water System Improvement
- City of Las Cruces NASA Road High-Pressure Gas Line
- City of Carlsbad Engineering On-Call
- Lower Rio Grande PWWA On-Call Engineering and Multiple Water & Wastewater System Improvements

Percent of Time Assigned to the Project: Up to 10%

Darryl Coster, P.S. | Principal Surveyor / Task Lead – Surveying

Professional Surveyor - New Mexico (#21204), Arizona, Colorado

Areas of Expertise and Competence
Boundary/Cadastral and Right-of-Way Surveys and Mapping, Subdivision Platting, American Land Title Association (ALTA) Surveys, Construction Staking, Expert Witness, Project Management

Responsibilities and Experience
Mr. Coster is SMA's Geomatics Technical Sector Director with over 35 years of surveying experience. He provides oversight for all of SMA's geomatics services, and relevant to the City's anticipated projects, he provides crew supervision and scheduling for SMA's southern New Mexico survey crews. Mr. Coster's other duties include performing calculations, plat preparation and surveying in the field on projects that include construction staking, control surveys, topographic surveys, right-of-way surveys, as-built surveys, boundary surveys, and aerial photogrammetric projects. Mr. Coster has provided Senior survey management for projects for a variety of clients throughout the state, including but not limited to ***City of Las Cruces***, Doña Ana County, Town of Mesilla, City of Alamogordo, Village of Ruidoso, Alto Lakes W&SD, Mescalero Apache Tribe, and Otero County.

Representative Past Projects

- City of Las Cruces Hacienda Acres Sewer Improvements Phases 1 & 2
- City of Las Cruces Zone 1 Interconnect Phase B Project 2
- City of Las Cruces Missouri Tank Rehabilitation
- City of Las Cruces NASA Road High-Pressure Gas Line
- Town of Mesilla McDowell Road Wastewater Collection Phases 1 & 2
- Lower Rio Grande PWWA Multiple Water & Wastewater System Improvements
- Garfield MDWC&MSWA Multiple Water System Improvements

Stronger Communities by Design®

Percent of Time Assigned to the Project: Up to 15%

Richard Bustos | Senior Resident Project Representative / Task Lead – Construction Inspection

A.S. - Water Technology

Areas of Expertise and Competence
Construction Administration, Construction Inspection, Project Management

Responsibilities and Experience
Mr. Bustos brings 30 years of experience in stormwater, water, wastewater, and roadway infrastructure projects. He is experienced in utility, drainage, subdivision, roadway, construction administration, project management, and development review. Prior to joining SMA, ***Mr. Bustos was the Senior Inspector for the Public Works Department of the City of Las Cruces.*** His area of specialty is the inspection of utility construction projects, during which he monitors for potential installation deficiencies, makes recommendations for cost savings to projects, and ensures proper submission of pay applications to maintain progress on each project.

Representative Past Projects

- Mescalero Apache Tribe Gallerito Water System Construction
- Village of Ruidoso Multiple Water, Sewer, and Roadway Improvements
- Doña Ana County Dragonfly Diversion Channel
- Lower Rio Grande PWWA Multiple Water & Wastewater System Improvements
- Garfield MDWC & MSWA Multiple Water System Improvements

3. Performance of the Firm

Similar Past Contracts

The nature of on-call contracts presents unique challenges due to the variability in type, schedule, and required effort of assigned tasks. To adequately meet the needs of the City of Las Cruces, a consultant must be responsive and have resources available at any time. Assigned tasks typically have short schedules, unique challenges, and tight fiscal budgets, requiring the most qualified personnel to meet these constraints. In order to successfully provide on-call services, the consultant must offer these key assets:

- Single point of contact for the client with a thorough understanding of task requirements
- Familiarity with the project area(s)
- Multi-discipline capabilities
- Qualified engineers and technicians
- Availability of staff
- In-place quality assurance/quality control measures programs
- In-place accounting systems to handle on-call tasks and accelerated schedules
- Experience with on-call service contracts

Specific project tasks associated with current on-call contracts with other municipalities, counties and state agencies include asset management plans, comprehensive plans, feasibility studies, roadway design, utility design & coordination, right-of-way maps, historical/cultural/biological reports, solid waste design and monitoring, sidewalk/bicycle path design, landscape design coordination, structural design, parking lot and driveway design and public information meetings, as well as surveying and stormwater drainage analysis and design.

The following is a small sampling of clients for whom SMA currently or has recently performed comparable on-call, multiple project engineering services:

- ***City of Las Cruces, NM***
- City of Deming
- Town of Mesilla
- Village of Corona
- City of Bloomfield
- City of Aztec,
- City of Farmington
- City of Artesia
- City of Sunland Park
- Grant County
- Doña Ana County
- Otero County
- San Juan County
- Sandoval County
- Pueblo of Isleta
- El Paso Electric Company
- New Mexico Department of Transportation

Stronger Communities by Design®

In addition to on-call engineering contracts, SMA has recently provided and/or is currently providing services similar to those described in the City's RFP through stand-alone contracts with a variety of New Mexico clients. Further projects are listed in Section 5 of this proposal.

Subcontractors

CobbFendley | Subsurface Utility Exploration

CobbFendley is a privately held consulting engineering firm providing civil engineering, SUE, and survey services since 1980. They currently operate a fully-staffed, local El Paso office established in 2015. CobbFendley's El Paso office has served a variety of local public clients, including but not limited to City of El Paso, El Paso County, El Paso Water, and El Paso Electric. CobbFendley will identify existing utility infrastructure by following the ASCE standard 38-02 that associates certain Quality Levels to depicted utilities. Initially beginning with record collection activities and field reconnaissance to identify above ground utility features, CobbFendley will prepare a comprehensive utility map along any proposed project areas. Their team has completed numerous other projects in Las Cruces, which will prove instrumental in records research for the City's anticipated projects.

Delta Airport Consultants, Inc. (Delta) | Airport Facility Design

Delta, an employee-owned company, was established in 1978 and practices exclusively in the airport industry. They possess a deep understanding of airport planning and engineering regulations and procedures and work regularly with the FAA and NMDOT. Delta specializes in aviation and provide a variety of airport development services, including Planning & Environmental, Business & Financial Planning, Program Management, Airport Engineering, and Construction Management.

Delta has more than 90 professionals located in nine offices across the country, including their Albuquerque location. In their 46 years, Delta has worked on thousands of projects for hundreds of clients, ranging from small, straight-forward efforts like pavement maintenance to complex, high-impact projects such as extensive runway rehabilitation, hangar developments, and fuel farm improvements. Delta's diverse and talented staff possesses a broad base of knowledge about the aviation industry. This comprehensive understanding of the challenges that face airports creates a unique perspective and allows us to provide a wide array of consulting services to our clients.

Bath Group, Inc. (Bath) | Supplemental Computer Network Analysis

Bath is a professional engineering firm with offices in several states. It provides engineering, commissioning, and process safety management services through its three divisions, Bath Engineering Corporation, Bath Commissioning Corporation, and Bath PSM. The firm was founded in 1957 and has grown to more than 50 employees with over 1,000 years of combined construction experience. The staff is very stable, with many employees having served the firm throughout their careers.

Bath takes pride in its dedication to sustainable design, having worked on dozens of buildings registered for LEED certification. Bath provides services to a wide range of clients including state and federal government, military, healthcare, higher education, municipal, and private commercial and industrial clients.

D.C. Environmental, Inc. (DCE) | Environmental

DCE was founded by Karen Dremann and David Charlesworth, whose 28-year career in the Southwest has been based on the principles of sound industrial hygiene and adult education. DCE is founded on the belief of scientific practice to recognize, evaluate, and control environmental hazards.

Their project involvement regarding environmental surveys and assessment includes interactive inspections and investigations, quality control and input from laboratories or design professionals, and cost-effective approach to remediation strategies. Mr. Charlesworth has performed a major part of his career overseeing hazardous materials remediation activities, air quality assessments and asbestos abatement.

Locations Where Work Will be Performed

With no specific projects established, fully accurate percentages of work to be performed are difficult to assess. The following percentages indicate our estimate for the percentage of work to be performed by SMA and our subcontractors by location.

SMA
Las Cruces - 90%
Albuquerque - 2%

Bath
El Paso - 2%

CobbFendley
El Paso - 2%

Delta
Albuquerque - 2%

DCE
Albuquerque - 2%

4. Management Structure and Approach to Project

Principal Officer Responsible for Administration of the Contract -and-

Professional Engineer Responsible for and in Direct Charge of the Work

Paul J. Pompeo, P.E. (NM PE #11490)
Vice President / General Civil Technical Sector Director / Principal Engineer
3500 Sedona Hills Parkway
Las Cruces, NM 88011
575.449.2836

Management Structure

Of the staff presented in Section 3, seven of our 10 task leads are based in (and residents of) Las Cruces and ***collectively represent well over 200 years of specific engineering experience in Las Cruces.*** Likewise, seven of the task leads each have more than 30 years of professional experience, and all task leads have more than 10 years of experience as a project manager and team leader; this represents a level of both professional experience and management acumen that is well beyond that of any firm with an office in Las Cruces.

More specifically, ***Mr. Pompeo has provided the requested services on projects in Las Cruces for more than 30 years.*** He has led teams for a variety of projects throughout New Mexico and surrounding states with constructed values exceeding several million dollars. Mr. Pompeo, as the Principal-in-Charge and Project Manager to the City, has an unparalleled local knowledge for site development and was the principal engineer and owner of Las Cruces-based Southwest Engineering for over a decade. Mr. Howell, as a Task Lead, has provided water resource project management throughout Doña Ana County ***(including projects directy for the City)*** as well as New Mexico and surrounding states, using a diverse team of professionals that he has mentored throughout a career extending more than 30 years. Mr. Johnson has been with SMA for nearly a decade and combined with his 27+ years at City of Las Cruces, he brings a broad depth of public works project management experience, as well as ***local experience working in Las Cruces for nearly four decades.***

Project Time Schedule

As the City has not identified any specific projects at this time, SMA cannot establish definitive schedules and rather can only subjectively discuss scheduling practice. As each project is determined, SMA will work closely with City staff to determine a practicable schedule that allows adequate time for data collection, design development, reviews (typically 30%, 60% and 90%), and final production.

SMA also understands that timelines frequently also depend on constraints such as fiscal year budgeting and funding sources. The diverse nature of services in this RFP scope means that corresponding timelines for delivery is also highly varied; Phase I ESAs may take only 10-15 business days to complete, while more complex services such as drainage studies may take more than one year to complete. Ultimately, all assigned tasks are entered into SMA's financial management software, allowing for tracking of anticipate completion dates by subtask and presenting all project participants with visual indicators of progress versus budget. Although some projects are delayed by circumstances outside of the control of SMA (e.g. agency review, weather, utility locates), we strive to maintain initial project schedules, including work beyond regular hours.

Operational/Management Approach

SMA's approach to the management of each project was previously outlined in Section 1. SMA is presently organized into five business lines (or disciplines): General Engineering, Environmental, Surveying, Water Resources, and Transportation, which have several sub-disciplines, such as stormwater management, solid waste, intelligent transportation, planning, and sUAV surveys. Each subdiscipline includes one or more subject matter experts and a tailored QA/QC path based on overall objectives.

All of the corporate support notwithstanding, SMA projects are all managed through local project managers who have direct contact with their clients. Each local project manager is typically backed by another project level employee, who is also local, providing secondary contact and flexibility in meeting with City staff.

Major Tasks to be Accomplished

SMA understands that this on-call contract will include projects of various sizes and types throughout the City. The first stage of any project is scoping, which may simply include information provided by the City in email or a more involved on-site pre-project meeting. The next stage will develop the workplan, which will include scope, fee, and timeline specifics for City-outlined tasks. Depending on the project scale, interim meetings may be held with City staff to discuss progress, changes in conditions, and any items that might alter the timeline for delivery.

As noted earlier, the size of the design project will dictate the number of review plans before the final plan set. These design packages may also include specification packages utilizing standard details provided by the City, or those developed by SMA in working with communities throughout the southwest. For planning phase projects, various staged deliverables may be submitted, while for investigative tasks typically only a final report is produced. Deliverables for resident project representative, by contrast, may range from daily written reports to summaries coordinated with contractor payment schedules.

During the course of all projects, billing is typically completed either on a monthly (for time and materials or percentage complete tasks) or a deliverable basis. Time and materials invoices will include a breakdown of all charges accumulated during the billing period. At the completion of each project, SMA will offer the opportunity for feedback from the City to identify areas of improvement, if any, for subsequent assignments.

Statement of Services

Services associated with projects under this on-call contract as outlined in the RFP may include, but are not limited to the following:

Transportation Facility Design

SMA has completed many substantial road and highway projects throughout New Mexico and surrounding states, including parking lot and driveway design for a variety of structures and commercial development sites. SMA provides data collection, design, stormwater calculations, environmental support, bidding, construction staking, construction observation, project management and development of as-constructed record diagrams. Clients have included the New Mexico Department of Transportation (NMDOT), counties, cities, towns, villages, tribes/pueblos, public schools, engineering consulting firms and private entities. Recent road design experience includes rural arterial and collector streets in difficult soil and topographic conditions, development/design of traffic circles, urban arterial and collector streets and signalized intersections of state highways.

Specific project tasks include feasibility studies, alignment alternative design, utility extension design/utility coordination, right-of-way maps, historical/cultural/biological reports, curb-and-gutter design, sidewalk/bicycle path design, landscape design coordination, structural design, parking lot and driveway design and public information meetings, as well as surveying and stormwater drainage analysis and design.

Water, Wastewater, and Natural Gas System Design and Analysis
SMA has been involved in pipeline-based infrastructure system improvements projects (including water, wastewater, and natural gas) for more than 30 years, and has performed work for municipalities, private clients and other public entities that covered a full range of services. SMA engineers have completed many NMED and United States Department of Agriculture (USDA) formatted preliminary PERs and associated EIDs, several of these with time limited completion schedules. Our staff will utilize GASWorkS, InfoWater, and InfoSewer software to complete each project for the City.

SMA assists many public and private entities in securing and maintaining reliable sources of high-quality drinking water and in the proper disposal of liquid wastes. Many of these projects need to be phased to reduce the financial burden associated with the improvements. The initial phase includes a site investigation, resulting in a preliminary engineering report of the water or wastewater system. This report contains specific information regarding the age of the existing system, the adequacy of the equipment, the required system capacities, and any ancillary data such as possible inflow/infiltration sources (for wastewater projects) or wellhead protection programs (for water projects). An estimated project cost is then developed, and possible funding sources are identified.

Environmental Surveys, Assessments, Monitoring, and Management
SMA provides ASTM Standard Phase I ESAs and ASTM Standard Transaction Screens to help clients assess environmental liability associated with a property. Phase II investigations are also conducted as required. Under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, liability for site cleanup as a result of a release of hazardous substances into the environment is assigned to the responsible party or landowner. To reduce the risk of such liability, a landowner, a potential landowner, or a loaning agency may choose to complete an environmental assessment to determine if a property has been contaminated.

Site Development (Drainage and Grading Design)
SMA performs drainage structure inspections to provide analysis and modeling to efficiently control stormwater drainage, analyzing the channel flow and modeling the backwater curve to effectively characterize the drainage basin. SMA provides designs to protect and control against erosion and floods and has used above ground channelization and below ground conveyance. SMA also provides development of Storm Water Pollution Prevention Plans (SWP3) and state mandated Sediment Control Plans, including the development of best management practices.

Drainage Infrastructure Design
SMA has developed state-of-the-art drainage analysis methods utilizing GIS, WMS and HEC-HMS. However, SMA has reduced the cost and time necessary to collect this data and develop the hydrologic model by using up-to-date GIS methods instead. With software, such as ArcGIS, combined HEC-GeoRAS & HMS, FLO-2D, and WMS, SMA now develops drainage basin maps and preliminary hydrologic and soil factors directly from GIS sources before the project has been surveyed.

SMA has a variety of methods available for performing drainage analyses, depending on the size and complexity of the project. Some of these methods include:

- USGS Regression Method
- HEC-DSS, HEC-RAS 5.0 and HEC-HMS
- FLO-2D Pro
- FlowMaster
- SSA (AutoCAD Civil 3D)
- StormCAD

Drainage Studies (including FEMA Flood Studies) and Stormwater Management
SMA's experience includes civil site design, watershed hydrology and yield studies, hydraulic analysis of natural and manmade water courses, GIS mapping and analysis, hydraulic structure design and structural engineering. SMA has several staff with training and background in desert stormwater management and floodplain evaluation. Combined with in-house surveying resources, SMA can develop large and small-scale floodplain management projects.

SMA staff members have completed LoMR and CLoMR projects throughout New Mexico to allow and otherwise improve development of parcels that border FEMA floodplains.

Surveying (Geomatics)
SMA has field crews and equipment resources to complete any surveying that may be required to complete the City's projects associated with this on-call contract. Surveying projects have included easement, boundary, and right-of-way surveys; annexation surveys; topographic mapping; ALTA surveys; photogrammetric mapping; route surveying for electrical lines; construction surveys; aerial drone and aerial control. We use advanced survey equipment and procedures, including both static and kinematic global positioning systems (GPS). Additionally, SMA utilizes multiple small unmanned aerial vehicles (sUAV aka "drone") with high-pixel cameras for site specific mapping applications.

Airport Facilities
SMA's project team, along with Bath, will provide SMA has provided professional consulting services for numerous airport facilities throughout the region. These services have spanned our entire catalog of services, including but not limited to civil engineering design, roadway planning and design, drainage planning and design and surveying services for design and construction.

Relevant projects have included:

- Alamogordo-White Sands Regional Airport Neptune Hangar Apron Reconstruction Design, Alamogordo, NM
- Apron and Taxiway Survey and Environmental, Cannon Air Force Base, NM
- Hangar Facility Survey, Holloman Air Force Base, NM
- Roswell Airport Runway 3-21 Survey, Roswell, NM
- Doña Ana County, Santa Teresa Airport Hangar Drainage Design, Santa Teresa, NM
- Doña Ana County, Santa Teresa Airport Hazardous Materials Center Drainage Design, Santa Teresa, NM
- Doña Ana County, Santa Teresa Airport Road NEPA Investigations, Santa Teresa, NM
- Helo Pad Construction Staking, Kirtland Air Force Base, NM
- City of Santa Fe, Airport Road Reconstruction and Landscaping Improvements, Santa Fe, NM
- Army National Guard Aviation Support Facility SWPPP, Belen, NM
- Williams Gateway Airport Taxiway and Apron Survey, Mesa, AZ

Our subconsultant, Delta, has assisted the City with over 10 projects at the Las Cruces International Airport (LRU). During this period, LRU received over $18,700,000 of federal funds. Combined with state and local funds, these grants have allowed LRU to maintain and upgrade airport facilities. Delta knows and understands the Airport, its stakeholders, and its challenges. Their institutional knowledge reduces unknowns and helps to mitigate risk. A sampling of the projects that Delta has worked on at LRU includes:

- ***Airport Action Plan***
- ***Update eALP***
- ***Rehabilitate Runway 12-30***
- ***Replace AWOS***
- ***Rehabilitate Taxiway A***
- ***Rehabilitate Fuel Farm***
- ***Install PAPIs Runway 8-26***
- ***Expand Electrical Vault***
- ***Rehabilitate MITLs (LED) on Taxiway B and C***

The upcoming capital improvement program at the Airport includes a variety of exciting projects that effectively redefine the Airport and its ability to serve the community. Delta's proposed Facility Manager, Ms. Cheryl Rodriguez, located in Las Cruces, will lead the Delta team, providing continuity, familiarity of the program, and historical context to the projects.

Subsurface Utility Exploration (SUE)
SMA's subconsultant, CobbFendley will provide any SUE services necessary to complete the City's projects to fulfill requirements of ASCE standards. These services may include simple data collection of visible features using GPS or similar authoritative data collection, additional electronic location techniques, or specialized equipment such as air knife physical excavation of discrete areas.

Monitoring and Managing Indoor Air Quality and Asbestos Investigations and Removal
SMA provides indoor air quality and asbestos monitoring and management services with the assistance of our subconsultant, DCE to provide comprehensive indoor air quality and industrial hygiene consulting services. SMA regularly samples indoor air quality and building materials that may affect indoor air quality (e.g. roofing, floor tile, acoustical tile, etc.) including asbestos lead and mold. SMA's hazardous materials management includes identifying and controlling on-site and on-the-job health hazards. We provide qualified personnel to test for the presence of such hazards, evaluate existing hazards, and design strategy by which these can be controlled or eliminated, implementing strategies to ensure OSHA compliance. DCE's Certified Industrial Hygienists (CIH) can provide human health risk assessments to include planning, hazard identification, dose-response, and exposure assessments, as well as risk characterization.

Computer Network Analysis
SMA's project team, along with Bath, will provide computer network analysis for the City's infrastructure systems, including but not limited to water, wastewater, and gas. Our team has considerable experience with a variety of systems and components, including I&C and SCADA systems. All work will be completed using GASWorkS, InfoWater, and InfoSewer to adhere to the City's systems.

Expert Witness Services
SMA has experience providing professional witness and deposition services in judicial and quasi-judicial settings for clients throughout the region for projects such as water rights, stormwater management and environmental contamination. Depending on the specific discipline, SMA can provide several local resources for a variety of engineering and environmental project types. In cases requiring substantial resources, SMA can extend into the full depth of staff and provide multiple experts in most specific areas of support required by our clients.

Project Management
SMA staff includes several members that hold PMP certifications, an industry-recognized standard of education and testing for project management. Many additional staff have attended specific classes in project management with various professional organizations such as the PSMJ and the Zweig Group, and internal training on aspects of project management (record keeping, financial management, invoicing, etc.) approximately every other month.

Construction Inspection
SMA has over 30 years of experience in construction observation for infrastructure improvements in New Mexico. With multiple construction observers, our resources allow for thorough monitoring of any size project, including multiple sites concurrently. Depending on active workloads at the time a project commences, SMA's primary Resident Project Representative for the City's projects will be Mr. Richard Bustos, who has provided construction observation services for numerous projects throughout the City.

SMA provides support services from the pre-construction meeting through the final walk-through. As required for each project and the project funding agency, SMA's observation personnel are OSHA safety trained and PPE equipped. Our construction observation staff prepares detailed daily reports that are available to the project engineer and client. SMA's project engineer monitors progress pay applications, information requests and issues review and approval of all project submittals. Upon project completion, SMA provides funding agency closeout documents, operation and maintenance manuals (if required), reconciliation of funding and construction payments, and engineering completion certifications.

5. Performance with Previous Clients

The following project descriptions provide a sampling of SMA's recent project experience similar to the scope of work described in the City's RFP.

NASA White Sands Test Facility – NASA Road and Drainage Improvements from U.S. 70 to Guard Gate, Doña Ana County, NM

Contact: Arturo Zavala, Branch Manager Operation and Design Branch, Jacobs Technology, Inc.; 575.525.7517; Arturozavala@nasa.gov

SMA prepared construction plans for the upgrade of NASA Road from U.S. 70 to approximately 500 feet north of the Forward Guard Gate. This stretch of road has approximately 31 drainage crossings (12 low water crossings and 19 culvert structures). The project included conceptual design, topographic survey, traffic volume study, geotechnical investigation, pavement design, hydrology analysis, drainage report, preliminary design, and final design for construction of the new road.

New Mexico State University – Geo Technical Investigation Various Buildings, Las Cruces, NM

Contact: Ashley Burkholder, AIA, Project Manager, NMSU Facilities and Services; 575.646.1927; Jasper7@nmsu.edu

SMA completed geotechnical investigations for several projects at New Mexico State University. This includes subsurface investigation, drilling operations, and laboratory testing of various facility expansions and new buildings on the NMSU campus. Geotechnical reports were completed detailing the soils found, recommended applicable earthwork options, and recommended design parameters for the foundation systems.

Projects have included:

- Agriculture Modernization Phase II Arena
- BioMedical Research Building Expansion
- New Mexico Department of Agriculture Building 643
- Feed Mill Facility
- Food Science Building

Doña Ana County – Tres Caballos Road Improvement Project, Doña Ana County, NM

Contact: Rene Molina, Engineer Supervisor, Doña Ana County Engineering Road Department; 575.525.6170; renem@donaanacounty.org

SMA prepared construction plans to construct Tres Caballos Road in Mesquite, NM. The project included the conceptual design, survey (boundary, topographic, legal descriptions), pavement design, right-of-way acquisition, NMDOT clearances, preliminary design, and final design for the construction of a 24-foot asphalt road.

Additional Relevant Projects

- City of Las Cruces On-Call Services – Multiple Contract Cycles, Las Cruces, NM
- City of Las Cruces Comprehensive Plan, Las Cruces, NM
- Doña Ana County On-Call Services – Multiple Contract Cycles, Doña Ana County, NM
- Southwest General Construction – Multiple Engineering and Design-Build Projects, Statewide, NM
- New Mexico State University - Engineering and Environmental Support Services, Las Cruces, NM
- El Paso Electric On-Call Consulting Services, El Paso, TX
- Lower Rio Grande PWWA Multiple Water and Wastewater Projects, Doña Ana County, NM
- Town of Mesilla La Llorona Multi-Use Trail Extension, Mesilla, NM
- Mescalero Apache Tribe Inn of the Mountain Gods Bridge Replacement, Mescalero, NM
- NM 209 Alignment Study and Design - N. Prince Street, Clovis, NM
- State of New Mexico General Services Division – N.M. State Police Building District 4 – Sanitary Sewer Connection Improvements Project, Las Cruces, NM

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Smith Engineering Company, of 201 N. Church St, Ste 200a, Las Cruces, NM, 88001, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Smith Engineering Company 201 N. Church St, Ste 200a Las Cruces, NM 88001 ATTENTION: Rebecca C. Fink

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

City Attorney

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

Re: City of Las Cruces | RFP 23-24-050 Civil Engineering Services

Dear Selection Committee:

We submit our proposal for civil engineering services to the City of Las Cruces, acknowledging receipt of Addenda 1-2. Smith Engineering Company, established in 1989, offers extensive expertise in municipal infrastructure, ready to enhance the City's services.

Our proposal, detailed herein, showcases our approach to complementing the City's civil engineering needs, emphasizing planning, project management, and quality assurance. Our team, including experienced professionals like Rusty Payne and Jared Lujan, brings proven capabilities in delivering complex projects.

Enclosed, you will find:

An overview of Smith Engineering, highlighting our services and core values.

1. RFP Compliance Declaration
2. Our technical approach contains a typical civil engineering project approach, scheduling, project management strategy, and quality assurance measures.
3. Key team member profiles, underscoring their roles and expertise.
4. References demonstrating our successful on-call collaborations.
5. Cost Proposal (Under a Separate Cover).

We are eager to discuss how we can contribute to the City's objectives and are ready to provide any additional information needed.

Thank you for considering our proposal.

Sincerely,

Smith Engineering Company

Rusty Payne

Rusty Payne, PE
Vice President/ Team Leader/ Project Manager
rustyp@smithengineering.pro

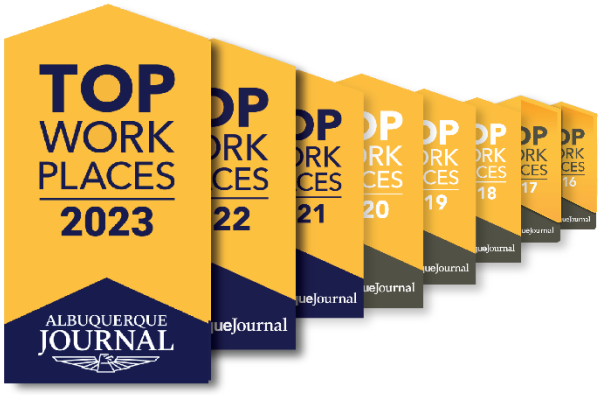
Introduction

Bob Smith and Karl Scheuch founded Smith-Scheuch Engineering Company in New Mexico, on October 1, 1989. They started by acquiring the Albuquerque office of Bovay Engineers from Houston, Texas. The company became Smith Engineering Company (Smith) in 1992 after Karl Scheuch left. In 1994, Smith merged with John D. Jaquess & Associates, expanding our service area to southern New Mexico and services including surveying, materials testing, along with civil and structural engineering.

Today, Smith operates offices in Albuquerque, Las Cruces, and Roswell, New Mexico. Our services have grown to encompass water resources engineering, construction services, and welding inspection. We are proud to have served esteemed clients like the City of Artesia, the Albuquerque Bernalillo County Water Utility Authority, Doña Ana Couty Flood Commission, and Xcel Energy, among others.

Smith is a C-Corporation and is employee-owned. We currently have 43 employees including two New Mexico licensed surveyors and ten New Mexico registered professional engineers.

Our company is built on the core values of Family, Service, and Integrity. We aim to serve our communities with high-quality, innovative, and value-driven engineering, working closely with both our staff and clients.



Technical Approach

The City of Las Cruces is tasked with the delivery and maintenance of a broad spectrum of municipal services, encompassing utilities, transportation infrastructure, drainage systems, recreational areas, sports facilities, and structural assets. Recognizing some limitations of their internal resources for civil engineering, the City seeks external expertise to augment their capabilities.

Smith Engineering brings a wide range of engineering services tailored for municipal infrastructure projects, including but not limited to, cost and timeline projections, detailed project designs and specifications, comprehensive project reporting, and specialized engineering consultations for transportation systems, drainage solutions, utility management, site development, investigative and feasibility studies, subsurface utility mapping, contract management for construction projects, land surveying tasks, drainage analyses, and FEMA flood studies. Our services extend to providing expert testimonies, project oversight, and on-site construction monitoring. Notably, subsurface utility explorations will be delegated to specialized subcontractors.

Our proposal acknowledges the potential for the City to engage multiple firms under a multi-source contract arrangement, typically referred to as "on-call" contracts. These contracts require the ability to manage a wide variety of projects with flexibility. Smith Engineering is well-prepared to fulfill such requirements, with anticipated engagements spanning:

- Strategic Planning
- Capital Improvement Initiatives
- Responsive Services for Immediate and Unforeseen Needs

Project Categorization

Strategic Planning Documentation

Smith Engineering possesses a wealth of experience in developing various planning documents essential for strategic development, potentially required under this contract. Our expertise includes, but is not limited to:

- Preliminary Engineering Analyses
- Infrastructure Asset Management Strategies
- Comprehensive and Sector-Specific Master Plans
- Environmental Impact Studies and Assessments (contracted out)
- Biological and Cultural Resource Evaluations (contracted out)
- Feasibility and Design Analysis Reports
- Hydraulic and Drainage Planning Models

Capital Enhancement Projects

This category encompasses projects identified within the client's Capital Improvement Plan and derived from strategic planning documents. Our role will involve the full spectrum of design and

pre-construction services, including detailed design documentation, cost estimation, utility coordination, bid support, and construction oversight. Our collaboration will extend to consulting with review and funding bodies to ensure compliance and facilitate project funding.

Responsive Services for Unforeseen Projects

Smith Engineering recognizes the need for swift action on projects that arise unexpectedly, requiring immediate attention outside the scope of planned capital improvements. Our approach is to evaluate the urgency and feasibility of these projects in the context of our current workload to ensure timely and effective delivery. Examples of our capabilities in this area include:

- Rapid design for construction of emergency repairs
- Compliance reviews against municipal standards
- On-site monitoring for infrastructure expansions
- Troubleshooting operational challenges
- Data management for municipal assets

Project Management Strategy

Strategic Planning and Conceptual Design

Our approach to planning and design is grounded in a comprehensive understanding of the project's objectives, scope, and constraints. This process begins with a Scoping Meeting to align on the project's goals and critical needs, followed by a Data Collection phase to inform our design solutions. Field assessments are integral to this phase, providing insights into potential challenges and opportunities.

Scoping Meeting: This initial meeting between Smith Engineering and the City is pivotal in defining the project scope, which in turn informs the project fee and schedule. The primary question, "Why does City of Las Cruces need this project?" sets the stage for a focused discussion on the project's objectives and requirements. Understanding the 'why' facilitates a smoother transition to the 'how' and 'what' of project execution.

Data Collection / Review of Past Studies and Record Drawings: Our data gathering process encompasses orthophotography, LiDAR, existing record drawings, GIS databases, and previous studies. Supplementary data such as meter records and maintenance history are also reviewed to influence our design approach. This review aids in understanding the existing conditions and any potential challenges that may arise during the project lifecycle. If additional surveys or investigations are deemed necessary, these will be performed to ensure a well-informed planning phase.

Site Visit / Field Work: An essential component of our preparatory work, site visits provide firsthand insights into the project environment. These visits are critical for identifying potential issues related to site access, traffic management, zoning regulations, utility conflicts, and overall constructability.

Analysis and Reporting

By leveraging advanced modeling techniques, we aim to deliver optimized solutions that address the specific needs of the City. Our reports will articulate the project's requirements, analyze

alternative solutions, and propose recommendations based on a holistic evaluation of social, environmental, and economic factors.

Design and Development

Post-planning, we transition seamlessly into the design phase, developing detailed documentation that reflects the project's conceptual framework. Our iterative design process ensures that each phase of documentation—preliminary (30%), developed (60%), and near-complete (90%)—undergoes rigorous review and refinement to meet City of Las Cruces's expectations and regulatory requirements.

Bidding and Contract Negotiation

Our team is adept at facilitating the bidding process, from document preparation to bidder evaluation and contract finalization. Our comprehensive support aims to secure competent contractors while ensuring project specifications and budgetary constraints are met.

Construction Phase Oversight

Smith Engineering prides itself on offering end-to-end project management services, from initial planning to construction completion. Our on-site representatives ensure strict adherence to project specifications, quality standards, and safety protocols, fostering effective communication and swift resolution of any construction-related issues.

Smith Engineering is committed to delivering high-quality, efficient, and responsive engineering services to support the diverse needs of City of Las Cruces's municipal infrastructure projects, ensuring successful outcomes that benefit the community and stakeholders involved.

Quality Assurance and Control Overview

At Smith Engineering, quality is at the core of everything we do. Our Quality Assurance Program is designed to ensure excellence across all our projects. This approach is not limited to individual tasks; it is embedded in our company culture. We prioritize key aspects such as safety, environmental care, adherence to client goals, project timelines, and budget management.

Our Quality Assurance framework includes:

- Organizational Structure: We have established clear guidelines for management, defining roles and responsibilities to ensure efficiency and accountability.
- Staff Training: Continuous training is crucial for our team to stay updated with industry standards and enhance their skills.
- Improvement Initiatives: We are committed to ongoing improvement, constantly seeking ways to enhance our processes and outcomes.
- Document Management: Accurate and accessible documentation is vital for transparency and compliance.

For specific projects, we develop a detailed Quality Control Plan, starting with an initial project meeting. This meeting sets the foundation by defining the project team, scope, objectives, compliance standards, CAD protocols, deliverables, timelines, and communication plans.

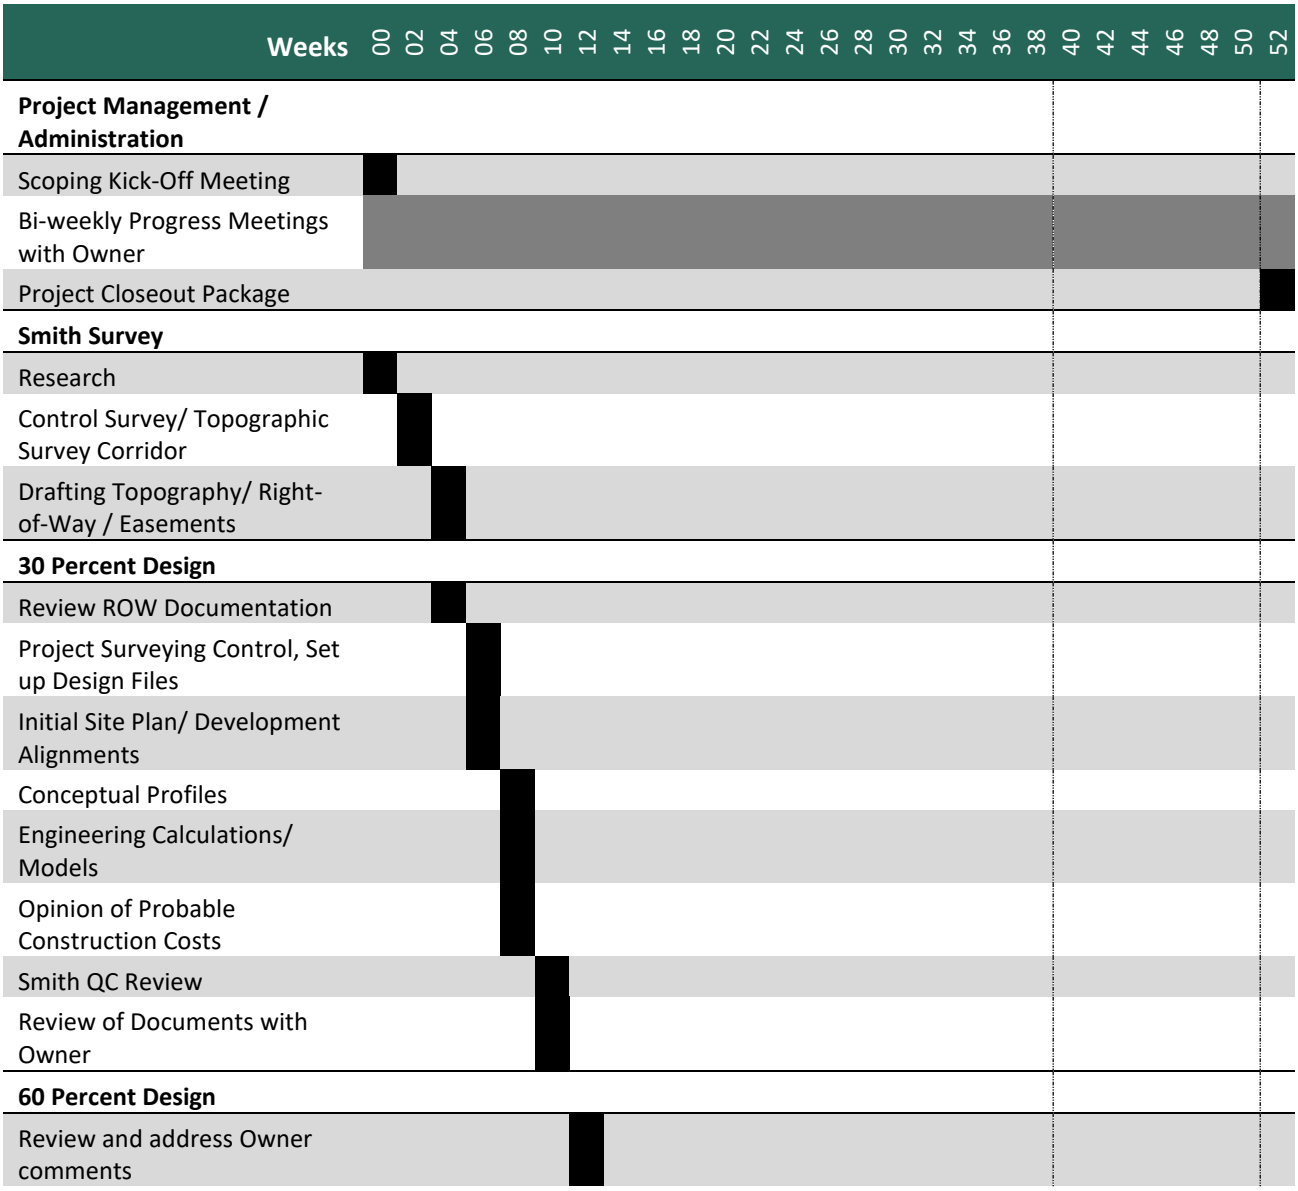
Our quality control process includes internal reviews at each project phase, covering all disciplines involved. The initial review during the conceptual phase is critical to ensure the feasibility and alignment with the project's design criteria. Subsequent reviews during

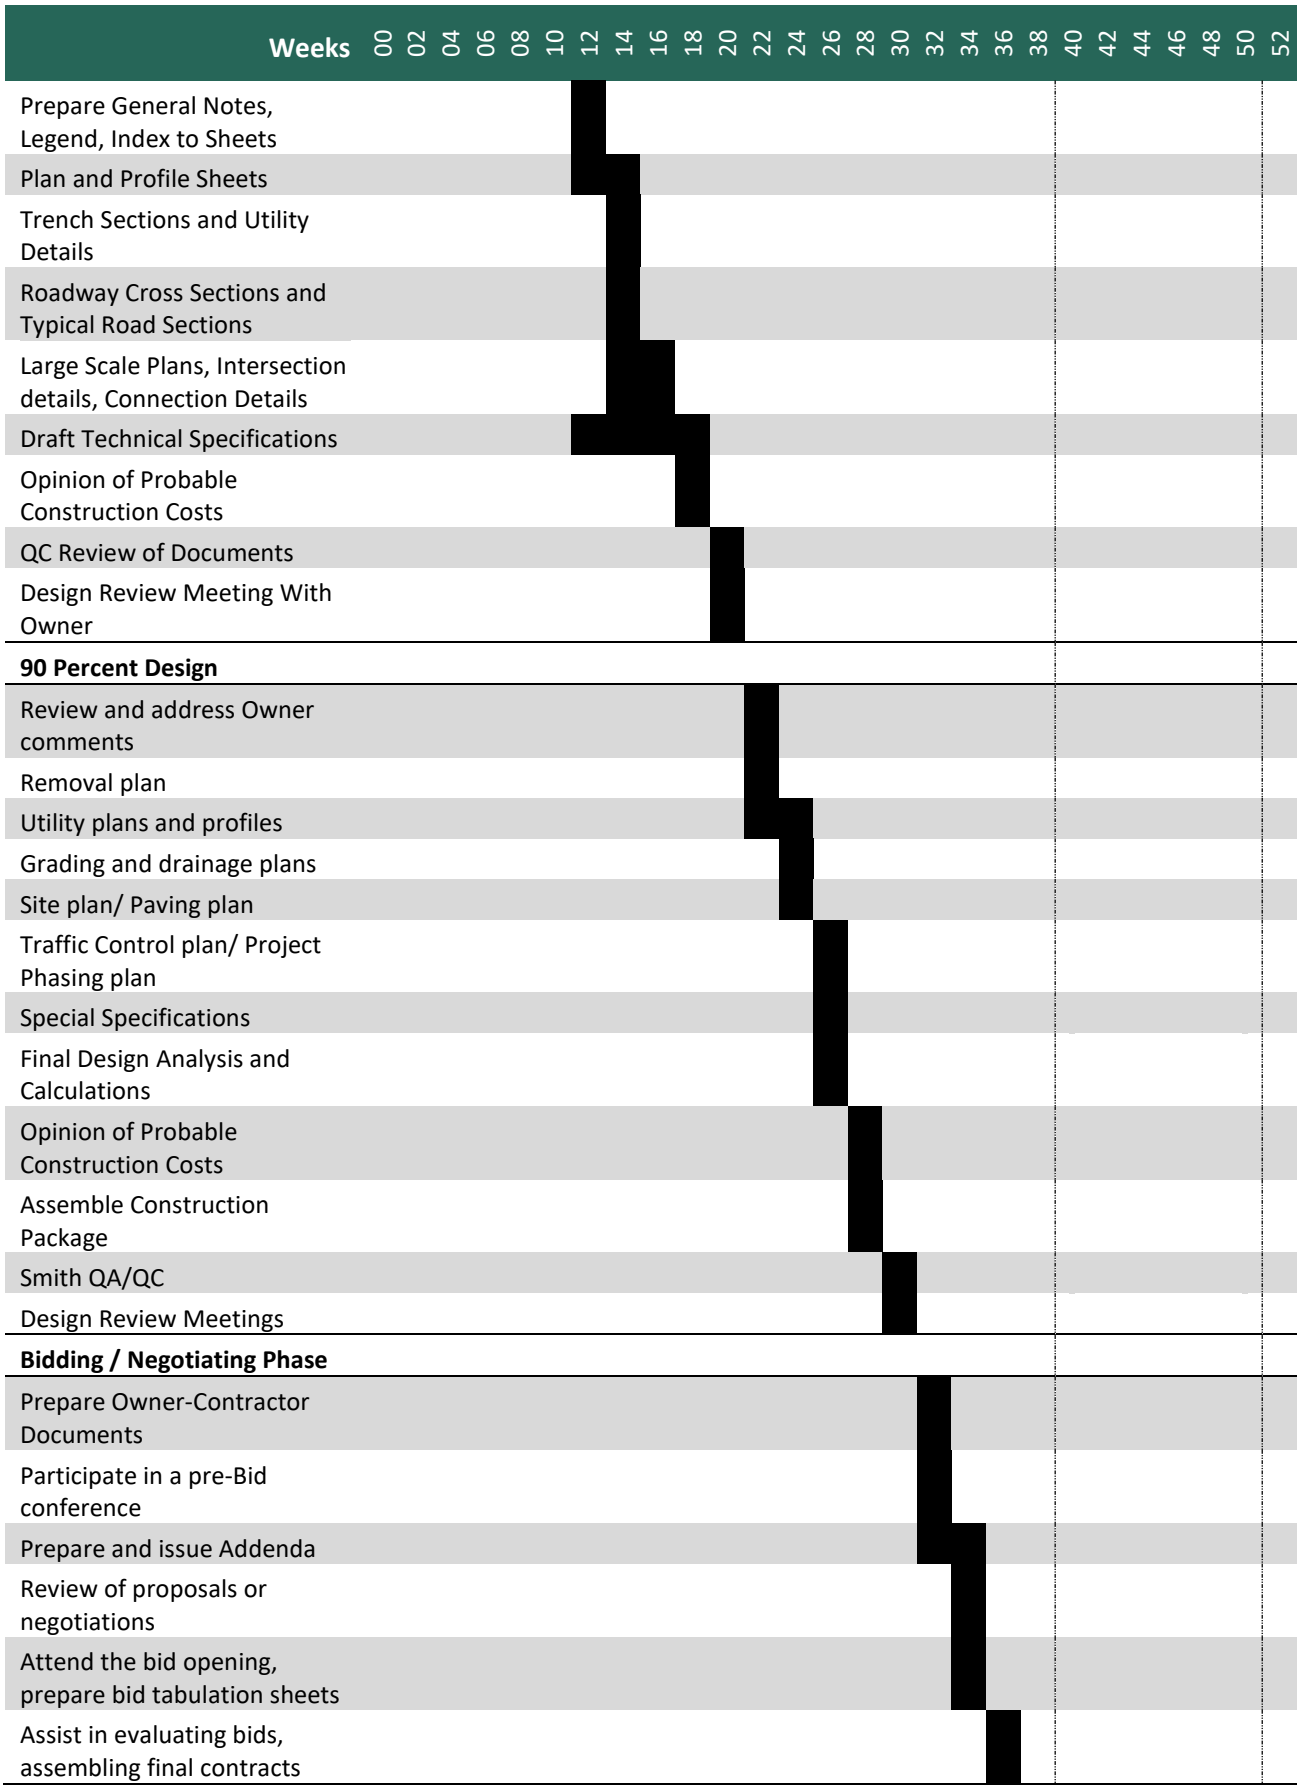
preliminary and final design phases ensure consistency with the project concept, compliance with standards, and the practicality of the construction plans.

Each review is thoroughly documented in line with our Quality Assurance Plan, ensuring a clear record of our quality control measures. If requested, we are prepared to provide the City with an in-depth view of our Quality Assurance Program to demonstrate our commitment to maintaining high standards of quality.

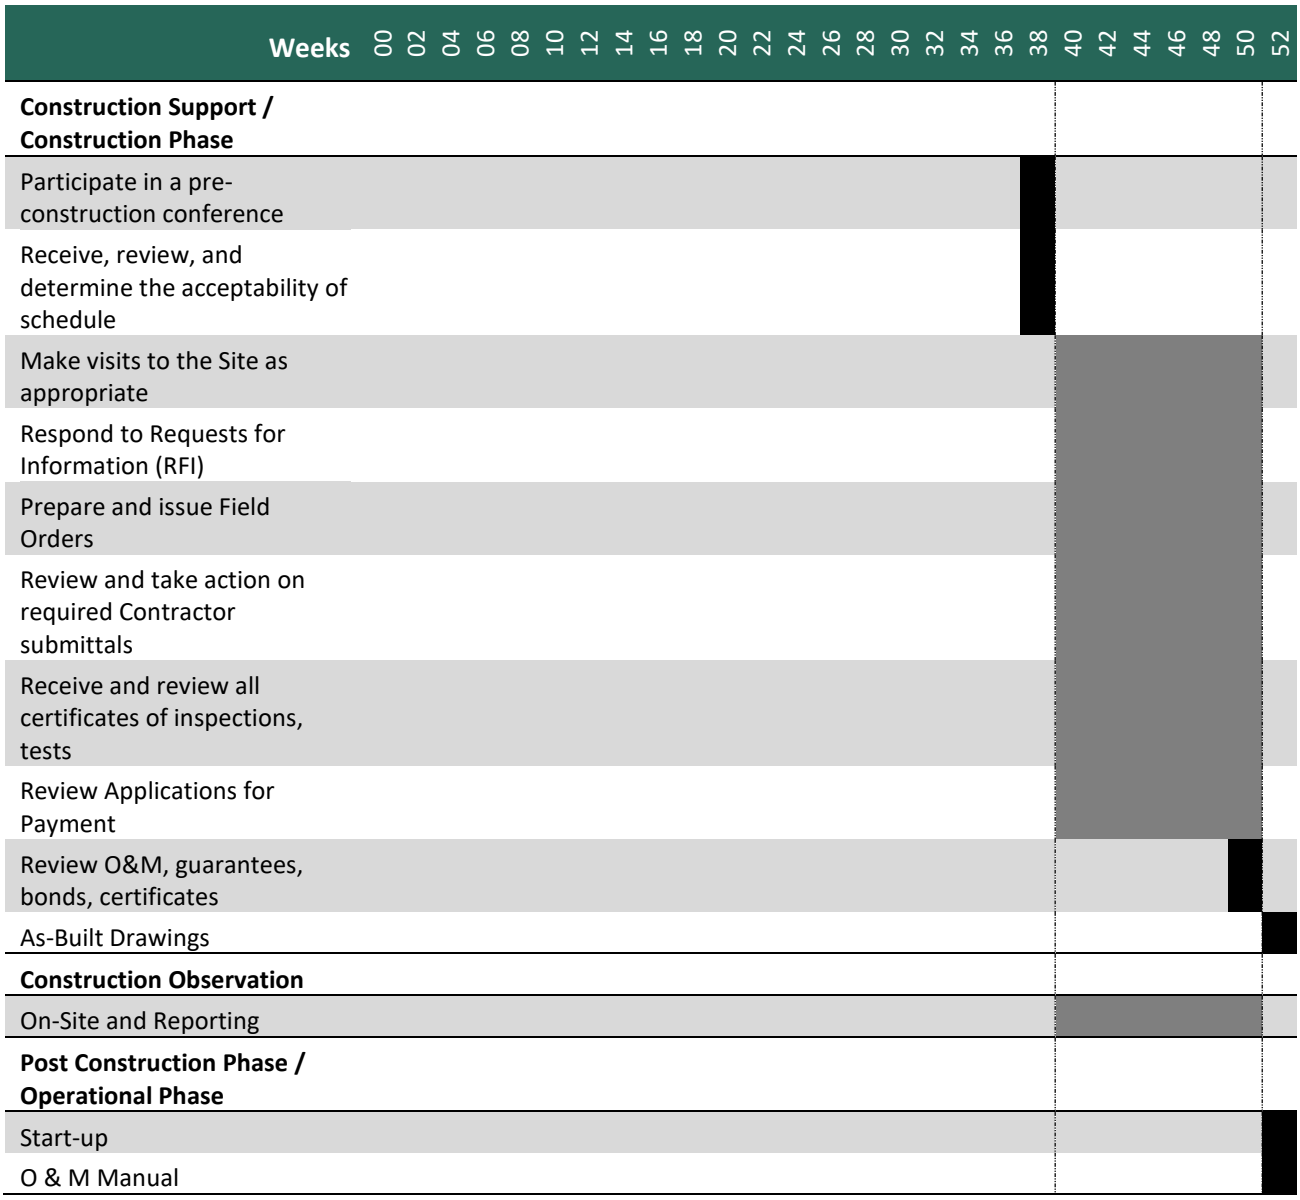
Typical Civil Engineering Project Schedule

The schedule outlined below presents a framework of standard tasks and associated timelines. It is important to note that the specific tasks required, and their durations may vary based on the nature and intricacy of each project.





Weeks
00 02 04 06 08 10 12 14 16 18 20 22 24 26 28 30 32 34 36 38 40 42 44 46 48 50 52
Prepare General Notes, Legend, Index to Sheets
Plan and Profile Sheets
Trench Sections and Utility Details
Roadway Cross Sections and Typical Road Sections
Large Scale Plans, Intersection details, Connection Details
Draft Technical Specifications
Opinion of Probable Construction Costs
QC Review of Documents
Design Review Meeting With Owner
90 Percent Design
Review and address Owner comments
Removal plan
Utility plans and profiles
Grading and drainage plans
Site plan/ Paving plan
Traffic Control plan/ Project Phasing plan
Special Specifications
Final Design Analysis and Calculations
Opinion of Probable Construction Costs
Assemble Construction Package
Smith QA/QC
Design Review Meetings
Bidding / Negotiating Phase
Prepare Owner-Contractor Documents
Participate in a pre-Bid conference
Prepare and issue Addenda
Review of proposals or negotiations
Attend the bid opening, prepare bid tabulation sheets
Assist in evaluating bids, assembling final contracts



Weeks

Construction Support / Construction Phase
Participate in a pre-construction conference
Receive, review, and determine the acceptability of schedule
Make visits to the Site as appropriate
Respond to Requests for Information (RFI)
Prepare and issue Field Orders
Review and take action on required Contractor submittals
Receive and review all certificates of inspections, tests
Review Applications for Payment
Review O&M, guarantees, bonds, certificates
As-Built Drawings
Construction Observation
On-Site and Reporting
Post Construction Phase / Operational Phase
Start-up
O & M Manual

Qualifications and Competence

At Smith Engineering Company, we are proud to present our team's comprehensive expertise in response to the services outlined in the Request for Proposals. Our professionals bring a wealth of experience and a proven record in delivering high-quality engineering solutions across a variety of projects. Below, we detail the qualifications and competencies of our key team members who are poised to contribute significantly to the success of the projects/ task orders under this contract.

Subconsultant

Subsurface Utility Exploration
Cobb Fendley & Associates

Rusty Payne, PE

Position: Senior Civil Engineer, Team Leader, and Project Manager

Education: B.S. in Engineering Technology, New Mexico State University

License: New Mexico Professional Engineer, 23566

Expertise: Rusty Payne leads our Las Cruces office with experience in project coordination, studies, budget development, and civil engineering design. His role as Project Manager has seen him establish project scopes, develop fee estimates, and oversee budget creation. Mr. Payne excels in supervising and coordinating design teams and has a notable record in managing project schedules in collaboration with clients, subconsultants, and contractors to ensure technical project success.

Specializations:

Transportation Engineering: Mr. Payne has led numerous transportation projects ranging from residential street maintenance to state highway reconstructions. His notable projects include the Alamogordo Scenic Drive Extension, featuring comprehensive design work on infrastructure components. His expertise extends to ADA-compliant designs.

Storm Drainage Design: As the Engineer of Record for various projects in Doña Ana County, Mr. Payne has delivered exceptional solutions for surface drainage, detention ponds, and storm drain systems, enhancing community safety and flood protection.

Utility Design: Mr. Payne's utility design experience encompasses sewer pipelines, lift stations, and water distribution systems, with projects like the Alamogordo US 70 & MLK Jr. Blvd. Waterline Replacement highlighting his capability in this area.

Site Development: With a focus on commercial and residential developments, Mr. Payne has successfully managed site planning and development projects, ensuring they meet client needs and regulatory standards.

Jared Lujan, PE

Education: M.S. in Civil Engineering, Texas Tech University; B.S. in Civil Engineering, New Mexico State University

License: New Mexico Professional Engineer, 20435

Affiliation: American Society of Civil Engineers

Expertise: Jared Lujan has distinguished himself in the field of waterline and sewer line rehabilitation, replacement, and relocations with over a decade of experience managing critical infrastructure projects. His work encompasses extensive construction administration and expertise in trenchless rehabilitation technologies, contributing to the sustainable management of water and sewer systems. He is the primary consulting project manager and engineer of record for utility rehabilitation projects for the Albuquerque Bernalillo County Water Utility Authority.

Jesus Lopez, PE

Education: B.S. in Civil Engineering, University of New Mexico

License: New Mexico Professional Engineer, 26361

Expertise: With eight years of professional experience, Jesus Lopez has excelled in project management, design, and construction management for both residential and commercial developments. His proficiency in hydrologic and hydraulic modeling, alongside comprehensive project management skills, has been instrumental in the successful completion of various public infrastructure projects. Many of his hydrologic and hydraulic projects have been in the Las Cruces and Doña Ana County area.

Nancy Peay, PE

Position: Civil Engineer, Project Manager

Education: B.S. in Civil Engineering, University of New Mexico

License: New Mexico Professional Engineer, 26788; Water Op., 19900

Affiliation: NMNSPE Board of Directors

Although the RFP did not require assistance with water/ wastewater and permit assistance, we thought it pertinent to offer Ms. Peay's services as she has assisted many of our on-call municipal clients in this manner.

Expertise: Nancy Peay brings over seven years of engineering experience in water, wastewater, and sewer system design. Her comprehensive skill set includes construction services, system permitting, and the development of engineering reports for municipalities and utility providers. Ms. Peay's involvement in significant projects, from mutual domestic collections systems to municipal wastewater treatment plant improvements, underscores her proficiency in this field.

Michael Douglass, PS

Education: B.S. in General Studies, New Mexico State University

License: New Mexico Professional Surveyor, 29182

Expertise: With over 27 years in land surveying, Mike Douglass brings an unmatched depth of knowledge in boundary determination, topographic surveys, and construction staking. His expertise is crucial in ensuring accuracy and compliance in the planning and execution of engineering projects.

Brandon Cruz, EI

Education: B.S. in Civil Engineering, University of New Mexico

Expertise: Brandon Cruz's expertise lies in hydrologic and hydraulic modeling, contributing to the design and analysis of flood control projects. His involvement in significant FEMA flood studies and drainage improvement projects demonstrates his capability in addressing complex water management challenges.

Sam Johnson

Education: A.A.S. in Civil/ Survey Technology, New Mexico State University

Expertise: Sam Johnson specializes in construction observation, offering invaluable insights and detailed reporting on a range of projects from infrastructure improvements to site development. His diverse project experience ensures adherence to design specifications and project timelines.

Cobb Fendley & Associates

Subconsultant Subsurface Utility Exploration (SUE)

Christopher Almy, PE

calmy@cobbfendley.com, 575-650-0649

Mr. Almy is a Senior Project Manager and Senior Associate for Cobb Fendley. He has experience on both the civil engineering side and managing subsurface utility engineering (SUE) activities. Cobb Fendley & Associates (CFA) provides SUE services for leading private and public sector clients including utility companies and various municipalities. The firm has collaborated with clients and design consultant teams to assess and implement SUE strategies that eliminate utility conflicts and reduce costly construction delays.

Our team at Smith Engineering Company is committed to delivering excellence and innovation in every project we undertake. With our extensive qualifications and dedication to client satisfaction, we are confident in our ability to meet and exceed the expectations of the City of Las Cruces.

Performance of Smith Engineering Company

Smith Engineering has maintained an ongoing collaborative relationship with various municipalities in New Mexico, serving on an on-call basis for numerous projects over the years. In the following section, we detail three references most relevant to the prospective contract with the City of Las Cruces. For each, we provide the contact information of a reference individual and tasks undertaken by the proposed team that align closely with the scope of work anticipated for the City. Each team member named in this proposal took on roles such as manager, designer, surveyor, or observer in numerous outlined tasks.

Conclusion

In conclusion, Smith Engineering Company remains steadfast in our mission to engineer infrastructure in our communities. Our vision is clear—to deliver high-quality, creative, and value-driven engineering solutions through close collaboration with our staff and clients. We are dedicated to building upon our values of family, service, and integrity, ensuring that each project contributes to the well-being of the communities we serve. By entrusting us with the City of Las Cruces's municipal infrastructure needs, you are partnering with a team committed to the City's vision (community, cultural diversity, natural amenities, quality of life). We will bring our expertise and passion for engineering to every task, working towards shared goals of community enhancement and sustainable development. We appreciate the opportunity to present our proposal and eagerly await the chance to contribute to the City's future.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called "CITY" and Stantec Consulting Services, Inc., of 370 Interlocken Blvd, Ste 100, Broomfield, CO, 80021, hereinafter called "CONTRACTOR".

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment "A") during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY'S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY'S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Stantec Consulting Services, Inc. 370 Interlocken Blvd, Ste 100 Broomfield, CO 80021 ATTENTION: Gabby Contreras Apodaca

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

Las Cruces, NM 88011-8447

Stantec is appropriately licensed in accordance with the laws of the State of New Mexico through the New Mexico Regulation and Licensing Department to provide engineering services in New Mexico. The principal-in-charge will be Gabby Contreras Apodaca, NMPE #16316.

Dear Members of the Selection Committee,

Our local Las Cruces employees are pleased to provide this proposal to the City of Las Cruces (City) for on-call civil engineering services. We have experienced the challenges that the City has experienced from rapid growth due to being an affordable retirement destination as well as a college town.

Local Experience. We are focused on the success of the City and hope to become a trusted partner with you. Stantec has been in New Mexico for more than 45 years and Las Cruces for 27 years. Our team members live in this city and have developed a strong team who has collaborated and worked with federal, state, and local agencies. They've designed transportation facilities, storm drain systems, utility infrastructure, site development, and airport facilties; conducted subsurface utility exploration, civil engineering related investigations and studies, construction contract administration, land surveying; and prepare drainage reports. Additionally, we can provide expert witnesses, design and construction project managers, and construction inspectors.

The Stantec Difference. As a company of more than 28,000 employees, you will have access to some of the best civil engineers, construction managers, grant writers, planners, utility coordinators, quality assurance, and constructability reviewers. We are defined by more than our services. We care about the City's current and future infrastructure needs because this is our city. Our experience, as well as our understanding of processes and requirements, emphasizes Stantec's innovative spirit and our dedicated pursuit of not only what is current, but also what is best for your future needs. With long-term commitment to the people and places we serve, our local presences allows Stantec to connect on a personal level and advance the quality of life in Las Cruces.

If selected, we will use the Las Cruces Comprehensive Plan, "Elevate Las Cruces" as well as resolutions and staff input to help us support you.

Thank you for your consideration. Gene Paulk will be your primary contact and is available if you have questions or need more information.

Sincerely,

Stantec Consulting Services Inc.

EVALUATION CRITERIA NO. 1

Technical Approach

A. PROFESSIONAL, TECHNICAL, AND CUSTOMARY SERVICES

We will provide a client service manager (CSM), **Gene Paulk**, as the primary point of contact. He will be in frequent contact with you to make sure that our project teams are responsive and providing services that meet the City's needs and expectations.

The principal-in-charge (PIC), **Gabby Contreras-Apodaca** will have the authority to make contractual and other decisions on behalf of Stantec. She will be involved upfront in the development and approval of task orders and will remain engaged in each project.

Depending on the type of project, a project manager will be assigned to each project. Clear and effective communication with the City is critical for project success. **We will conduct bi-weekly or monthly project meetings with the City, and others as needed, to discuss status, concerns, upcoming critical milestones, and other project issues.** Internal project team meetings are held every week on major projects. All meetings are recorded, and minutes are distributed following the meetings.

To assure a high-quality product, in accordance with our ISO certification, all deliverables require three steps of review and approval before submittal to the City including:

- Quality control by the task leader
- Quality assurance by the engineer of record (project technical leader)
- An independent peer review

Stantec's proposed approach and process that we generally follow is described below. The process will vary with certain types of projects and/or funding. For example, federally funded transportation projects will generally require a Phase A/B/C Location Study with considerable public involvement. The typical state or locally funded project would be accomplished as follows:

Request for Proposal: Would generally flow from the City to Stantec's CSM. The CSM would then confer with the PIC and a team would be assigned. The CSM and project manager will then confer with the City to make sure that we fully understand the City's project scope, objectives, and requirements for the project.

Proposal and Task Order: The project manager will develop a detailed scope of work and fee proposals with a breakdown of tasks, including team members performing the tasks, and hours to complete each task at the applicable hourly billing rate. A detailed project schedule and a task order will also be prepared. After the proposal is reviewed by an independent reviewer, it is approved by the PIC and then submitted to the City for consideration and negotiation.

Project Kick-Off: Upon receipt of the notice to proceed, we will conduct a project kick-off meeting with the project team, including any subconsultants, and applicable City representatives. The scope of the project, client expectations and requirements, roles and responsibilities, project schedule, plan for deliverables, and documentation requirements will be discussed; and a site review will be conducted.

Design Analysis Report (DAR): Existing conditions are investigated and analyzed during this stage which, depending on the type of project, may include geotechnical and soils, traffic and safety, hydrology and hydraulics, utilities, right-of-way and land ownership, environmental, social, and cultural resources, physical condition of facilities and other conditions that will affect the design and show the purpose and need for the project. If not previously performed, alternatives will be identified and evaluated for determination of the most cost-effective solution on a life-cycle cost basis that will best meet the purpose and need for the project. Findings and recommendations are made in a DAR and presented to the City for review and approval. The DAR is updated with each stage of the design.

Project Design: We will design and develop plan drawings in three stages. Each stage will progress upon receipt of written approval from the City for the previous stage:

- Topographic surveying and mapping as needed.
- Preliminary Design Submittal (approximately 30%)–Develop preliminary plan drawings establishing line and grade, define right-of-way and permitting needs and conduct utility coordination meeting, develop construction cost estimate, update overall project schedule, submit drawings, and conduct review meeting with City and applicable agencies.
- Pre-Final Design Submittal (Approximately 60%)–Develop pre-final design drawings, incorporating comments from the preliminary design stage and refine preliminary plans. Incorporate other drawings, such as traffic control plans, TESCM plans, quantity schedules, etc. to provide all drawings that are necessary for the project, update construction estimate, overall project schedule, submit plans to utility companies and coordinate and conduct meeting, and submit plan drawings and permits to City and applicable agencies. SUE may be needed during this stage to delineate and locate underground utilities, and if right-of-way is required, mapping begins in this stage.
- Final Design Submittal (Plans, Specifications, and Estimate) and Bid Package–Refine pre-final drawings and incorporate comments from pre-final design review and develop technical specifications as needed, update construction estimate, and construction schedule, submit plans to utility companies and coordinate and conduct meeting, submit drawings, bid documents, technical specifications, and construction estimate and conduct final review with the City and applicable agencies. If right-of-way acquisition is required, it begins in this stage.

Bidding: Advertise for construction bids, conduct pre-bid meeting, prepare, and distribute addenda as needed, attend bid opening, tabulate, and assist City in evaluating bids, advise the City as to acceptability of subcontractors and suppliers and prepare a recommendation of award letter.

Construction Administration & Observation: Complete executed construction contract documents, coordinate and conduct preconstruction conference, log, review and approve the contractor's submittals, make field visits during construction, and provide interpretations of the contract documents as needed, coordinate, and prepare change orders as needed (if requested), review and approve the contractor's pay applications (if requested), and conduct weekly meetings with the City and the Contractor. Stantec will also provide a full-time or part-time construction representative if requested.

B. MAJOR TASKS AND C. DETAILED STATEMENT OF SERVICES UNDER EACH TASK

Design of Transportation Facilities, Storm Drain, Utilities

Our New Mexico design team has completed hundreds of municipal, county, state, and federal projects ranging from less than $50,000 to more than $20M. We have extensive expertise in all facets of engineering design.

During the development of a project, we will consider different design stages and reviews and submit for your approval. The number of reviews may differ depending on the phase and milestones. These are established at the onset of the project during scoping and kickoff. The first review milestone will typically be the preliminary design, corresponding to 30% of project completion. During this period, a conceptual design and selection of potential alternatives will be performed. We will prepare conceptual plans and a conceptual cost estimate upon completion of this design stage.

The second design stage is equivalent to 60% project completion. The design of the selected alternative will be carried out in this stage. The comments received during the 30% submittal will be incorporated, and an updated cost estimate will be prepared.

The third design stage is the final design stage, which corresponds to a 90% submittal. At this stage, comments on the 60% submittal are addressed, and drawings, specifications, and a cost estimate are essentially complete.

The final submittal includes engineer-stamped and signed plans, technical specifications, and an opinion of probable construction cost (OPCC). The number of plan sheets, and specifications prepared and delivered to the client will depend on the project. However, we will work with you to verify any plans and specifications meet your current standards and are produced in the required media and time frame.

Site Development

Our civil engineers consider factors such as roadway and parking lot slopes, building pad elevations, and surface water flow when designing sites. The existing grade of the site is assessed early on to facilitate proper site development and cost-effective construction. We will work within the City's development standards to design municipal sites that meet local code, are ADA compliant, reduce construction costs, and enhance the site.

We have experience designing everything from small pocket parks to community centers and professional soccer stadiums. Regardless of size and scope, we are ready to deliver for the City.

Conducting All Necessary Investigations/Studies

We know delivering almost any project will come with challenges. Our approach to planning heads off most problems from the start by providing early warnings for potential course correction needs. We're passionate about creating a sense of certainty from the beginning, so you can meet your objectives with confidence and without crisis.

Stantec frequently prepares Preliminary Engineering Reports (PERs) for New Mexico communities since most funding agencies either require them or score clients better, therefore increasing chances of obtaining funding. A PER evaluates current conditions affecting the project, investigate potential alternatives, develop OPCCs, include schematic layouts for the selected alternatives, and analyze lifecycle costs, operating costs, utility rates, and local population trends as applicable. We prepare our PERs in accordance with US Department of Agriculture (USDA) standards as such standards are accepted by all federal and state funding agencies.

In addition to PERs, we prepare feasibility studies, asset management plans, comprehensive plans, 40-year water plans, conservation plans, rate studies, and master plans for our clients, depending on our client's specific needs. Often, when a community already has funding available for planning and design services, a feasibility study can be performed saving the community some upfront costs by not having to prepare a full-blown PER. We work closely with our clients to understand the problems experienced, both past and foreseen future. We also work with our clients to understand desired solutions and to provide additional alternatives the client may not have considered. It is important that we understand our client's financial status and the funding the intend to pursue so we can tailor the planning document to their precise needs.

Funding and schedule are major considerations and are addressed in the planning phase where design approach, preliminary estimates, and phasing opportunities are developed and reviewed. Often, planning workshops are held to establish project requirements, build upon previous discussions, gather stakeholder input and City user preferences, discuss issues already identified, fill data gaps, and review design concept models and cost analyses.

We are committed to bringing expertise, passion, and a collaborative spirit to the City's planning projects and wish to contribute to successful planning that impacts infrastructure for decades to come.

Subsurface Utility Exploration (SUE)

T2 Utility Engineers will lead SUE for our team. Once a task or project is assigned, Gene Paulk, our project manager, will discuss the scope with our sub-consultant and PDE to determine the degree of Utility Conflict Analysis (SUE level) needed. We will follow the NMDOT SUE process (Levels D through Level A) for a given project.

- Quality Level D: Information gathered solely from existing utility records.
- Quality Level C: Involves surveying visible, above-ground utility facilities and correlating this information with existing utility records.
- Quality Level B: Uses surface geophysical techniques to determine the existing and horizontal position of underground utilities. Methods may include electromagnetic, magnetic, or elastic wave methods. This is referred to as designating.
- Quality Level A: Provides the highest level of accuracy and involves the full use of SUE Services. It provides information for the precise plan and profile mapping of underground utilities through non-destructive exposure of underground utilities. Type, size, condition, material, and other features of the underground utilities are determined. Locating involves full use of SUE services to accurately depict underground utilities. T2 will also lead the utility coordination efforts for this project.

Construction Contract Administration

Stantec assists clients during the bidding phase by advertising for construction bids, conducting pre-bid meetings, preparing and distributing addenda as needed, attending bid openings, tabulating and evaluating received bids, advising the City as to acceptability of subcontractors and suppliers, and preparing recommendation of award letters.

Land Surveying Activities

Surveying is the science of collecting, analyzing, displaying, and managing spatial information. The art is in interpreting this information for legal matters of land definition or to support mapping, design, and construction activities. Addressing unique aspects of each project, our experts offer survey services that include boundary and cadastral surveys, topographic mapping, construction staking, residential builder layout, ALTA/ACSM surveys, 3D laser scanning, geodetic and control surveys, route surveys, as-built surveys, aerial photogrammetric mapping, water rights surveys,

hydrographic/bathymetric mapping, and SUE.

Our survey team also performs property surveys and develops easement and ROW mapping. We have completed plats with legal descriptions for the acquisition of ROW and/or easements and, for larger projects, and ROW mapping together with title searches. We also have a ROW acquisition team that provides acquisition services to clients.

Our in-house survey team can perform all the services outlined within the RFP and will occasionally team with surveying subconsultants when needed, depending on availability and cost. We want to provide the City with the best product and price available.

Drainage Reports and FEMA Flood Studies

Stantec's storm water and drainage related services encompass a wide range of expertise and knowledge, including floodplain delineations, flood control design, bridge hydraulic design, drainage infrastructure design, watershed hydrology, sediment transport analysis, drainage design manuals, training programs, alluvial fan analysis, storm water management studies, computer modeling, and drainage master plans. We work regularly with FEMA on CLOMR/LOMR projects for communities. Our services also incorporate critical inclusion of client and stakeholder input through public participation. In addition, our team has experience developing regulatory and management solutions versus structural alternatives. Projects often include multi-objective components, such as open space habitat and recreation. Public education concerning the multi-objective benefits that water resources play in a community is a key component of our approach and assists our clients by gaining broad-based support for their initiatives.

Design of Airport Facilities

From roadways and runways to full hangar and terminal design, our thorough understanding of airport operations drives us to create facilities that are more efficient and safer than ever before. Our work includes airside, landside, and architecture services at both regional and international airports, such as Phoenix Sky Harbor International Airport. Stantec's US West Airport group includes more than 25 professionals who have been providing architecture and engineering services to airports across the southwest for more than 30 years. Our aviation team includes architects, engineers, water professionals, construction managers and inspectors, environmental professionals, and individuals with decades of experience working and coordinating with the Federal Aviation Administration (FAA), a variety of airport sponsors, and key airport stakeholders.

Expert Witness in a Judicial and/or Quasi-Judicial Setting

We understand that there may come a time when you need specialized knowledge in specific engineering areas from neutral and impartial servants. Our team includes skilled experts in every field of engineering who can help others understand technical information, present substantiated, unbiased evidence, and provide credible conclusions.

Project Management

Stantec implements a Project Management (PM) Framework that outlines the mandatory tasks for all our projects, including on-call task orders. The scalable PM Framework brings a pragmatic and disciplined approach to project delivery. It includes:

- Critical Path Method (CPM) Scheduling: We'll develop a CPM schedule outlining the project's major activities and related durations. We use MS Project as our primary scheduling software.
- Budget Control: Our enterprise software application allows management of project design expenditures through close monitoring and earned value analysis reporting. We draw on our extensive project knowledge to provide early project scoping costs, updates, and final construction estimates.
- Quality Assurance/Quality Control (QA/QC): With our comprehensive quality program, we deliver final services that have been through detailed review, thereby limiting errors and omissions to provide you with high-quality products.
- Value-Added Services: Because we have experts and experience in a diverse range of projects, we bring our knowledge of various construction options to designing a project that will best meet your needs.

Construction Inspection

Construction inspection is essential for the success of all projects in the construction phase. Experience shows that proper construction observation saves time and money, reduces construction related problems, and is the key to a quality project. Stantec's team has vast experience in working with contractors, associations, utilities, homeowners, and funding agencies during construction. We have New Mexico Department of Transportation and municipal trained staff for construction management and observation with a wide variety of backgrounds to review submittals, track pay applications, and to work directly in the field with City officials and contractors.

We can provide observation services from full to part-time as needed by the City and tailor our services to fit the City's specific needs and

budget. Our team of construction observers are experienced in construction oversight and communication with project teams and will work closely with your staff to provide technical support during the construction phase of the project. We anticipate potential construction problems and prevent them before they occur.

During the pre-construction meeting, the frequency of construction meetings between the client, our team, affected utility companies, and the contractor will be determined. While construction is ongoing, plans for the upcoming work period and any issues of concern are discussed and resolved at periodic meetings. If problems do occur, we seek a timely resolution and involve the project technical lead and the client as soon as the problem is known.

If called upon, we have the capacity and capability to provide construction staking, materials testing, pay estimate processing, shop drawing reviews, and funding/review agency coordination.

After completing construction, we will coordinate and conduct a final inspection, obtain contract closeout documents, coordinate record drawings, and assess the final funding balance. We will tailor our services to provide what you need during the construction phase.

D. TYPICAL PROJECT SCHEDULE/TIMELINE

Schedule control begins with the development of the project plan, which includes scope of work and fee proposal development. We prepare a detailed and realistic breakdown of all the tasks to be performed, reviews and approvals that must be obtained, and coordination that must occur. Identifying and using the critical path method, we determine when each task must be finished and consider the amount of time it will take, and when it must begin. If a project begins to fall behind schedule because of a reason we have control over, we will add additional resources or put in the extra time needed to get the project back on track. We review the schedule during internal design team meetings and again with regularly scheduled status meetings with the owner.

Working closely with public and private entities early in the design stage is crucial to identifying constraints and refining the relative infrastructure locations to mitigate the issues that can lead to delays and cost overruns. We will take the following actions to effectively manage the schedule for the life of the project:

- Provide an updated schedule during progress meetings with the City and at project milestones (i.e., planning, 30%, 60%, 90%, etc.).
- The schedule will be efficiently executed, monitored, and updated weekly by the project manager to provide real time evaluation and adjustments as required and verify project goals are being met.
- Engage with the City, adjacent property owners, utilities, and other entities to identify issues that could lead to design and construction delays and cost overruns.
- Document and track potential risks in a Risk Management Log along with mitigation measures to avoid delays and overruns.
- Review the Risk Management Log with the City during monthly progress meetings so the City is aware of the project risks and agrees with any mitigation measures.

Below is an example of a typical project schedule based on general phases of work.

Notice to Proceed → **Project Closeout**

Planning/Programming
- Project Identified
- Scoping

GABBY APODACA, PE (NM # 16316)

Role: Principal-in-Charge
Experience: 31 years **Availability:** 20%

Gabby, an NMSU graduate, spent 26 years working with NMDOT. She understands the intricate details of working on transportation infrastructure in New Mexico. Her time with NMDOT was comprised of various roles with Districts 1 and 2. Within her role as manager at the South Region Design Center she managed Statewide Transportation Improvement Program (STIP) projects for NMDOT and local governments while working closely with the Federal Highway Administration (FHWA) to achieve federal compliance and assuring that Federal funds were spent and forecasted.

GENE PAULK, PE (NM #15573)

Role: Client Services Manager
Experience: 27 years **Availability:** 30%

Gene, an NMSU graduate, brings experience in transportation engineering, including planning, budget allocation, and project and personnel management. He has extensive experience working with NMDOT and local government municipalities including City of Deming and City of Las Cruces. This experience has given Gene a deep understanding of the standard processes, challenges, and needs associated with municipal on-call contacts. As a lifelong resident of the New Mexico, he's worked throughout the southwest and is dedicated to the safety and development of transportation infrastructure within the state.

DAVE MAXWELL, PE (NM # 8768)

Role: QA/QC
Experience: 47 years **Availability:** 15%

Dave has been working in the consulting engineering business for more than forty-five years and has extensive experience on public works projects covering most aspects of this contract. His experience includes project management, design, and construction management for roadways, drainage infrastructure and studies, water systems, sanitary sewer, storm sewer, transportation, traffic signalization, recreational trails and related improvements with construction costs ranging from less than $100,000 to more than $60 million. Since 1988, Dave has managed several urban and rural projects for local government municipalities. He is included in this proposal because he is focused on our clients and has a deep commitment to providing a high level of service.

TRENT DOOLITTLE, PE (NM # 16017)

Role: Project Manager
Experience: 26 years **Availability:** 30%

Trent brings a long history of NMDOT experience. After starting as a construction project engineer, Trent advanced to assistant district engineer and district engineer before moving up to deputy secretary of operations, where upon retirement, he joined Stantec. He is highly skilled in program management, problem solving, team building, and people management. Trent provided executive level leadership and was responsible for the oversight and management of twelve hundred employees and an operating budget topping one billion dollars. This history gives him an in-depth understanding of NMDOT's standards and practices. At Stantec, his focus includes project management in New Mexico, Arizona, and California on projects such as high-speed rail, international ports of entry, and transportation infrastructure improvements.

COLLEEN RUIZ, PE (NM#16240)

Role: Site Development
Experience: 27 years **Availability:** 10%

Colleen, an NMSU graduate, sees opportunity in Las Cruces — an opportunity to help the community build strong, sustainable infrastructure while respecting history and planning for the future. She understands the funding mechanisms and processes within the state to help match community contributions for big changes. With more than two decades of engineering design experience working on multi-disciplinary projects across New Mexico, and beyond, she has a knack for empowering communities to realize their potential and works with stakeholders to make sure all voices are heard. As the sector leader for New Mexico's community development group, Colleen works with project teams to set clear objectives, staffing, project needs, schedules, and expectations. She has worked with a wide variety of clients including municipalities, military facilities, major technology companies, and developers across the Southwestern US to design their visions.

CLAY KOONTZ, PE (NM # 14493)

Role: Traffic & Lighting Lead
Experience: 27 years **Availability:** 20%

Clay, an NMSU graduate, is a transportation, traffic, and highway safety engineer with consulting experience in New Mexico. He has a wide variety of traffic engineering experience in all areas of the state. Clay has served as traffic engineer on small and large, municipal and NMDOT projects. Such projects have included traffic operations, planning, public involvement, traffic data collection, traffic signalization, and roadway lighting. He has specialized experience as highway safety engineer for the strategic highway safety plan for NMDOT and led multiple road safety audits across the state. He is currently serving as technical lead for the design of the NM 31/US 285 Intersection Realignment Alignment Study and Design, the Jal Relief Route Location Study and Design, the US 60 (Ft Sumner to Clovis) Location Study, the Eddy County Carrasco Extension (South Bypass) and the Hyde Park (Santa Fe to SF Ski Resort) Location Study. Clay was chosen as transportation project technical lead for this proposal because of his history and experience of supporting clients on similar tasks and projects and his experience in working together with Gabby as a successful leadership team.

SHANTI CEANE, PE (NM #23206)

Role: Construction Inspection
Experience: 21 years **Availability:** 30%

Shanti serves as the construction manager on transportation, stormwater, and water/wastewater utility projects across New Mexico. She has served as a design technical lead before moving back into a construction management role. Shanti manages a large crew of construction observers and has completed construction management services on several local government and NMDOT projects across the state including US 54 Reconstruction (17 miles), the Eddy County SE Loop (12 miles), the Ridge Road/Little Walnut Reconstruction in Silver City, and Reconstruction of White Mountain Road in Mescalero Indian Reservation. She is included in this proposal because of her extensive experience with management of large construction projects.

GERARDO TORRES, PLS

Role: Surveying
Experience: 17 years **Availability:** 25%

Gerardo, an NMSU graduate, is a licensed professional land surveyor with experience in land surveying, ranging from field work to project management. He previously managed the surveying operations for the State of New Mexico for several years, leading survey projects for a wide variety of clients. Gerardo has a broad base of surveying work experience including large-scale right-of-way projects, topographic mapping, subdivision preparation, ALTA land title surveys, residential/condominium surveys, and construction surveys. He has worked with terrestrial scanners, robotics, GNSS, drone flights, and conventional total stations

ZACH WHITTEN, PE

Role: Drainage Engineer
Experience: 16 years **Availability:** 20%

Zach brings FEMA Risk MAP experience with seven years of dedicated Region IX work which include similar terrain and geomorphic characteristics as the City. His project experience includes more than 30 FEMA hydrologic and hydraulic (H&H) studies, as well as 13 detailed watershed analyses. Zach has developed complex HEC-RAS 1D and 2D models and brings experience in the areas GIS application, water quality management, and performing levee inspections. He is proficient in numerous software applications including FLO-2D, RiverFLO-2D, ARGUS, HY-8, HEC-RAS, HEC-1, PeakFQ, HEC-HMS, ArcView, ArcInfo, GeoRAS, 3D Analyst, DDMSW, and multiple Army Corps of Engineer Levee System Tools.

NATHAN FORD, PE

Role: Drainage Studies
Experience: 22 years **Availability:** 20%

Nathan has dedicated his entire career to the flood control practice and is a recognized leader in his field. He is a technical expert in performing storm water management and engineering design that includes hydrologic and hydraulic analysis, creating HEC-1 and HEC-RAS models, master drainage planning, floodplain delineation, detention and retention basin design, and preparation of construction plans. Nathan's specialized qualifications include designing drainage systems and performing hydrologic and hydraulic analyses and utilizing FLO-2D software on numerous projects that involve following applicable agency guidelines.

FRANK GUZMAN, PE

Role: Design and Construction
Experience: 35 years **Availability:** 35%

Frank has held various positions with the NMDOT District 1 and the Texas Department of Transportation (TXDOT) El Paso District. While at the TXDOT, he was the district construction engineer and supervised the district's construction audit unit, local government unit, lab, and pavement unit. Frank was also the West Area engineer responsible for highway construction and maintenance operations on El Paso's West Side; major routes included I10, US 54, SL 375, and US 62/180.

While at NMDOT District 1, he was a project engineer, district bridge inspection engineer, district technical support engineer, district engineering support manager, and district engineer. As district engineer in Deming, New Mexico, Frank was responsible for highway operations for state and federal highways in Doña Ana, Hidalgo, Luna, Grant, Sierra, and Socorro Counties. He works very closely on project teams with Gabby and Clay providing specialized technical support and design oversight on projects such as the Jal Relief Route, the NM 31/ US 285 Intersection Realignment, the Eddy County SE Loop, the US 60 Location Study, and the Eddy County Carrasco.

MIKE SMEJKAL, PE, AAE, ENV SP

Role: Airport Design
Experience: 24 years **Availability:** 20%

Mike has spent more than two decades developing airports as an airport owner in his role as the VP of Engineering and Planning for Tucson Airport Authority in Arizona and as a consulting engineer. He has provided executive oversight and project management on large scale airfield infrastructure projects that required consensus building with FAA, Department of Defense, local jurisdictions, and project teams to deliver.

In his previous role as an airport executive, Mike developed a broad understanding in planning, programming, funding, grant administration, NEPA, real estate, design, and construction for commercial airports and general aviation. He has provided construction management on numerous airside and landside infrastructure projects for airports across the country.

MARK KOESTER, PE

Role: Airport Design
Experience: 45 years **Availability:** 20%

Mark's consulting experience includes serving as client manager, overseeing funding and regulatory agency reviews, and coordinating permitting and design. He has a passion for the development and expansion of airports and aviation-related facilities having worked on numerous challenging design and construction projects around the world. His experience includes the planning, design, and construction administration of all aspects of airport infrastructure, including runways, taxiways, aprons, airport terminals, hangars, and ARFF facilities, as well as roadways, storm water conveyance, utility, and fueling systems on airports.

Mark has extensive experience working with airport sponsors and contractors to successfully complete projects in congested Air Operations Areas (AOAs). He has a full knowledge of FAA regulations, programs, policies, and requirements. Mark has been responsible for nearly $1.5 billion worth of improvements at over 30 airports in the United States, Canada, South Pacific, and the Caribbean.

GEOTECHNICAL ASSESSMENTS

Stantec will subcontract a local geotechnical engineering firm when necessary for design. We typically team with Western Technologies but will work with whichever firm you prefer.

EXPERT WITNESSES

We have multiple experts in all of the engineering specialty disciplines who have the expertise needed to be a technical witness in a judicial setting. Our entire team is at your disposal.

B. PRINCIPAL OF FIRM AND SUBCONSULTANTS

Principal of Firm:
Gabby C-Apodaca, PE, Principal-in-Charge
3831 E Lohman Ave., Suite 200
Las Cruces, NM 88001

NM 15 RECONSTRUCTION | SILVER CITY, NM

NEW MEXICO DEPT. OF TRANSPORTATION

NM 15 was a narrow two-lane, 1.21-mile urban roadway a without shoulders that was reconstructed in two segments. We performed environmental documentation studies and completed a drainage study, roadway and drainage design, agency coordination, and property owner coordination.

The west segment (approximately 0.75 miles) was designed to have two driving lanes, shoulders, bike lanes, and sidewalks. This segment was challenging to design due to narrow ROW and steep side slopes accessing adjacent commercial and residential property. Extensive ROW takes and temporary construction permits were required. The northeast segment (approximately 0.36 miles) was constructed as an urban section with two driving lanes, a center turning lane, bike lanes, and sidewalks. Drainage included construction of a storm sewer system through an old part of Silver City with extensive underground utilities. We coordinated very closely with four affected utility owners to avoid conflicts and minimize adjustments. The project also included reconfiguration of two intersections, one of which was previously five-legged.

NRD/SRD ENGINEERING ON-CALL

NEW MEXICO DEPT. OF TRANSPORTATION

Stantec is providing professional services to NRD and SRD under an existing on-call contract (2021-present). We have performed the following tasks:

- Task 1. I-25 N. Springer Interchange Bridge 299 and Roadway CN 4101670
- Task 2. Speed Declaration Study, Pecos, NM
- Task 3. Additional Services Alternatives development and analysis for CN 4101670 Springer Bridge and Roadway
- Task 4. Town of Hurley Fresh Water Line Relocation Design
- Task 5. CN 2104670 NM 200 Phase III Bidding and Construction Support Services Continuation from expired on-call
- Task 6. Town of Hurley Fresh Water Line Easement Services
- Task 7. CN 2104490 US 285/NM 31 PSE2 and Production Services

We also provided roadway alternatives analysis and roadway design services for a $10M Bridge Reconstruction project in Springer for I-25 at Exit 414. A 60% design review meeting was held on October 6, 2023. The team is progressing towards 90%, PSE, and final plan production.

JAL RELIEF ROUTE PHASE IA/B/C/D AND PHASE II

CITY OF JAL

A truck relief route is needed to alleviate congestion and crashes in Lea County. The City of Jal faced a difficult situation as heavy truck traffic, crashes, and fatalities have increased across the county. Within the downtown area, congestion was rated as an F at two intersections with NM 128 and traffic times had increased dramatically. Without mitigation, congestion and the level of service were expected to worsen as Jal's rapid growth pushed roads to their limit.

The protection of the City's residents guided the urgent need for a truck relief route study and its subsequent construction.

Our team completed the route study, looking for a way to alleviate the City's issues. As a no-build alternative, we identified corridors that could route traffic on NM 128 around the downtown areas. We also examined various corridors that could be utilized with a build option, including two possible corridor connections. One such consideration was the Texas and New Mexico railway and roadway crossing that backed up traffic when trains came through. Our team coordinated with TXN Railroad to identify a new crossing area that would negate the backup. While the project is still ongoing, it has encompassed the NEPA process, federal guidelines, and NMDOT standards. The final alignment was significantly affected by:

1. An extensive archaeological site that was discovered during the archaeological field investigation,
2. Several sink holes within the area,
3. Substantial public and stakeholder input, and
4. The amount of anticipated traffic diversion.

A final alignment was selected and Stantec is currently completing 90% plans and beginning the right-of-way acquisition process.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Wilson & Company, Inc., Engineers & Architects, of 414 N. Main St, Ste A, Las Cruces, NM, 88001, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
Civil Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-050, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Wilson & Company, Inc., Engineers & Architects 414 N. Main St, Ste A Las Cruces, NM 88001 ATTENTION: Edward Cordova

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A

SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineer to prepare items such as preliminary and final cost estimates, schedule/timelines, complete project plans and specifications, project reports, and other related engineering services. The awarded Engineers shall provide Civil Engineering Services that may include, but not be limited to, the following:
1. The design of transportation facilities, storm drain, utilities, site development, conducting all necessary investigations/studies, subsurface utility exploration, construction contract administration, land surveying activities, the preparation of drainage reports and FEMA flood studies, and the design of airport facilities (design of airport facilities will be paid with non-federal funding)
2. Expert witness in a judicial and/or quasi-judicial setting
3. Project Management
4. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any
    d. Cost of sub-consultants (if any)
3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline, and cost. The Engineer may be required to supply to the City any of the following items, when specified and as requested on the Scope of Work for each individual project:
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.

a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
   - Name, address, and phone number of the responsible land surveyor.
   - Date of completion of survey.
   - Equipment used to conduct the survey.
   - Horizontal and vertical control marks used to tie the survey to the City approved control.
   - Transformation factors needed to reduce Ground (local coordinate system) to Grid, and combined scale factor used.

b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.

3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

Re: RFP # 23-24-050, Civil Engineering Services

Dear Selection Committee Members,

The City of Las Cruces (City) provides a critical service to the community by maintaining and improving its infrastructure to enhance safety and support growth. Wilson & Company, Inc., Engineers & Architects (Wilson & Company) is a multidisciplinary professional consulting firm prepared to commit the expertise of our experienced staff to assist the City with the project assignments that will be issued through this on-call services contract. Our local team and leadership is intimately familiar with the City's infrastructure, staff, policies, and procedures. We will focus on collaboration, building on our strong relationship to meet your short- and long-term goals. We will remain dedicated to delivering successful projects by:

Employing the same team that knows your processes and procedures. Our unmatched knowledge from prior City contracts like the East Mesa Recreation Complex, various roadway and drainage-related tasks, and traffic assignments under previous on-call services contracts minimizes delays and readies this team for action. Since 2014, our Las Cruces office has grown to over 30 employees and is supported by 212 employees statewide. Our strategic partners, CSTi (subsurface utility engineering [SUE]) and DuBois & King (airport facilities services), have local experience and are eager to provide the specialized services as needed.

Developing engaging, design-innovative concepts while meeting your on-call objectives. Our staff brings performance-based solutions to a growing community. Our team has assisted numerous New Mexico communities with on-call engineering services like pedestrian studies, traffic calming design, and public involvement. Our team's on-call experience reflects many years of dedicated technical know-how to address your infrastructure challenges while providing efficient solutions to optimize your budget. Our roadway and drainage engineers, surveyors, environmental scientists, and construction administration professionals have the experience to control costs and initiate early coordination efforts to prevent delays.

Our local office, only minutes from City Hall on Main Street, enables our team to continue fostering our partnership with the City, contributing to improving your infrastructure with our knowledge, experience, and enthusiasm for collaboration. We have provided many services to the City over the past decades and will continue to support your goals. We look forward to another partnership with the City under this contract. We hope that the information we provided has helped you to see why our team is the best fit for the on-call contract. If additional information is required, please reach out to me at 505 259 7259 or edward.cordova@wilsonco.com.

Sincerely,

Edward Cordova, PE
Senior Vice President, Principal-in-Charge

Brigitte Fuller, PE
Program Manager

Firm commitment

Wilson & Company is committed to providing excellence in client services. Higher Relationships is the foundation of this commitment. Our focus is on continuously improving services to our clients, building relationships with community stakeholders, providing quality deliverables, and understanding our clients' needs. Our experience is important, but what matters most is your experience. That is why we focus on your specific needs to deliver professional services with Higher Relationships in mind.

Like many communities across New Mexico, the City continues to balance the needs of an ever-expanding community while maintaining its current infrastructure—aging roadways and traffic equipment, bridges and wall structures, utility systems, and drainage conveyance with limited funding sources and budget. Wilson & Company understands this challenge and has been serving the City for many years, leading us to open an office on Main Street in 2014 to increase our level of service.

Organizational structure

Wilson & Company is headquartered in Albuquerque, New Mexico, and has brought more than 700 people together in 15 offices over nine states to hone their craft with us. Our services include civil, mechanical, electrical, and structural engineering; architecture; planning; environmental; surveying; mapping; GIS specializations; drone piloting; financial analyses; program management; construction administration and observation; and a growing number of multidisciplinary specialties.

With over 200 employees in New Mexico and our local office only minutes from the City's office, we can be on your doorstep quickly to address your on-call needs.

91 years in business

Criteria 1

Technical approach

Program manager Brigitte Fuller, PE, will serve as the main point of contact for the City. Brigitte will work closely with the Public Works Director and design staff and be available to the City's executive team to review priorities, including technical and non-technical support. During visits, Brigitte will be available to meet with staff to discuss various topics and projects, which can be further investigated as needed. She will include additional Wilson & Company staff at these meetings so coordination with the proper team members can occur.

For every project assignment, Brigitte will prepare a detailed scope of work and fee estimate. She will work with the appropriate technical staff to verify the assignment is adequately addressed and develop a project proposal. Our team will work with the City to develop a project assignment proposal that confirms

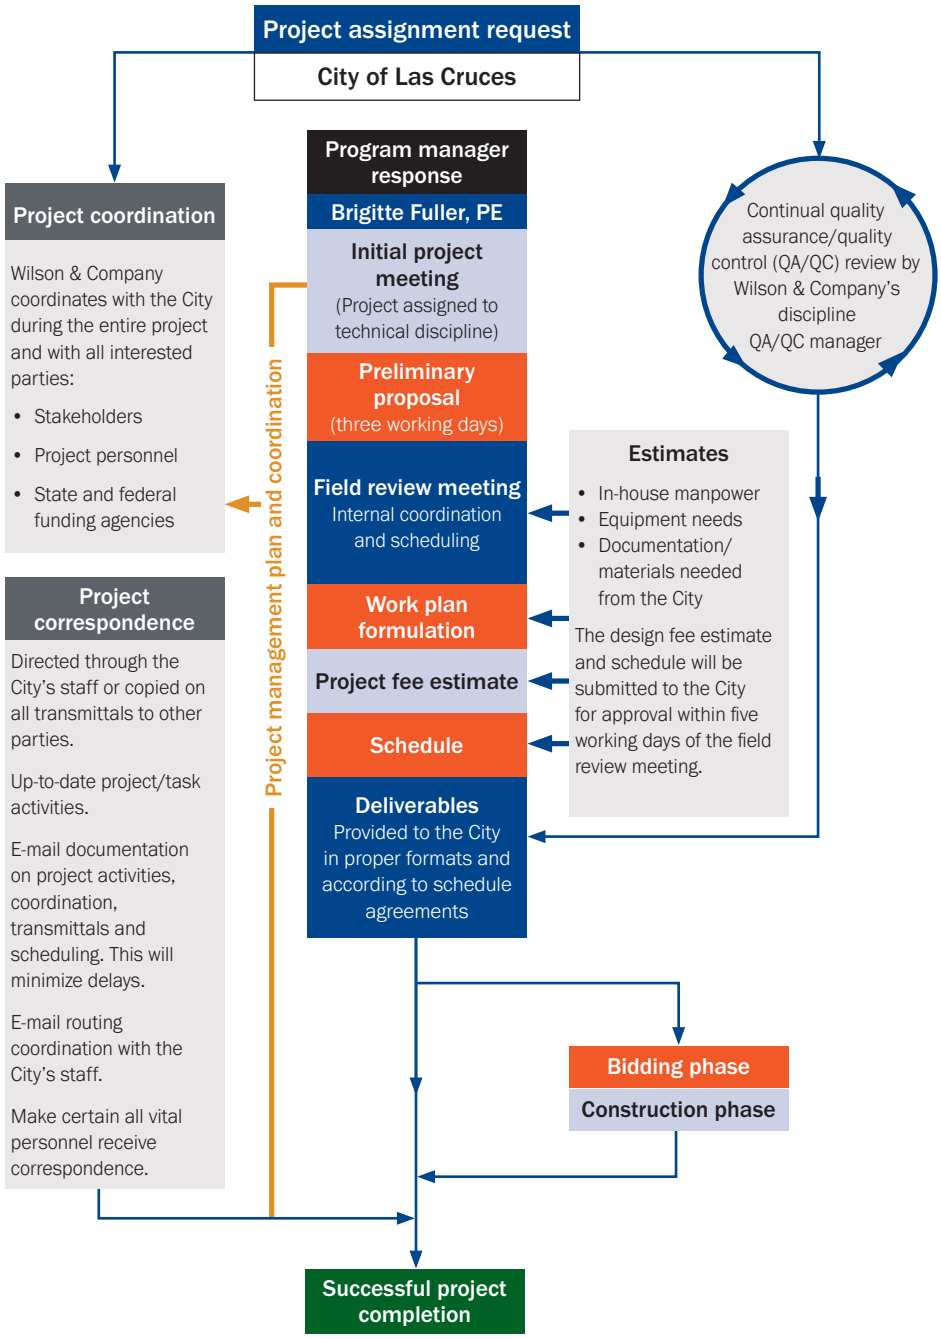
both parties understand the work involved and are aligned with the project expectations and outcomes. Project assignments will be presented to the City Council for acceptance where required by the City Manager.

Upon acceptance of a project assignment proposal, Brigitte will work directly with the City to execute the assignment and move towards a Notice to Proceed (NTP).

Following acceptance of the project assignment proposal, our team will hold an initial project meeting with internal team members. The goal of the meeting is to communicate the schedule and establish critical milestones and submittal dates (field check, office check, final completion, etc.). During this meeting, our team will define the sources of available project data, which may require field survey, data collection, or geotechnical services. Our team will discuss the governing design criteria and design issues to make sure all parties are aware of the concerns that could be encountered. Brigitte will work the key task lead to develop a Project Management Plan (PMP) for the project team. The PMP is essential in our process to confirm budget and schedule requirements are met and to comply with our internal Quality Assurance Program.

A PMP will be developed for every project. The plan is Wilson & Company's project guide detailing critical project elements and communication protocols. Milestones and team responsibilities are clearly defined.

Figure 1. Wilson & Company's on-call process



Focusing on you

Through our work under the 2020-2024 on-call contract, our team developed strong relationships with City staff and gained intimate knowledge of your processes and standards. We know your expectations and strive to exceed them, from schedule and budget to sustainable and innovative concepts.

Major tasks to be accomplished and a detailed statement of services to be provided under each task

Successfully performing services under an on-call contract requires a team that is invested and committed to meeting your goals. Our dedicated and consistent team offers familiarity with City staff and your processes and provides expert services to reach your objectives. We offer the following services as identified in the RFP.

Transportation facilities: Our team has extensive experience with the design of rural and urban roadways ranging from local residential streets to major urban arterials. Our experience spans from initial alignment alternative analysis to preliminary and final design and construction administration. Critical elements considered in roadway design are horizontal and vertical alignments, drainage mitigation and improvements, lane capacity requirements and configuration, queuing analysis for turn lane need determination, signalized intersection modeling and design, lighting, temporary traffic control, permanent signing and striping, and right-of-way (ROW) requirements. **Under recent on-call contracts, Wilson & Company assisted the City with Sonoma Springs Extension and Camino Coyote roadway projects.** Our transportation services include:

- Parking lot planning and design
- Traffic impact analysis/roadside safety audits
- Sidewalk and multi-use trail planning and design
- Existing ROW determination and new ROW mapping
- New Mexico Department of Transportation (NMDOT) federal and state funding implementation, management, and oversight

Video-based camera attached to the road sign during count enables our team to capture and assess road user behaviors.

Our team is fully capable to assist the City with traffic design support. Wilson & Company has in-house hardware capabilities to perform vehicle turning movement counts and tube counts on intersections and roadways for traffic impact analyses (TIAs), safety studies, and intersection analyses. Our professionals are adept in software such as HCS, TransModeler, VISTRO, VISSIM, Synchro, and SimTraffic for intersection analysis and simulation; SIDRA and RODEL for roundabout evaluations; and PetraPro and STARnext for traffic data collection. We are invested in video-based counting equipment that enables us to collect up to 150 hours of continuous data. Since the first Traffic Engineering On-call award in 2014, Wilson & Company has provided traffic assessments, design, and reviews for the City. Recent completed studies include Mulberry Traffic Calming Study and Golf Club Road Safety Study.

We completed studies like the Sonoma Ranch Safety Study, the Missouri Avenue Traffic Study, the Jornada Road Study, and performed various TIA reviews for the City.

Storm drain, drainage reports, and Federal Emergency Management Agency (FEMA): Wilson & Company offers an experienced surface hydrology/hydraulic (H&H) group that has provided individual drainage mitigation solutions for flood control authorities, cities, and counties throughout the Southwest. In addition to the City of Las Cruces, we have assisted clients such as Doña Ana County Flood Control, and various other flood control authorities in central New Mexico.

We can assist with levee certification, FEMA applications, project restoration and mitigation, development review, and infrastructure planning. We use the latest software tools to assess drainage conditions and develop sensible solutions for drainage mitigation. Our in-house expertise also provides National Pollutant and Discharge Elimination Systems (NPDES) services. As development continues, our team is committed to making sure the quality of life and safety of the citizens of Las Cruces are protected. Other relevant services include:

- FEMA flood map revisions and coordination
- Urban storm drainage master planning
- Storm drainage infrastructure design
- Levee assessments and design (FEMA and US Army Corp of Engineers)

Our drainage team completed the following projects for the City:

- Burn Lake Letter of Map Revision (LOMR)
- Mesquite Tornillo Drainage Planning
- McClure Pond Improvements

Utilities: Communities depend on infrastructure to support essential services. Our experts and support staff are experienced in utility design for all dry and wet utilities, including gas, electric, cable, fiber optic, water, storm sewer, and sanitary sewer. We embrace sustainable design concepts, especially reuse and recharge, and many of our past projects incorporate recycled and environmentally friendly materials. Our team has experience in the design and construction administration of utility system improvement projects. Wilson & Company offers a full spectrum of engineering services related to water, wastewater, and reuse for a diverse group of public and private clients. Our experienced and dynamic professionals are committed to providing clients with quality, full-service engineering solutions, and our in-house expertise is valuable when planning full roadway reconstruction and mitigating utility conflicts or relocation.

Site development: Wilson & Company has extensive experience in site development. We facilitate the site development approval process for obtaining construction permits by interacting with planning and zoning committees in numerous municipalities in New Mexico. In the review process, we help draft optimal site development agreements and clarify the easements and covenants governing the property. Our site development team offers services in these areas:

- Due diligence
- Residential and commercial master planning
- Development agreement assistance
- Public infrastructure coordination
- Grading and drainage
- Utility plans
- Revised platting
- Annexation
- Public meetings

We have experience mitigating issues involving annexation, rezoning, general map amendments, variances, special use permits, revisions to plats, and public infrastructure improvements.

SUE: Wilson & Company has partnered with CSTi on numerous projects across the state. As a trusted partner, CSTi will provide SUE services on City projects under this on-call. CSTi understands the critical importance of accurate utility information in construction and infrastructure projects. A team of experienced professionals assist in mitigating risks associated with unidentified or poorly located utilities. CSTi

delivers reliable and precise SUE services to support project success. CSTi offers utility research, records analysis, field investigations, surveying, and utility mapping. Staff offers expertise to handle projects of any scale, providing accurate and detailed information about underground utilities.

Construction contract administration: Our construction administration and observation team is well versed in construction documents, including the Engineers Joint Contract Documents Committee (EJCDC), American Institute of Architects (AIA), Community Development Block Grant (CDBG), NMDOT Standard Specifications for Highway and Bridge Construction, New Mexico American Public Works Association (APWA) Specifications for Public Works Construction, Uniform Building Code, International Building Code, Uniform Plumbing Code, Occupational Safety and Health Administration (OSHA), Environmental Protection Agency, and Stormwater Pollution Prevention Plan (SWPPP).

Wilson & Company has over 20 years of experience assisting New Mexico clients with funding and grant administration through the close-out of construction activities. Our funding specialists assist clients in preparing grant/loan applications for state, federal, and private sources and will work closely with the project team and funding agencies to make sure that appropriate documentation is filed throughout the planning, design, and construction phases.

Land surveying: Many of our survey staff have lived and practiced in New Mexico for most of their lives. We are familiar with the terrain, climate, topography, geography, geodetic control systems, public land system, State Plane Coordinate System, statutes, laws, and regulations. Our fully equipped survey crews are outfitted with the latest technology to handle all terrain and weather conditions.

Local survey teams have specialized experience and technical competence in a wide range of surveying and related services, including boundary/cadastral surveys, ROW and topographic surveys, alignment/utility location surveys, terrestrial lidar surveys, horizontal and vertical site control analysis, cross-section and profile surveys, legal boundary and plan and profile surveys, bathymetric and hydrographic surveys, geodetic network control surveys, construction layout and staking, rapid response emergency surveys, photogrammetric mapping control and aerial mapping, American Land Title, GPS surveys, digital terrain modeling, and subdivision plats.

Project management: One of Wilson & Company's most important goals is to maintain cost control throughout our projects. Factors in achieving this goal are time management and clear communication between our team members and the City.

- We make efficient use of kickoff and regular production meetings.
- We create scoping documents that provide the framework for a sound, thorough, and comprehensive project that reflects the City's needs and concerns.
- Using our internal PMP, we carefully manage schedules and costs by maintaining a detailed task order schedule and continuously reviewing scheduled milestones.

Did you know?

Quality management procedures are employed on every project

- Accurate data is used throughout the collection and analysis process
- Work completed during each task is executed by experienced professionals
- Essential information is documented, checked, transmitted, and regularly reviewed for completeness and accuracy
- Project design deliverables and studies are checked and reviewed by qualified internal staff

Quality and value produce successful results

This team has a long history of working within the City's project administration requirements. Program manager Brigitte Fuller will provide direction and leadership, producing streamlined results, quality deliverables, and value to your on-call tasks.

We are aware that public funds are limited and must be allocated wisely. Wilson & Company brings value to all public agency partners by adhering to a detailed PMP that provides efficiency, accuracy, cost-effectiveness, and quality control.

Construction observation: Our experienced construction observers work closely with the design team to verify the constructed project is built per the drawings and technical specifications. Our specifications detail start-up procedures, documentation, and training for primary mechanical systems. Full mechanical system commissioning is an option that can alleviate many functional issues in the future. During the start-up and training phase, we work closely with the equipment manufacturer's representatives and the City's staff to make sure mechanical facilities are working properly.

Our observers are certified by the National Institute for Certification in Engineering Technologies (NICET) and the American Concrete Institute (ACI). Observers are also certified to operate nuclear densometers and regularly attend courses at the Associated Contractors of New Mexico (ACNM) facility in Albuquerque and attend other local and regional training.

Project schedule/timeline

Our project schedule is the cornerstone of our project management strategy. We've created a sample schedule demonstrating our commitment to achieving each project milestone. The project milestones are the building blocks of our internal project timeline, which will be a tool to track our progress. This timeline will sequentially outline the tasks to move from one milestone to the next. Our internal timeline will be realistic and adjustable to meet the scope of work and the City's needs, reflecting our commitment to your schedule, which directly correlates to your budget.

Wilson & Company's succesfull on-call contract record with the City demonstrates our commitment to your program. We understand that projects may arise where immediate attention is required due to a safety issue or concern for protecting life and property, and we stand prepared to assist with the right team.

Guy's airport experience includes serving as a project manager and airport planner, in responsible charge of scheduling, budgeting, and client coordination. He has managed planning, design, permitting, bidding, and construction with FAA discretionary funding. He has conducted airport facilities needs analyses, terminal building feasibility studies, commercial air service development plans, and airport security plans.

Experience:

- Airport Planning Services for Las Cruces International Airport, Las Cruces, NM
- FBO and Hangar Lease Agreement Review/Runway Length Analysis and Technical Master Plan Update/Environmental Assessment for Runway and Taxiway Extensions and Town Highway Relocation, Stephen A. Bean Municipal Airport, Rangeley, ME

Criteria 3

Performance of the firm

The following projects showcase our experience delivering successful solutions for various projects. Through these projects, we have gained critical insight that can be applied to your on-call tasks, resulting in similar successes. We invite you to make inquiries of the provided references regarding our qualifications, performance, and quality of results.

1 Roosevelt Avenue Concrete Box Culvert (CBC) Bridge Replacement and Arroyo Multiuse Trail Crossing
Grants, New Mexico

In April 2011, Wilson & Company completed a Drainage Master Plan (DMP) for the City of Grants and Village of Milan. This document served as the primary flood control planning document for the several projects anticipated for the municipalities, including the City's current Bio-Park Economic Development Plan (EDP).

The City of Grants then authorized Wilson & Company to prepare a Preliminary Engineering Report (PER) for the Roosevelt Avenue Bridge with $50,000 supplemental funding from the Rio San Jose Flood Control District (RSJFC). The City and RSJFC were interested in planning and designing the replacement of the Grants Canyon Arroyo crossing under Roosevelt Avenue. The team completed the PER in February 2021, including recommendations for the new crossing and trail underpass connection.

Engineering design services for the proposed concrete box culvert (CBC) were approved following the completion of the PER. Wilson & Company assisted the City in successfully applying for state Municipal Arterial Program (MAP) funding for design. The Roosevelt Bridge project included ground topographic survey, subsurface utilities engineering, environmental documentation, Public Involvement, and federal approval from the Bureau of Land Management (BLM). The CBC will serve as a multipurpose trail crossing that connects regional trail facilities and the at-grade sidewalks on Roosevelt Avenue. In addition to the CBC design, Wilson & Company prepared roadway design plans, roadway lighting, utility relocation, and erosion control plans, all for approval by NMDOT District 6. The City of Grants was awarded funding through the State Road Fund to construct the project, which began in 2023. Wilson & Company has provided construction administration and observation services and support for state grant compliance. Construction of the project is scheduled for completion in Spring 2024.

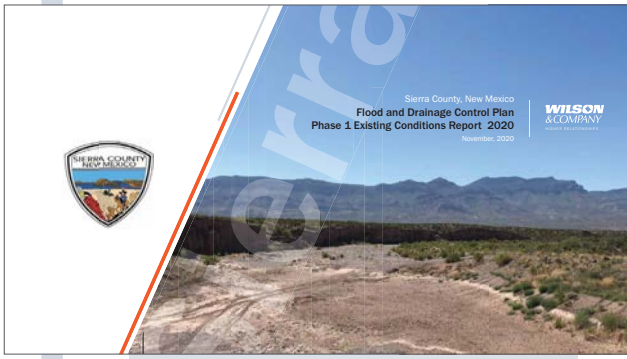
2 Flood and Drainage Report Phase I - Existing Conditions Report and Phase 2 - Proposed Alternatives Report Sierra County, New Mexico



Sierra County has been subject to recurring flood events, damaging public and private infrastructure. Many of the existing drainage structures are undersized and are unable to convey the required stormwater runoff, causing county roadways to become impassable during rainfall events. This results in unreliable and perilous transportation that isolates communities from emergency responders.

In the fall of 2019, Wilson & Company was contracted by Sierra County to prepare a Flood and Drainage Control Plan (FDCP). The FDCP is a county-wide study that also encompasses six major watercourses and subject basins that were analyzed on a comprehensive level. The watercourses were identified and selected based on flooding severity, risk potential, the population affected, and the areas with the most concern based on information from residents, agencies, and local officials. Additionally, we developed a floodplain management section as a standalone document for use by Sierra County and the Floodplain Manager.

The primary goal of this FDCP was to identify significant and beneficial drainage improvement projects and provide the technical documentation needed to support the implementation of the final design, construction, and development of future funding grant applications.

3 On-call Professional Design Services City of Santa Fe, New Mexico

For over two decades, Wilson & Company has provided on-call engineering and project-specific services to the City of Santa Fe. We have supported the city with planning, survey and ROW, engineering and architectural services, and construction phase services. Our partnership with the city of Santa Fe has allowed us to work with several departments within the city, aiding in its growth and development and assisting in redeveloping historical areas. Wilson & Company staff have worked closely with city project staff and administration to ensure projects are supported by the public and successfully constructed. Numerous public engagement activities and meetings with the Bicycle and Trail Advisory Committee, the Historic Preservation Board, and the Mayor's Committee on Disability have been key to the success of several significant city projects. More recently, Wilson & Company has assisted the City with the projects below, similar to your on-call needs:

Southside Teen Center Facility Design: The new 17,000-square foot multipurpose facility supports programs targeted at youth and families within the Tierra Contenta community. The building, designed by Wilson & Company Architects, contains a main entry with controlled access, a raised platform and projection screen for theater, music, and video presentations, a large multipurpose gym space, and a large game room with vaulted ceilings and natural lighting.

Site development included drainage analysis for developing drainage mitigation recommendations, design for the extension of utility services for the new building, parking lot design, and ADA compliance. Design for the new site required close coordination with the Land Use Department for permitting and compliance with City development standards.

Services;
Site development
Utilities
Construction contract administration
Land surveying
Drainage report
Project management
Construction observation

Guadalupe Street Reconstruction: The project included design improvements for safety, multimodal accessibility facilities, and driveway access control to the Guadalupe Street corridor from Agua Fria Street to Paseo de Peralta. Guadalupe Street was primarily a 4-lane street through a commercial area with inadequate turning lanes and narrow, raised medians. The existing pedestrian facilities did not meet ADA standards, and bicyclists were forced to share the road with vehicles. Furthermore, the project is located within a Historic Preservation District.

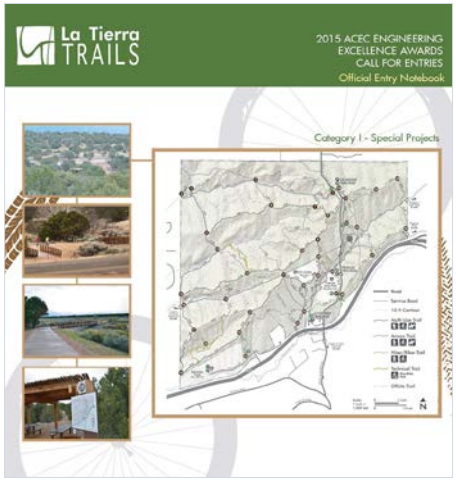
Wilson & Company worked with the City, corridor stakeholders, and the community to develop a multimodal vision for the corridor, including a road diet, enhanced bicycle and pedestrian accommodations, street furniture, lighting enhancements, and drainage improvements. The project is in construction and supported by Wilson & Company observers and construction administration staff.

Services;
Transportation facility
Storm drain
Conducted all investigations/studies
Land survey
Construction contract administration
Project management
Construction observation

La Tierra Trails: La Tierra Trails offers a unique addition to the City of Santa Fe's already diverse and sought-after outdoor recreational opportunities. Located on 1,500 acres within the city limits, the 25+ miles of recreational trails allow for a wide diversity of users ranging from hiker/dog-walker/trail-runner, mountain biker, and equestrian to BMX/freerider. This project helped place Santa Fe and New Mexico in a national spotlight for mountain biking. In October 2012, Santa Fe hosted the International Mountain Biking Association World Summit, which brought individuals worldwide. La Tierra Trails has won numerous local awards, including the New Mexico Society of Professional Engineers and American Council of Engineers.

Project design elements included:

- 3 New trailheads with paved parking
- 2 pedestrian bridges
- Picnic areas
- Several low water crossings
- Drainage improvements
- Water system additions
- GPS Trail mapping



Services;
Transportation facility
Utility design
Site development
Storm drain
Conducted all investigations/studies
Land survey
Drainage report and FEMA study
Construction contract administration
Project management
Construction observation

As noted below, Wilson & Company has significant experience managing on-call contracts for many clients throughout New Mexico. Our team completed numerous task orders ranging from a few hundred dollars to multimillion-dollar, multidisciplined task orders. In addition, we provide statewide on-call engineering services that further demonstrate our familiarity with other agencies that may require additional coordination with the City, illustrating our capacity and capability to deliver multiple tasks concurrently.

Title: **A RESOLUTION TO AWARD PROFESSIONAL SERVICES CONTRACTS FOR GENERAL ENGINEERING SERVICES ON AN AS-NEEDED BASIS TO BOHANNAN HUSTON, INC.; COBB, FENDLEY & ASSOCIATES, INC.; DANIEL B. STEPHENS & ASSOCIATES, INC.; HDR ENGINEERING, INC.; JOHNSON, MIRMIRAN, & THOMPSON, INC.; KIMLEY-HORN AND ASSOCIATES, INC.; MOLZEN CORBIN AND ASSOCIATES; PARKHILL, SMITH & COOPER, INC.; MILLER ENGINEERS, INC. DBA SOUDER, MILLER & ASSOCIATES; STANTEC CONSULTING SERVICES, INC.; TERRACON CONSULTANTS, INC.; WATER WORKS ENGINEERS, LLC; WILSON & COMPANY, INC., ENGINEERS & ARCHITECTS; AND ZIA ENGINEERING & ENVIRONMENTAL CONSULTANTS, INC., IN AN ANNUAL NOT-TO-EXCEED AMOUNT OF $2,000,000 EACH, FOR A PERIOD OF FIVE (5) YEARS, SUBJECT TO APPROVED BUDGET APPROPRIATIONS (PROCUREMENT NO. 23-24-051).**

TYPE OF ACTION: **☒ Administrative** **☐ Legislative** **☐ Quasi-Judicial**

PURPOSE(S) OF ACTION:

To award contracts for General Engineering Services.

BACKGROUND / KEY ISSUES / CONTRIBUTING FACTORS:

The City of Las Cruces (City) required proposals for general engineering services. These services are required to perform engineering services that may include, but not be limited to master planning; structural design on buildings, retaining walls, etc.; roadway, transportation, and parking lot design; site development; electrical design; computer network analysis for GAS, Water, and Wastewater; Supervisory Control of Data Acquisition design; mechanical, gas system, plumbing, and HVAC design; water, wastewater, and natural gas utility system design and analysis; traffic impact and transportation modeling studies; photometrics/street lighting design; drainage studies (including FEMA flood control); storm drainage; solid waste studies, and landfill system design and analysis; environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services; geotechnical assessments, such as soil and groundwater testing for contamination and remediation and other related services; expert witness in judicial and/or quasi-judicial settings; project management; and construction inspection.

On February 2, 2024, the City advertised Request for Proposals for Procurement No. 23-24-051, for the purpose of pre-qualifying firms that can provide these specialized engineering services, and entering into agreements with recommended firms. These proposed agreements will be used on an as-needed basis for a period of five (5) years, subject to approved budget appropriations.

The Purchasing program received fourteen (14) proposals that were evaluated and scored by the Selection Advisory Committee (SAC) on April 10, 2024. The SAC is recommending award to all fourteen (14) rated firms as follows:

1. Bohannan Huston, Inc. - Las Cruces, New Mexico
2. Cobb, Fendley & Associates, Inc. - Albuquerque, New Mexico
3. Daniel B. Stephens & Associates, Inc. - Albuquerque, New Mexico
4. HDR Engineering, Inc. - Omaha, Nebraska
5. Johnson, Mirmiran, & Thompson, Inc. - Hunt Valley, Maryland
6. Kimley-Horn and Associates, Inc. - Mesa, Arizona
7. Molzen Corbin and Associates - Las Cruces, New Mexico
8. Parkhill, Smith & Cooper, Inc. - Albuquerque, New Mexico
9. Miller Engineers, Inc. dba Souder, Miller & Associates - Las Cruces, New Mexico
10. Stantec Consulting Services, Inc. - Las Cruces, New Mexico
11. Terracon Consultants, Inc. - Las Cruces, New Mexico
12. Water Works Engineers, LLC - Las Cruces, New Mexico
13. Wilson & Company, Inc., Engineers & Architects - Las Cruces, New Mexico
14. Zia Engineering & Environmental Consultants, LLC - Las Cruces, New Mexico

It is advantageous for the City to have a pre-qualified list of engineers from which to select, to get budgeted projects completed. All City departments will be able to enter into individual Project Assignment Agreements with these engineering firms on an as-needed basis. The Public Works Department has numerous projects budgeted throughout upcoming fiscal years. There are also times when special funding (e.g. Legislative appropriations, New Mexico Department of Transportation, etc.) is made available to the City for specific projects. The funding sources often give strict timeframes within which improvements must be designed and constructed to secure the funding. By having a pre-qualified list of engineers, it will not be necessary to go through individual Request for Proposals to contract the necessary work for each individual project. These agreements will allow Public Works, and any other department needing these services, to contract with any one of the fourteen (14) pre-qualified firms. As a result, valuable time is saved in the design of each project and staff time can be used on other projects and in other capacities.

DOES THIS AMEND THE BUDGET?:

☐ Yes

☒ No

Does this action amend the Capital Improvement Plan (CIP)?

☐ Yes

☒ No

Does this action align with Elevate Las Cruces?

☐ Yes

☒ No

OPTIONS / ALTERNATIVES:

1. Vote "Yes"; this will approve the Resolution and award contracts to the fourteen (14) selected pre-qualified firms, to provide general engineering services for the City on an as-needed basis, to each firm for a term of five (5) years, subject to approved budget appropriations.
2. Vote "No"; this will not approve the Resolution, and City Council will need to provide staff with alternate direction.
3. Vote to "Amend"; this could modify the Resolution based on City Council direction to staff.
4. Vote to "Table"; this could delay awarding contracts for general engineering services and prevent completion of budgeted projects.

RESOLUTION 24-116

A RESOLUTION TO AWARD PROFESSIONAL SERVICES CONTRACTS FOR GENERAL ENGINEERING SERVICES ON AN AS-NEEDED BASIS TO BOHANNAN HUSTON, INC.; COBB, FENDLEY & ASSOCIATES, INC.; DANIEL B. STEPHENS & ASSOCIATES, INC.; HDR ENGINEERING, INC.; JOHNSON, MIRMIRAN, & THOMPSON, INC.; KIMLEY-HORN AND ASSOCIATES, INC.; MOLZEN CORBIN AND ASSOCIATES; PARKHILL, SMITH & COOPER, INC.; MILLER ENGINEERS, INC. DBA SOUDER, MILLER & ASSOCIATES; STANTEC CONSULTING SERVICES, INC.; TERRACON CONSULTANTS, INC.; WATER WORKS ENGINEERS, LLC; WILSON & COMPANY, INC., ENGINEERS & ARCHITECTS; AND ZIA ENGINEERING & ENVIRONMENTAL CONSULTANTS, INC., IN AN ANNUAL NOT-TO-EXCEED AMOUNT OF $2,000,000 EACH, FOR A PERIOD OF FIVE (5) YEARS, SUBJECT TO APPROVED BUDGET APPROPRIATIONS (PROCUREMENT NO. 23-24-051).

The City Council is informed that:

WHEREAS, the City of Las Cruces requested proposals for general engineering services; and

WHEREAS, these services are required to perform engineering services that may include, but not be limited to master planning; structural design on buildings, retaining walls, etc.; roadway, transportation, and parking lot design; site development; electrical design; computer network analysis for GAS, Water, and Wastewater; Supervisory Control of Data Acquisition design; mechanical, gas system, plumbing, and HVAC design; water, wastewater, and natural gas utility system design and analysis; traffic impact and transportation modeling studies; photometrics/street lighting design; drainage studies (including FEMA flood control); storm drainage; solid waste studies, and landfill system design and analysis; environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services; geotechnical assessments, such as soil and groundwater testing for contamination and remediation and other related services; expert witness in judicial and/or quasi-judicial settings; project management; and construction inspection; and

WHEREAS, the purpose is to establish a list of pre-qualifying firms that can provide these specialized engineering services; and

WHEREAS, these agreements will be used for five (5) years on an as-needed basis, subject to approved budget appropriations; and

WHEREAS, the Purchasing program received fourteen (14) proposals that were evaluated and scored by the Selection Advisory Committee (SAC) on April 10, 2024; and

WHEREAS, the SAC is recommending award to all fourteen (14) firms as follows: Bohannan Huston, Inc.; Cobb, Fendley & Associates, Inc.; Daniel B. Stephens & Associates, Inc.; HDR Engineering, Inc.; Johnson, Mirmiran, & Thompson, Inc.; Kimley-Horn and Associates, Inc.; Molzen Corbin and Associates; Parkhill, Smith & Cooper, Inc.; Miller Engineers, Inc. dba Souder, Miller & Associates; Stantec Consulting Services, Inc.; Terracon Consultants, Inc.; Water Works Engineers, LLC; Wilson & Company, Inc., Engineers & Architects; and Zia Engineering & Environmental Consultants, LLC.

NOW, THEREFORE, Be it Resolved by the Governing Body of the City of Las Cruces:

(I)

THAT the Professional Service Agreements for general engineering services are hereby awarded to Bohannan Huston, Inc.; Cobb, Fendley & Associates, Inc.; Daniel B. Stephens & Associates, Inc.; HDR Engineering, Inc.; Johnson, Mirmiran, & Thompson, Inc.; Kimley-Horn and Associates, Inc.; Molzen Corbin

and Associates; Parkhill, Smith & Cooper, Inc.; Miller Engineers, Inc. dba Souder, Miller & Associates; Stantec Consulting Services, Inc.; Terracon Consultants, Inc.; Water Works Engineers, LLC; Wilson & Company, Inc., Engineers & Architects; and Zia Engineering & Environmental Consultants, LLC, as shown in Exhibit "A" through "N", respectively, attached hereto and made part of this Resolution.

(II)

THATCity staff is hereby authorized to do all deeds as necessary in the accomplishment of the herein above.

EXHIBIT "A"

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Bohannan Huston, Inc., of 7500 Jefferson St. NE, Albuquerque, NM, 87109, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Bohannan Huston, Inc. 7500 Jefferson St. NE Albuquerque, NM 87109 ATTENTION: Matthew Thompson

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

ATTACHMENT C – COST PROPOSAL FORM RFP 23-24-051 – General Engineering Services
(NOTE: This form shall not to be modified in any way)

Consulting Firm Bohannan Huston

ITEM	DIRECT LABOR / CLASSIFICATION	HOURLY RATE*
1	Principal Engineer	$ 260 (E7)
2	Project Engineer/Project Manager	$ 205 (E5)
3	Senior Engineer	$ 180 (E4)
4	Design Engineer	$ 160 (E3)
5	Engineer Intern	$ 135 (E2)
6	Engineering Technician	$ 150 (ET7)
7	Drafting Technician	$ 110 (ET4)
8	Survey Crew**	$ 280+
9	Construction Inspector/Observer	$ 140 (CO6)
10	Administrative/Clerical	$ 100 (AP4)
11	Field Testing and Investigations	$ case-by-case basis
		PERCENT MARKUP
12	Subcontractor Cost Markup	(%) 5%
ITEM	**MATERIALS / REIMBURSABLE EXPENSES**	**RATE**
	Travel	
13	Per Diem (per day) – Pre-Approval Required	City of Las Cruces Rate
14	Vehicle Mileage Rate (per mile)	Current IRS Rate
	Reproduction Services	
15	Black and White Copies (per copy)	$ invoiced at cost
16	Color Copies (per copy)	$ invoiced at cost
17	Prints 24x36 (per sheet)	$ invoiced at cost
18	Mylars 24x36 (per sheet)	$ invoiced at cost
19	Photo Quality Plots (per plot)	$ invoiced at cost
	Miscellaneous	
20	Any other costs incurred	Case by Case Basis

**Rates are to include all overhead costs and any and all assessment expenses*

***Survey Crew Rates are to include GPS and Total Station Equipment*

Notes: 1. Detailed man hour Estimates are required for T&M contracts and are to utilize corresponding rates

2. Rates in place at the time a project is contracted with the City will remain for the duration of the contract.

City of Las Cruces
City Purchasing Bid Clerk
bidclerk@las-cruces.org

RE: City of Las Cruces Civil Engineering Services | RFP 23-24-051

Dear Members of the Selection Committee:

We recognize the City of Las Cruces is in search of a qualified consultant to provide general engineering services on an as-needed basis for large, multifaceted projects from start to finish. Bohannan Huston, Inc., (BHI) offers the City of Las Cruces a highly qualified New Mexico-based team that has the expertise, availability, and resources all under one roof. We offer innovative approaches and relevant experience to provide the City of Las Cruces with local talent for your planning and design consulting services.

BHI is a staple in New Mexico's full-service engineering and surveying service industry and has been developing projects in Las Cruces from concept through construction. We understand the unique needs and culture of the community and can respond accordingly with support from our parent office as necessary.

Factors that position BHI as the right choice for this on-call contract for the City of Las Cruces include:

Continued Service: As a current on-call engineer for the City of Las Cruces, BHI has the capability to continue providing qualified staff for all phases of a project – from planning and design to construction management. We have worked previously on projects of all scales with several departments within the City, from Public Works, to Parks and Recreation and Utilities, and have a respected reputation with all of them.

Roots: BHI is an established member of the Las Cruces business community with a long-term commitment to the betterment of our City. Our Las Cruces office is staffed by employees who have deep roots in southern New Mexico, many who have studied in the area and now have made Las Cruces their home. When we work for the City, we are working for our home.

Trusted Team: The City of Las Cruces can continue to rely on BHI staff to ensure that your needs for engineering services are taken care of at any time. Leading our team will be Matthew Thompson, PE, as Principal-in-Charge, Tyler Hopkins, PE, as Project Manager, and Diana Gomez as Assistant Project Manager. They fully understand the challenges that many local governments in the area face, especially with budget or schedule constraints. As a team, we are prepared to come alongside the City of Las Cruces and help find effective solutions.

A Successful History of Performance: Our Las Cruces office has been serving the City for nearly 30 years. BHI is committed to providing extraordinary service that improves the quality of life for New Mexico and our clients. We have a large pool of resources – including our teaming partners Epsilon Systems Solutions and COZ Engineering – with which to serve the City. This team of creative staff will be actively engaged in the pursuit of innovative, clear and concise, dependable solutions that meet your needs.

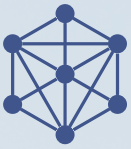
Thank you for the opportunity to submit this proposal for general engineering services. We are confident the City of Las Cruces will continue to find BHI has the right capabilities, people, experience, and approach to ensure that each project is a success.

Sincerely,

Matthew Thompson, PE
Senior Vice President

A. PROPOSED TECHNICAL APPROACH

Our multi-discipline structure allows BHI to provide end-to-end services, from planning and engineering studies to construction engineering on a variety of projects. Our approach ensures that we can assemble a highly qualified team – one that will leverage cutting-edge tools and techniques – to provide the right technological and cost-effective solution for each project. For any given task order, our general approach would be as follows:



RELY ON FIELD-SPECIFIC DATA We base our study and design efforts on actual field data. In almost all instances, actual conditions in the field predicate the design conditions and the implementation of the most feasible design solution. Our team members understand the value of field-specific data and will collect all relevant information, including surveying and sampling as necessary, for each project before analyses and solutions are developed.

INCORPORATE OPERATIONAL CONSIDERATIONS INTO THE DESIGN We value the operational and maintenance requirements of facilities and incorporate them into our designs. Designing facilities that are functional, effective, and operations-friendly is our goal.

APPLY QUALITY ASSURANCE/QUALITY CONTROL PRACTICES Quality of work is one of the core values at BHI. Fundamentally, the BHI team will refer to the BHI Quality Management System Policy Manual to govern the work being accomplished for City of Las Cruces projects. This manual provides the framework for the system of processes that govern our work. More specifically, BHI will use our tested and proven processes for design, project management, and construction management or administration to oversee the work performed under this contract. For each project, we develop a quality assurance/quality control (QA/QC) strategy that includes:

Staffing: Our QA begins with appropriate staffing, a strategy that ensures your project is performed by qualified personnel. Our team will begin with an internal review of the project scope, as defined during the kickoff meeting with your staff. The purpose of this review is to educate everyone involved on items such as project scope, deliverables, schedule, design criteria, team members and roles, and the project itself. Final plan documents are stamped, dated, and signed by the responsible New Mexico Registered Professional Engineer.

Schedule: The scheduling strategy includes milestones and scheduled inspections based on time frames established with the City. The team will hold weekly meetings to discuss project status and adjust staffing to meet your needs and schedules. Any changes that may impact the project will be communicated to you and will be documented to ensure that the schedule changes are agreed upon and known to all involved in the project.

Design Criteria: Our staff is trained in the latest design criteria. All current design criteria, manuals, standards, and directives are kept in a centralized library, located within the project team's work area.

Constructability Review: Team members will perform a constructability review to verify that the plans are "designed as it will be constructed" for a specific project. Traffic control during construction, construction phasing, work zone access, availability of materials, and the most applicable construction methods will be reviewed as part of this process.

Document/Plan Checking: Quality Control reviews will be conducted prior to submittals at key milestones. The reviews will evaluate design criteria for completeness and appropriateness and will ensure that documents are prepared according to your requirements and that they are well-organized, clear, concise, and technically and grammatically correct. The documents will also be reviewed to ensure compliance with generally accepted Professional Standards of Engineering Practices and applicable laws and regulations. Design deficiencies found during the process will be documented by marked-up drawings or reports and revised accordingly. The design file will include records of formal checks performed throughout the duration of the project.

COST CONTROL OF THE DESIGN PROCESS Our first rule of cost control during the design process is to establish with the City an accurately defined scope of work for the project. Second, experts in each discipline outline the activities and develop the work hours and expenditure budgets required to complete the necessary deliverables for the project. The project is monitored on a weekly basis to determine progress and confirm staffing

resources. BHI uses interactive accounting software that allows project managers to review project data and budgets at any time and holds meetings on a regular basis to keep our staff organized and productive.

COST CONTROL OF THE CONSTRUCTION PROCESS Internal communication of project scope is critical to successfully controlling the cost of construction. We invest a great deal of time to the design interface to ensure that estimates of probable construction costs meet both the project scope and the client's budget. These budgets include the necessary deliverables to design and construct the best project for your dollar. Construction cost estimates are prepared at key milestones during project development. A spreadsheet is used for compilation of project quantities and construction cost estimating. These estimates are compared to your budget to determine if it meets your expectations. If the cost estimates are above the budgeted amount and cannot be reduced through design efforts, we notify you immediately and either adjust the project scope to fit within the budget or assist you in seeking additional funding to build the project in its entirety.

COST ESTIMATING TECHNIQUE Our cost estimating approach begins with utilizing existing resources of available cost data from local municipalities (like the City) reviewing any available recently bid projects, NMDOT average unit prices, and an internal database BHI compiles with all projects we design and have bid data for. We also make an effort to have all of our engineers spend time in the field during construction of projects; this provides a solid understanding of construction methods and how they relate to costs. Our cost estimating methods are consistent with the bidding processes used by contractors and are representative of actual project values at the time of bidding. Estimating project construction costs is dependent on three main factors, as demonstrated to the right.

1. Accurate tabulation of all items to be included in the final product to be constructed.
2. Understanding of market conditions and materials based on construction in both public and private sectors.
3. Use of current bid prices from broad-based information sources.

As with all of our projects, we will use each of these bid pricing sources to provide the most representative cost estimate possible after adjusting for current market conditions. BHI also employs several construction engineering inspection staff, who are consulted if project bid items or conditions are unusual and may not fall within a typical unit price cost from a database.

B. AND C. MAJOR TASKS TO BE ACCOMPLISHED AND SERVICES PROVIDED

The BHI team offers the full range of services requested in your RFP. Below we summarize our skills in each of these key areas.

MASTER PLANNING

BHI has a comprehensive history in Project Master Planning which ranges from comprehensive infrastructure Master Plans to assisting other team members in completing engineering aspects of projects. We have worked continuously on numerous projects beginning at the Master Plan stage, and then completing many site-specific efforts on individual parcels that conform to the Plan requirements. Our experience also varies by type of development, demonstrated by the Master Plans we have completed for projects ranging from Industrial Parks and commercial/mixed-use developments with parcels of varying sizes, to residential projects with thousands of units and public amenities.

BHI has provided these services for projects in many cities throughout New Mexico, including local rural communities like Hatch and Elephant Butte. We have also provided Master Planning expertise to multiple end users including commercial, office, industrial, and residential components.

In addition to BHI's experience with the preparation of the Master Plan documents, we have also gained approvals for these plans through a variety of jurisdictions. These approvals have come from commissions, boards, and/or councils, providing the property owner with approved documents that can be provided to potential lot purchasers allowing them to understand the overall development concepts and to better plan their projects. Understanding the approval process allows BHI to provide

expert advice for getting the right combination of incentives for, and requirements of, potential users written into the plan development policies.

BHI has designed many final user projects on individual parcels of property that are controlled by Master Plans. As such, we are very familiar with the critical contents of these plans, how to interpret them, and what requirements are most efficient and should therefore be included in a successful Master Plan package.

STRUCTURAL DESIGN OF BUILDINGS, RETAINING WALLS, ETC.

BHI's engineers provide efficient and practical design solutions for our clients' structures, whether working with masonry, steel, timber, concrete, foundation systems, or stabilized earth and retaining systems. BHI offers services ranging from multi-span bridges to retaining walls.

ROADWAY, TRANSPORTATION, AND PARKING LOT DESIGN

Over the years, BHI has completed numerous roadway and parking lot projects for the City of Las Cruces, as well as other entities. BHI is familiar with the City of Las Cruces Design Standards and Standard Specifications for Road Construction. We closely follow the City of Las Cruces subdivision guidelines, addressing issues such as drainage and ADA accessibility in designs, as well as taking into account issues such as fire truck and ambulance access. Ultimately, our goal is to provide convenient, safe, and economical infrastructures that can support all modes of transportation.

SITE DEVELOPMENT (DRAINAGE AND GRADING DESIGN)

We understand the sophistication and uniqueness that is required on all parts of planning, analysis, and design for site development work. These types of projects often require a detailed and innovative approach to develop workable, cost-effective solutions. We draw from our combined expertise in each area of civil engineering – such as transportation, water, and structures – to achieve such solutions and, ultimately, to meet the mission of the users. Our site development experience allows us to target the critical issues to arrive at good and timely decisions that cater specifically to the individual needs of our clients.

ELECTRICAL DESIGN

Booster Stations: Our team has extensive experience in water utility infrastructure including booster stations. Current water booster station technology involves many complex systems to allow reliable continued service. Power systems must include an on-site power standby generator in case of power loss even though it may only last for short periods of time. Current water booster stations usually involve a higher level of controllability such as variable speed drive motors driving pumps to maintain pressure. This requires programmable logic controllers and other electronic features, including Supervisory Control and Data Acquisition (SCADA) links to central terminals.

Lift Stations: Similarly, our team also has extensive experience with sanitary sewer lift stations. Lift stations are nearly identical to booster stations from the reliability aspect and being crucial to provide the redundancy and robust equipment to handle all issues that may arise throughout the year. Lift stations bring many more issues to address such as the need for greater ease of maintenance, hazardous area classifications, and extensive corrosion protection evaluations. The complexity of the instrumentation and controls associated with these pump stations can be extensive but will allow careful monitoring and control of such critical facilities that cannot tolerate extended failures.

Odor Control Stations: Our team is very familiar with integrating odor control stations where necessary. These types of facilities usually are found at the main water reclamation facility entrance or at large central lift stations. Whether biomass pile or manufacturer canister-type odor control, these units require fan control, water moisture monitoring, and hydrogen sulfide gas monitoring to maintain proper ambient gas control to avoid local residence impact. Combining these into a local control panel with remote access can allow central monitoring to maintain a proper biomass level.

Building Electrical System Design: Whether this involves a new building facility or the renovation of an existing facility our team is experienced with the needs for modern buildings. Resilient buildings today can involve standard utility sourced power as well as incorporating on-site solar photovoltaics and standby generators and we are familiar with all systems. Ensuring the facility is safe for City maintenance staff with a proper arc flash analysis and labeled accordingly per National Electric Code requirements is now a standard requirement. Integrating modern computer networks, LED lighting, and security systems for all building types is another modern basic design standard we incorporate on all projects.

COMPUTER NETWORK ANALYSIS FOR GAS (GASWORK), WATER (INFOWATER), AND WASTEWATER (INFOSEWER).

BHI uses the latest technologies for analyzing water supply and transmission systems; gravity sewer and pressure sewer systems; and high-, medium-, and low-pressure gas networks. We understand that "bad data in" results in "bad data out." To ensure the accuracy of our models, we incorporate record drawings and operations and maintenance manuals, visit with operational personnel, conduct site visits, verify equipment models and data in the field, and perform calibration tests. BHI uses the modeling software that will best meet both the project's and the client's needs. Some of the computer network analysis programs we use include InfoWater Pro, InfoSewer, InfoSWMM, InfoWorks ICM, WaterGEMS, SewerGEMS, GasWorks, Synergi, SKM Power, GeoHMS, GeoRAS, HEC-HMS, HEC-RAS, HEC-FDA, and Civil3D Storm & Sanitary.

SUPERVISORY CONTROL AND DATA ACQUISITION (SCADA) DESIGN

BHI in-house expertise includes planning and designing SCADA systems. Whether these systems use unlicensed or FCC licensed radios, or more sophisticated fiber optic and ethernet communication networks, we understand how to apply them effectively. We have extensive expertise integrating SCADA networks for new and rehabilitated municipal gas/water/wastewater utilities. In-plant SCADA networks can become very complicated as older discrete control systems are transitioned over to the newer Ethernet IP networks while connecting field instrumentation with local control logic units. The need for personnel to have instant access anywhere at any time must be balanced with an enhanced network security approach to safeguard critical systems, and is central to our typical approach on these types of projects.

MECHANICAL DESIGN, GAS SYSTEM DESIGN, PLUMBING, AND HVAC DESIGN

BHI's mechanical team provides support services for projects involving commercial building or ancillary facility support structures. Our primary goal is to design HVAC or domestic plumbing systems that achieve an optimum balance between cost and efficiency for the functions required. A clear understanding of the building function and the comfort required for the occupants and operations enable a better selection and integration of the best available systems to minimize upfront capital and maintenance costs while maximizing the application comfort and energy efficiency. Our building domestic plumbing designs will encompass potable water, chemicals, sewer, and natural gas fuel, all to be sized and applied to the appropriate facility fixtures and equipment. Our other unique mechanical system experience allows us to address analysis and design of the types of processes, such as air delivery units for aerations systems, hydropneumatics, pumping stations, and compressed air units.

BHI's engineering experience and expertise extends to natural gas distribution utilities as well. Our team uses the latest in gas modeling software to plan high and low distribution pipeline networks to handle various types of demands for public utilities that operate their own system. We are familiar with steel and polyethylene pipeline system design and the intricate aspects that dictate how these systems are to be installed on buildings or facilities such as a natural gas-fired water well.

DESIGN AND ANALYSIS OF WATER, WASTEWATER AND GAS UTILITY SYSTEMS

Water: Our BHI staff has provided water infrastructure design and analysis services for southern New Mexico for over 20 years. Our services include groundwater water treatment systems for dissolved minerals such as iron, manganese,

sulfate, arsenic, and fluoride; elevated, ground, and sub-surface storage tanks; domestic wells; booster pump stations; distribution mains and transmission lines; and chemical management systems. BHI uses InfoWater Pro, a GIS-based modeling software to analyze water systems for hydraulic constraints and water quality achievement.

Wastewater: BHI is proud of the numerous wastewater infrastructure projects that we have been instrumental in bringing to completion in New Mexico. BHI has provided services for various types of wastewater treatment systems, including conventional activated sludge with biological nutrient removal, clarification, sequencing batch reactors (SBRs), lagoon pond systems, recirculating sand filtration systems, and septic systems with leach fields. BHI also has extensive experience with planning and modeling using InfoSWMM and InfoWorks software, that are integrated into effective design of gravity sewer collection systems, pressure sewer systems, lift stations, and force mains.

Natural Gas: BHI has extensive experience working with natural gas systems composed of low-, medium-, or high-pressure distribution pipe networks and related pressure regulation stations. BHI uses the latest GasWorks modeling software to analyze gas transmission, high-pressure, and low-pressure distribution systems. We have a current working model of the City's high-pressure system that is current and capable of being integrated into any low-pressure system analysis for use in future planning and development.

TRAFFIC IMPACT STUDIES AND TRANSPORTATION MODELING STUDIES

BHI's traffic and transportation planning and design expertise is one of our core services that we provide to numerous municipalities around the state. We can accommodate a variety of assignments including but not limited to corridor studies, traffic studies, transportation plans, roadway and interstate planning and design, multi-modal facilities planning and design, signal and lighting analysis and design, and associated governmental/environmental approvals and compliance.

Our team of experts can support you from concept to completion, from early planning that involves land use and economic development connections with your transportation network to the completion of a full roadway design product ready for construction.

BHI has an understanding of the latest technology in traffic engineering analysis, including Synchro, WARRANTS, SimTraffic, Hi CAP RODEL, VISSIM, VISUM, HCS+, and aaSIDRA. We have a working relationship with your Traffic Engineering Department, New Mexico Department of Transportation's District 1 and Southern Design Center, as well as the Mesilla Valley MPO, so that we can function like an extension to your staff in completing various transportation-related on-call tasks, as needed.

PHOTOMETRICS/STREET LIGHTING DESIGN

BHI has experience with typical low-level street lighting as well as high-mast roadway intersection lighting. Conventional design practices typically follow NMDOT minimum standards, including expected safe light levels, but other City requirements can also be applied as needed. With the continued evolution of the LED light products, the lower power demands free up space on existing power distribution systems, while simultaneously providing enhanced light outputs increasing safe driving. Another application aspect of LEDs is their greater ability to provide a whiter light, similar to metal halide, which allows a much better contrast for the human eye, to distinguish pedestrians more quickly, specifically needed at intersection crosswalks.

DRAINAGE STUDIES, INCLUDING FEMA FLOOD STUDIES

BHI's several decades of experience with flood control planning studies and storm drainage system design allow us to successfully complete designs for individual site developments, primary roadways, and urban drainage master plans. Our high-quality surface hydrology services include rainfall and runoff analyses, existing drainage facility optimization, floodplain control planning, and stormwater treatment analysis and design. We have extensive experience in the continued integration of GIS, allowing better spatial information visualization in various software programs such as GeoHMS, GeoRAS, and the HEC supported products for all early analysis and project drainage evaluations.

STORM DRAINAGE

Combined with our drainage analysis experience above, this experience translates to storm drainage system design and allows us to successfully complete drainage design plans for individual site developments, primary roadways, and urban drainage master plans and designs. Our high-quality surface hydrology services and plans include rainfall and runoff analyses, existing drainage facility optimization, floodplain control planning, and stormwater treatment analysis and design. Our broad expertise also includes dams, channels, levees, storm sewers, drop structures, energy dissipaters, river restoration, and Structural Best Management Practices (BMPs).

SOLID WASTE STUDIES, LANDFILL SYSTEM DESIGN AND ANALYSIS

Planning and design experience for solid waste handling is unique, and few companies have staff with this knowledge in-house. For work on regional waste management systems, BHI has supported municipal clients with various aspects of solid management facilities that may need optimization such as improved stormwater management or roadway access. However, for an extensive new solid waste facility from the ground up, BHI would search out and team up with a partner consulting firm if this service was needed at a future date.

ENVIRONMENTAL SURVEYS, ASSESSMENTS MONITORING, AND MANAGEMENT

To provide environmental services under this contract, BHI has teamed with Epsilon Systems Solutions (Epsilon). Epsilon brings a broad experience background to the team and specializes in the preparation of environmental documents that comply with the National Environmental Policy Act (NEPA) as well as other local, state, and federal environmental laws and regulations. Epsilon's capabilities include environmental documents, biological evaluations, cultural resource surveys, archaeological excavations, noise and air quality studies, hazardous materials investigations, paleological, and other environmental studies. As a team member with BHI, they will work closely to determine the accurate level of effort for each project and produce the type of documentation required to complete the permitting process.

GEOTECHNICAL ASSESSMENTS

To provide geotechnical services under this contract, BHI will work closely with COZ Engineerong (COZ) for any geotechnical services required by the City. Design and construction of functional and cost-effective structures require a thorough understanding of local soil, rock, and groundwater conditions. COZ provides a wide range of geotechnical assessment services to support all phases of a project, from preliminary design through completion of the building process.

EXPERT WITNESS

Senior BHI staff are able to provide expert witness testimonials in their respective fields, as may be required by the City.

PROJECT MANAGEMENT

BHI follows a customized in-house Project Management Methodology to facilitate the successful delivery of our projects. By using a standardized process with quality checks throughout the project, we are better able to manage staffing, budgets, and project schedules. We manage our projects in our in-house developed BHTracker which keeps our whole team apprised of all information made available and the deliverables created. That information is available at all times throughout the project and can incorporate the City's project management staff as well. For the City, the importance of this methodology is the improved quality and cost control it provides, helping us meet project schedules and budgets more effectively.

This BHI-tailored approach provides our project managers a proven tool that helps ensure that client project goals are accomplished, the schedule is met, and the project delivered is the project expected. While each project presents a unique scope, schedule, budget, and deliverable, having defined steps that move our projects from negotiation to closeout provides our clients the assurance that they can expect a focus on effective project management from our company that is consistent from project to project.

CONSTRUCTION INSPECTION

For us, projects are only complete after the planning and design elements have been transformed into the final constructed product. At BHI, our engineering team understands all of these steps and provides a wide range of services during construction. We know that maintaining strong communication links between the contractor and owner, establishing and meeting schedules, providing a watchful eye during the construction of key elements, and resolving problems in a professional and expeditious manner are critical for success.

During construction management our team can provide a wide range of services that are critical during construction, including construction administration and inspection. One of these services from our team, that has a high return value for the City, is maintaining a full-time construction observer to inspect or observe the project progress for compliance with construction documents to ensure the infrastructure is delivered in the condition and quality expected. Having this oversight enables the confidence that underground systems were installed in a high-quality workmanship manner, similar to the expectations for above ground systems which are easily visible. Without this oversight assurance, it leaves the door open to possible contractor errors or poor workmanship that degrade the final product.

D. TYPICAL PROJECT SCHEDULE/TIMELINE

On-call task order schedules can vary greatly, depending on a number of factors such as the complexity of the scope, any permitting requirements, jurisdiction coordination, public involvement, etc. Upon receipt of a task order, Project Manager Tyler Hopkins and/or Assistant Project Manager Diana Gomez will prepare a scope and fee document to include a proposed schedule and manhour estimate for the City's ultimate approval. Any modifications to the schedule will be made with the City's approval.

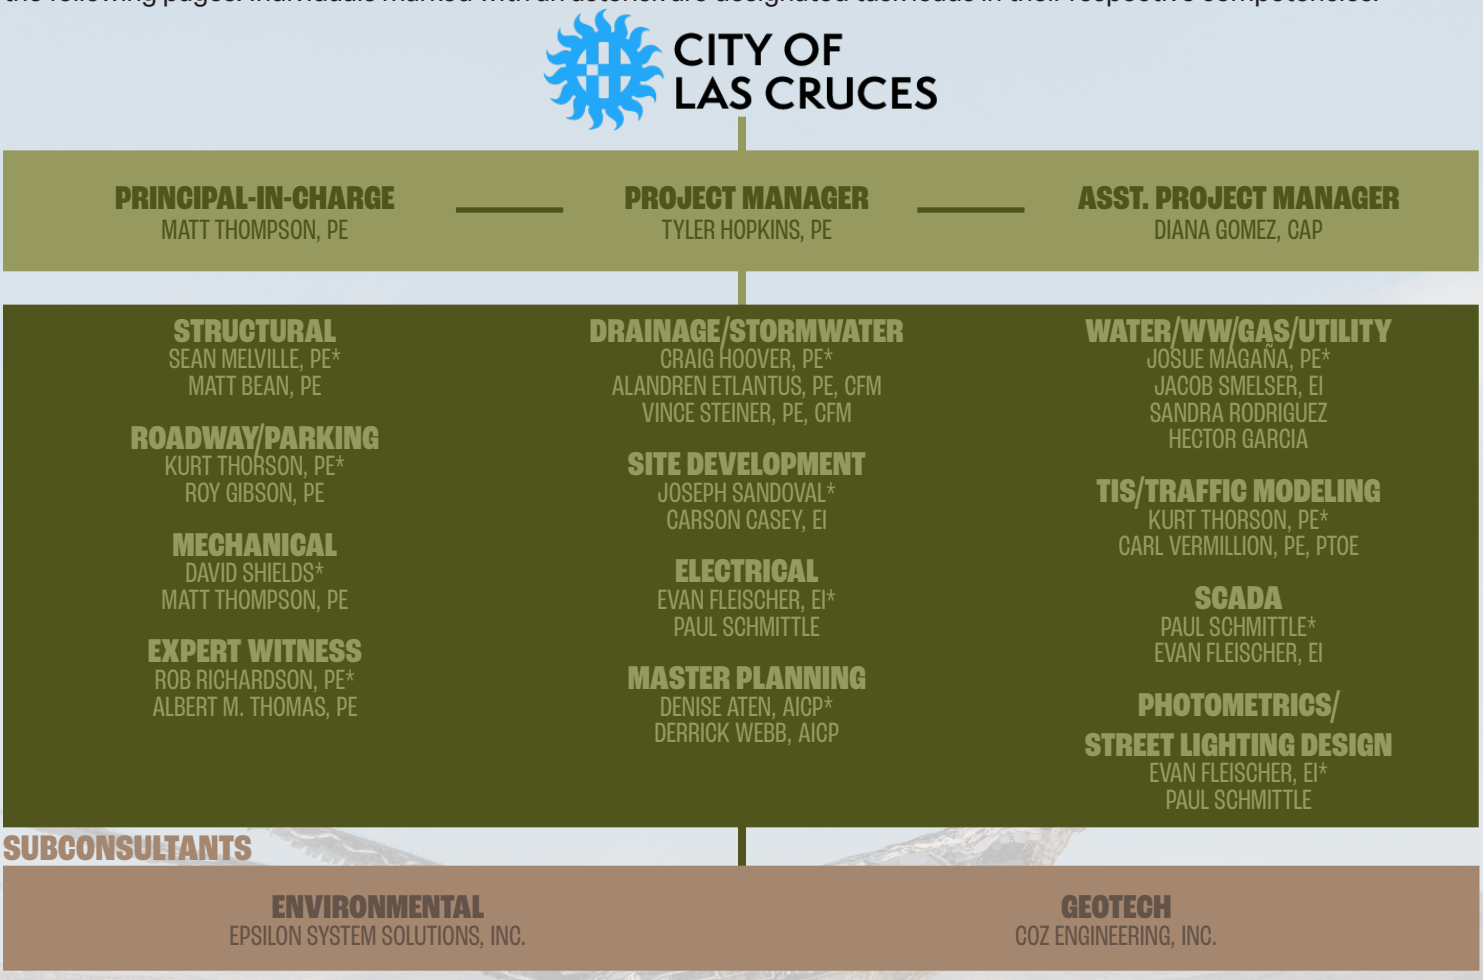
SAMPLE PROJECT SCHEDULE PREPARED FOR THE CITY OF LAS CRUCES UPON ISSUE OF A TASK ORDER.

2. PROJECT TEAM

Our depth of experience and breadth of capabilities — as witnessed by the completion of a significant number of diverse projects in a variety of locations — are continually expanding. Our proposed personnel for this contract are shown in our organization chart by competency, many of whom you are already familiar with as the same folks working with the City to complete task orders under our most recent on-call contract (further detailed in the next section). For this contract, we've added additional competency to the organization chart – Assistant Project Manager Diana Gomez – to ensure that our team continues to meet project design and delivery expectations. Qualifications information for our team members are provided in the following pages. Individuals marked with an asterisk are designated task leads in their respective competencies.



PROJECT TEAM

Below, you will find qualifications of our team. Each staff member is qualified to do the work proposed under this on-call contract, and each has the capacity to take on new task orders. As each task order may vary in expertise required, the percent of time each team member has available for a project will vary. A manhour estimate will be provided for City review upon issuance of a task order.

Name | Location | Qualifications	Years' Exp.	Expertise | Competence
Matt Thompson, PE | Las Cruces | PE NM #13868 | BS Electrical Engineering, BS Mechanical Engineering	32	Project Development and Management | Contract Oversight | Electrical and Mechanical Engineering | Municipal Infrastructure Planning and Design
Tyler Hopkins, PE | Las Cruces | PE NM #20677 | BS Civil Engineering	17	Project Development and Management | City of Las Cruces Familiarity | Multi-Disciplined Expertise | Federal and State Regulatory Requirement Familiarity
Diana Gomez, CAP | Las Cruces | Certified Administrative Professional: NM #93941001, Certificate Project Management | BS Computer Science	20	Project Development and Management | City of Las Cruces Familiarity | Federal and State Regulatory Requirement Familiarity | Grant/Funding Administration

Sean Melville, PE | Albuquerque | PE NM #17400 | MS Civil Engineering (Structural Emphasis), BS Civil Engineering	28	Structural Engineering Specialty | Construction Design Knowledge | Civil Infrastructure Knowledge | Design and Analysis of Bridge Materials
Matt Bean, PE | Albuquerque | PE NM #23120 | MS Structural Engineering, BS Civil Engineering	19	Structural Engineering Specialty | Problem Solving and Client Coordination | Construction Specification Proficiency | Specializes in Facility Design
Kurt Thorson, PE | Albuquerque | PE NM #13310 | BS Civil Engineering	32	Transportation Engineering Specialty | Comprehensive Roadway Technical Expertise | Well Versed in Current Industry Standards | Trained in Value Engineering
Roy Gibson, PE | Albuquerque | PE NM #18772 | BS Civil Engineering	22	Project Development and Management | Transportation Engineering Specialty | Comprehensive Roadway Technical Expertise | Brings a Whole-Project-Site Perspective
David Shields, CET | Las Cruces | NICET Certification Level 3: NM #101754, International Association of Electrical Inspectors #68393 | AS Architectural Technology	32	Project Management | Construction Observation and Inspection | Municipal Infrastructure | Certified Electrical Inspector
Sandra Rodriguez | Las Cruces | Master Civil Engineering, BS Civil Engineering, BA Foreign Languages (Spanish)	1	Water Treatment Familiarity | Utility Familiarity | Safety Inspection Experience | Knowledge of Survey Equipment and Techniques
Jacob Smelser, EI | Las Cruces | EI NM #7726 | BS Civil Engineering	3	Water Resources Experience | Water Treatment Experience | City of Las Cruces Familiarity
Craig Hoover, PE | Albuquerque | PE NM #11848 | MS Civil Engineering (H&H), BS Civil Engineering	37	Water Resources Engineering | Project Management | Stormwater Management | Drainage Analysis
Alandren Etlantus, PE, CFM | Albuquerque | PE NM #19995, CFM NM #13-00335 | MS Civil Engineering (Hydraulics and Water Resources), BS Civil Engineering	17	Water Resources Engineering | Stormwater Management Experience | Water Resource Software Expertise | Project Management
Vince Steiner, PE, CFM | Albuquerque | PE NM #24319, CFM NM #17-00407 | BS Civil Engineering	14	Water Resources Engineering | Stormwater Management Experience | LID and GSI Design Experience | Proficient in Water Resource Software
Robert Richardson, PE | Albuquerque | PE NM #10746 | BS Civil Engineering	42	Expert Witness Experience | Quality Control and Quality Assurance | Multi-Disciplined Engineering | Water and Wastewater Systems Design Expertise
Albert Thomas, PE | Albuquerque | PE NM #11476 | BS Civil Engineering	38	Expert Witness Experience | Traffic and Transportation Engineering | Quality Control & Quality Assurance Experience | Trained in Value Engineering
Joseph Sandoval | Las Cruces	19	Specializes in Site Development | City of Las Cruces Familiarity
Carson Casey, EI | Las Cruces | EI NM #7718 | BS Civil Engineering	2	Site Development Experience | Water Resources Experience | City of Las Cruces Familiarity
Evan Fleischer, EI | Las Cruces | EI NM #7109 | BS Civil Engineering	11	Municipal Infrastructure Support | Electrical Engineering | SCADA | City of Las Cruces Familiarity
Paul Schmittle | Albuquerque | Certificate Commercial Electrical Design, Certificate Electrical Design and Calculations, Certificate Commercial Electrical Systems	37	Electrical Design and Electrical Systems | Water and Wastewater Systems Design Expertise | City of Las Cruces Familiarity
Denise Aten, AICP | Albuquerque | AICP #023292 | MS Environmental Planning, MS Mathematics and Economics	34	Specializes In Transportation Planning, Environmental Planning, Land Use Planning, Public Outreach | City of Las Cruces Familiarity
Derrick Webb, AICP | Denver | AICP # 027364 | Masters Urban & Regional Planning, MS Information and Communication Technology, BA Architecture	14	Long- and Short-term Planning Experience | Experience in Land Use Code Updates, Design Standard Development, Transportation Plans, Corridor Studies | Former MRCOG Employee
Josue Magaña, PE | Las Cruces | PE NM #25644 | BS Civil Engineering	10	Water Treatment Focused | Bio-Filtration Knowledge | Water Resources Expertise | Engineering Software Adept
Hector Garcia | Las Cruces | MS Civil Engineering, BS Civil Engineering, Associate of Science	2	Water Treatment Familiarity | Utility Familiarity | Safety Inspection Experience | Knowledge of Survey Equipment and Techniques
Carl Vermillion, PE, PTOE, RSP1 | Albuquerque | PE NM #25650, PTOE NM #5364 | BS Civil Engineering, Certificate Roadway Safety Professional 1	9	Traffic Analysis and Engineering | Corridor and Intersection Efficiency | Integration of Multi-Modal Facilities | City of Las Cruces Familiarity

PRINCIPAL OFFICER RESPONSIBLE FOR CONTRACT ADMINISTRATION

Matthew Thompson, PE | Senior Vice President
425 S. Telshor Blvd., Suite C-103 | Las Cruces, NM 88011
575.532.8670 | mthompson@bhinc.com

SUBCONSULTANTS (AS-NEEDED)

BHI maintains relationships with providers of specialty services such as those listed below should any task order require them. We also understand the City currently holds on-call contracts with specialty service providers as well. We will obtain approval of the use of any subconsultant on any task order prior to commencing work, or will work with one of the City's current contracted provider, as the City prefers.

Subconsultant	Qualifications
ENVIRONMENTAL Epsilon Systems Solutions, Inc. 205 West Boutz Road Bldg. 4, Suite 3 Las Cruces, NM 88005	Epsilon specializes in providing high-quality environmental compliance services. The firm's professional archaeologists, historians, architectural historians, biologists, National Environmental Policy Act (NEPA) specialists, and GIS personnel have served federal, state, municipal, and private project proponents in the Southwest since 2006. Epsilon's team provides sensitive plant and wildlife surveys, biological baseline studies, mitigation planning and monitoring (selection and implementation of best management practices), Clean Water Act 404 and 401 evaluations, wetland identification, and the day-to-day activities involved with threatened and endangered species program management.
GEOTECHNICAL COZ Engineering, Inc. PO Box 13331 Las Cruces, NM 88013	COZ Engineering will provide geotechnical services. Their capabilities include subsurface exploration and testing; foundation analysis and design; in-situ testing and performance monitoring; earth structures, slopes, and retention systems; dynamic analysis and evaluation; soil stabilization and ground improvement; pavement evaluation; and subgrade and material evaluation.

LOCATION(S) OF OFFICE(S) WHERE THE WORK WILL BE PERFORMED, AND PERCENT OF WORK TO BE PERFORMED AT EACH

Work under this contract will be based primarily in our Las Cruces office. When required, certain specialized design work will be performed in our Albuquerque office. All of our offices are also equipped with video-conferencing capabilities that can be especially useful during project planning and design. Meetings can be conducted with out-of-town suppliers or contractors, government agencies, or our Albuquerque office staff and provide the feel of a face-to-face discussion without incurring undue travel costs or losing time waiting for participants to arrive in town. We anticipate that 75% of the work under this contract will be performed by our Las Cruces staff.

NAME, ADDRESS, AND NEW MEXICO REGISTRATION OF THE PROFESSIONAL RESPONSIBLE FOR AND IN DIRECT CHARGE OF THE WORK

All contract work resulting from this award will be led by Matthew Thompson, Principal-in-Charge (NM PE #13868), with Tyler Hopkins (NM PE #20677) acting as Project Manager in direct charge of the work. Matt and Tyler are both based in our Las Cruces office, and both are readily available to handle any and all matters associated with this contract. BHI's Las Cruces office is located at 425 S. Telshor Boulevard, Suite C-103, Las Cruces, New Mexico 88011. Matt and Tyler can be reached at 575.532.8670 or at mthompson@bhinc.com and thopkins@bhinc.com, respectively.

AGGIE UPTOWN LAS CRUCES MASTER PLAN | NEW MEXICO STATE UNIVERSITY

REFERENCE
Jose Lorea, Assistant Director
Project Development and Engineering
575.646.1234 | jlorea@nmsu.edu

BHI completed preliminary and final design efforts with construction phase support for the first phase of a larger 128-acre development near the New Mexico State University's Golf Course initiated as part of a master planning effort to expand NMSU's commercialization of significant local land resources. BHI was responsible for sitework, roadway, water, wastewater, and natural gas utility design and construction support. A traffic analysis was also performed to evaluate the impact of the development on the surrounding City and NMDOT transportation network. Extensive coordination with the City of Las Cruces and NMDOT was required to establish a comprehensive strategy of the ultimate buildout. BHI also coordinated with utility owners including City of Las Cruces, El Paso Electric, Century Link, Comcast, etc. in support of easement locations, platting approvals, and general design coordination.

MESQUITE-BRAZITO WASTEWATER COLLECTION SYSTEM, PH. 2 | LOWER RIO GRANDE PUBLIC WATER WORKS AUTHORITY

REFERENCE
Martin G. Lopez, General Manager
575.233.5742 ext. 1004
martin.lopez@lrgauthority.org

BHI provided several services to LRGPWWA for this project, including planning, design, and construction. When BHI got involved, the initial planning for the project, in the form of a PER, had already been completed by another consulting firm. The PER was used by LRGPWWA to acquire funding primarily from USDA for the entire project. However, the PER did not satisfy the vision of what LRGPWWA wanted in the expansion of their wastewater collection system. BHI became involved in and was responsible for amending the original PER and moving forward with a design that would maximize the use of gravity sewer collection pipelines and would minimize the use of individual residential grinder pump stations. As a result of the PER amendment, the funding that had been secured was not adequate to complete the entire project, and, as such, the project needed to be broken into two phases.

The first phase of design included 40,000 LF of gravity sewer main, 19,000 LF of sewer force mains, 4 lift stations, 160 epoxy coated manholes, SCADA integration into the existing and new wastewater facilities, provisions for dewatering, and property acquisition. Sewer service lines were designed from the main to the individual residential homes. As part of the individual sewer hookup, the process of decommissioning septic tanks was also included once the collection system became operational.

Throughout the design process, BHI was able to adapt to the changing needs of the client as additional areas to be served were added and designs had to be adjusted to meet requirements established by the permitting agencies. Communication and cooperation with the client and multiple government agencies, including USDA, NMDOT, NMED, EBID, and Doña Ana County, were critical in producing a successful project.

SOUTH CENTRAL WASTEWATER LIFT STATIONS REHABILITATION | DOÑA ANA COUNTY

The Doña Ana County South Central Wastewater Lift Stations Rehabilitation Project was to provide design and construction phase services to rehabilitate 18 of Doña Ana County's south central sanitary sewer lift stations. Most of the existing lift stations were constructed over 20 years ago and were in need of major repairs. The renovations would involve the removal and replacement of pump bases, corroded discharge pipes, and deteriorated plug valves and check valves. Other miscellaneous deteriorated equipment such as conduits, pipe support brackets, and coatings were also evaluated and replaced accordingly.

REFERENCE
Robert Herrera, Parks & Facilities Manager | 575.525.6182
roberthe@donaanacounty.org

Due to the limited amount of funding acquired, the final overall number of lift stations that could be rehabilitated were limited. In order to establish a priority project list, BHI met with Doña Ana County staff to analyze each lift station condition, compare estimated scope of work and produce an estimated cost for each. A priority list of lift stations with a high-low for base bid and bid alternate structure was created in order to bid and construct the most urgent lift station needs first.

This project has completed construction and all lift stations have been re-commissioned. BHI was in constant communication with Doña Ana County staff and the contractor to make fast decisions on these additional components while lift station bypass pumping is in place. The intent of this project was to rehabilitate as many lift stations as possible, providing them with an additional 20-year lifespan. Although perhaps a more difficult engineering problem, restoration during full operation can be a critical cost savings versus full replacement, and in this example saved Doña Ana County significant funding expenditures.

SOUTH CENTRAL WWTP PLANT-WIDE IMPROVEMENTS | DOÑA ANA COUNTY

BHI provided planning and design services for various facility upgrades at the main South Central WWTP facility servicing most of the area south of Las Cruces. These services included replacing failed process elements, such as the plant entrance works screening and grit removal systems, septage handling station, sludge handling, and main aeration system renovation. The entrance works originally part of the upper concrete structure has greatly deteriorated due to hydrogen sulfide gas exposure, and this project relocated these elements to a separate ground-level structure to enable proper screening and grit removal allowing a more accessible structure. All plant flows were re-routed around the facility and connected directly to the aeration basins. Other improvements involved cleaning and renovating the original aeration systems and renovating the aeration blowers and control valves. The solids handling process now utilizes both concrete drying beds as well as a belt-press machine. This belt press operation will be further improved by weatherizing the building enclosure housing the belt-press to allow easier solids dewatering operations during winter conditions.

REFERENCE
Robert Herrera, Parks & Facilities Manager | 575.525.6182
roberthe@donaanacounty.org

A second phase was recently added and is nearing construction completion. It is intended to replace the ultraviolet light effluent disinfection systems and relocate them to a more accessible location on the plant exterior. A recent discharge permit modification required that effluent dissolved oxygen levels be increased upon discharge to the Rio Grande. This will be accomplished with a cascade aeration structure at the final outfall point.

A third phase underway will be a full renovation of the low-voltage electric and SCADA systems to be more robust to weather storm events and power outages the plant has experienced in the past. Redundant power system panelboards will be used to enable multiple source points and eliminate singe-point failure situations, while enhancing utility surge protection systems.

ADDITIONAL PROJECT EXPERIENCE WITH THE CITY OF LAS CRUCES

VETERANS MEMORIAL PARK REDEVELOPMENT

Under our on-call contract with the City of Las Cruces, BHI provided engineering services for a parking lot expansion project to their existing Veterans Memorial Park located on Roadrunner Parkway. The parking lot layout was conceptually designed by City staff and was required to stay true to the concept that was previously reviewed by and accepted by the City Council, City Planning & Zoning, City Parks & Recreation Department, and the local Veteran's Board. The various stages of design went through reviews and approvals from not only the City, but the general public and the Veteran's Board. The project required our full suite of engineering and architectural services including civil site, civil utilities, drainage design, traffic studies and design, structural, architectural design, mechanical, plumbing, electrical, and landscape architecture. The final design provided over 200 new parking spaces, new designated parking for veterans, new ADA access, major improvements to the drainage adjacent structures, relocation of sewer collection main, new entrance/exit to the park, new restrooms with pavilion and kiosk, new parking lot lighting, and reuse water landscape irrigation system.

The project encountered significant challenges stemming not only from the design complexities but also from navigating COVID-related limitations. A notable instance of these difficulties emerged with the creation of a new access drive to the park, necessitating a traffic study for Roadrunner Parkway. During the design phase, stringent restrictions were in effect, impeding access to public parks and gatherings. This lack of access to accurate traffic data, visitor counts, and information about public events resulted in delays in certain aspects of the design.

Moreover, accessing various public agencies and boards vital for project reviews presented substantial hurdles due to pandemic limitations. The project also confronted funding shortfalls during the design stage. The post-COVID surge in construction costs prompted a reevaluation of design features and potential construction phases. Through the redefinition of the project scope and the reduction of certain components to align with the funding budget, the City successfully secured significant funding for the project. As additional funding opportunities arise, the City intends to proceed with the final phases of the project.

Adding to the intricacies of an already complex design, our design team's continuous development remained flexible and adaptable. They navigated not only the fundamental shifts in the working environment due to the pandemic but also managed to smoothly incorporate design elements to align with funding constraints, all the while staying true to their overarching vision for the memorial park.

The project included not only the much-needed parking lot expansion, but also new restrooms, pavilion with kiosk, additional landscape areas with a private contemplation garden, relocation of their existing electrical service and playground, new irrigation and lighting system, as well as major drainage improvements to the adjacent arroyos and structures. BHI teamed with Dekker Perich Sabatini, (DPS) for the architectural and landscape elements of the project. Due to the existing location of the Veterans Memorial Park, extensive flood mitigation, drainage control, and protection was required. The new proposed parking lot would extend into an area of an existing arroyo that experienced heavy runoff during rain events. Our drainage team had to realign the arroyo and provide slope protection for the expanded parking lot. Sewer collection mains were also required to be relocated, while keeping portions of the system active due to ongoing development in the area. New domestic water to the new restrooms was also part of the design project. Utilizing an existing reuse water system, our design expanded the use of reuse water for all new irrigation, in turn utilizing sustainable solutions such as water harvesting where possible. Upon completion, the new park expansion will give its visitors a more enjoyable and safe park experience while maintaining a respectful and honorable memorial for those who have defended our nation's freedom. The whole design team is very proud to have been a part of this important project for the City of Las Cruces and the local Veterans Board.

JACOB HANDS WWTP WEST AND EAST PRIMARY CLARIFIER RENOVATION | CITY OF LAS CRUCES

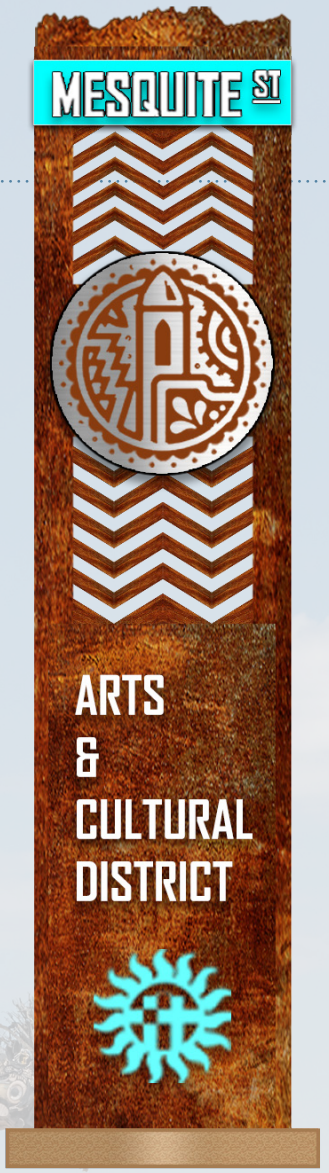
The existing Jacob Hands WWTP treats wastewater from the majority of the City of Las Cruces' collection system. The process train has two 8.5 MGD primary treatment clarifiers, known as the west and east clarifiers, which are 95-foot diameter concrete structures with a protective membrane surface liner constructed in 1983. Each clarifier has an internal clarifier solids rake system made from galvanized steel, which was beginning to exhibit significant corrosion. The drain pipe system valves were broken and would require a deep excavation next to the structure. None of the process pipe had been inspected since construction and, as such, was in an unknown condition. The main structure concrete surfaces had begun to exhibit deterioration after the membrane liner had failed many years before.

This project initially began with an assessment study of the existing west primary clarifier structure, along with its equipment. BHI conducted a review of the original record drawings for the clarifier and surrounding yard piping. The firm then completed a field assessment that included video footage of existing piping, structural assessment of the visible portions of the concrete structure, and existing galvanized steel clarifier equipment. BHI worked with the original equipment manufacturer to aid in the assessment of the existing equipment and to provide quotes for rehabilitation or full replacement of the clarifier equipment. Due to the difficulty of plant space, bypass issues, and costs, the decision was made to salvage and renovate the original structure in place.

To salvage the original concrete structure would require renovating the concrete surface and installing a new membrane liner with a more modern polyurethane lining system. All original underground ductile iron piping was cleaned and had new epoxy lining installed. These two aspects provided the entire structure with a resistance to the primary clarification process to help it last another 30 years. Several options for rehabilitation of the clarifier mechanical system were also explored, but the ultimate decision was made to install a new stainless steel rake structure to replace the older corroded system.

By providing a more robust and corrosion-resistant facility with lined concrete and stainless-steel metallic assemblies for the core of the clarifier, the older facility was fully restored, and the lifespan of the original west primary clarifier was doubled upon construction completion in 2018. An identical process was initiated for the east primary clarifier, and that rehabilitation construction was completed in 2022.

ARTS & CULTURAL DISTRICT PLANNING STUDY AND SURVEY: MESQUITE HISTORIC DISTRICT SIGNAGE AND WAYFINDING PLAN



BHI recently finalized the Mesquite Historic District Signage and Wayfinding Plan for the City of Las Cruces. The plan is a continuation of the City's recent efforts to revitalize its downtown. The two main components of the wayfinding network are gateway monuments that welcome visitors to the larger Arts & Cultural District and a series of wayfinding signs and information kiosks that specifically highlight local destinations and walking routes through the Mesquite Historic District and that increase awareness of the district's unique history and culture. Collectively, these monuments and kiosks/signs will be employed to create a cohesive sense of place and identity for the Mesquite Historic District. The historic district comprises the eastern portion of the Arts & Cultural District, and is the original townsite of modern-day Las Cruces, dating back to the city's inception in 1849 following the Treaty of Guadalupe Hidalgo. In addition to the generations of history that can be found in the district, such as the original Camino Real Trail, Mesquite also features the largest neighborhood of extant adobe homes from Texas to California.

MESQUITE HISTORIC DISTRICT GATEWAY MONUMENTS DESIGN

This task order was for the technical design of six gateway monuments for the Las Cruces Arts & Cultural District in accordance with the vision established and accepted by The City in the plan prepared by BHI. The design of these monuments includes survey of each monument location and the civil, structural, electrical, and lighting design of each monument.

The "Mesquite Historic District Signage and Wayfinding Plan" identifies a 3D or 4D monument consisting of steel panel on concrete foundation at six locations throughout the District, and our tasks for this project really are "soup to nuts," starting with exploring each site to determine the ideal location and placement of each sign. Once complete, this design will result in construction plans and bidding documents to also include traffic control plans. Our contracted services extend through bidding support and include engineering oversight services during construction.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Cobb, Fendley & Associates,Inc., of 3820 Academy Parkway North NE, Albuquerque, NM, 97109, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Cobb, Fendley & Associates,Inc. 3820 Academy Parkway North NE Albuquerque, NM 87109 ATTENTION: Sean Wolfe

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

City of Las Cruces
Bid Clerk

RE: RFP No. 23-24-051 | General Engineering Services

Members of the Selection Committee:

To support the City of Las Cruces (the City) in your continuing improvement of infrastructure, Cobb, Fendley & Associates, Inc. (CobbFendley) has assembled an exemplary and comprehensive team of professionals who combine a diverse base of experience with the appropriate depth of expertise. With an experienced, proactive Project Manager, a strategic and dedicated project team, and a deep commitment to the communities we serve, we feel that we have prepared a proposal that will meet and exceed your needs.

PROJECT LEADERSHIP. Our Project Manager, Chris Almy, PE, is a dedicated, qualified engineer focused on managing your projects to successful completion. As a current resident of Las Cruces, he is immediately available to respond to the City's project needs. Mr. Almy has experience working on similar projects, and will work with the City to meet expectations and goals to enable project success. He holds not only the technical knowledge to serve the City, but also the experience to understand the nontechnical, public challenges that potentially surround general engineering projects. Mr. Almy will be integrally involved in the design, development, bidding, and construction of projects.

PROJECT TEAM. The proposed team consists of specialized professionals in the field of civil engineering. Our firm's experience with multiple disciplines provides a business model that is designed to provide comprehensive design services. Details of key staff are provided throughout our proposal. The CobbFendley team is supported by local design engineers from CobbFendley's Mountain Region offices to provide additional resources for larger or quick-turnaround projects or multiple work orders. Additionally, CobbFendley has included the following subconsultants as part of the team to add additional strength and experience in supporting disciplines.

- **GEOMAT, Inc. (GEOMAT)** – Geotechnical assessment services
- **Lee Engineering (Lee)** – Traffic impact studies and transportation modeling studies and photometrics/street lighting design services
- **Water Works Engineers (Water Works)** – Electrical design, computer network analysis for water (InfoWater) and wastewater (InfoSewer), mechanical design, and supervisory control and data acquisition (SCADA) services
- **Zia Engineering & Environmental Consultants, LLC (Zia)** – Solid waste studies, landfill system design and analysis and environmental services

COMMITMENT. The project team proposed in this proposal has exhibited a history of dedication and commitment to the communities where we work. Members of this team have lived and worked in and around New Mexico for the entirety of their careers and have come to appreciate and understand the character and the uniqueness of New Mexico.

VALUE ENGINEERING. The CobbFendley team sees every project as an opportunity to save the City money. Through our in-house utility coordination, subsurface utility exploration, surveying, and utility design teams, CobbFendley routinely looks for value-engineering solutions to reduce costs and maximize benefit to the community during design and construction. Our goal is to deliver comprehensive design plans with executable options and cost-saving recommendations that will benefit the City and your end users. We look forward to the opportunity to further discuss our process, planning methodology, and project approach with you and your staff.

As the Senior Vice President, Region Manager, and person authorized to contractually obligate the firm, I, Sean Wolfe, PG, acknowledge receipt of all Amendments associated with this solicitation. We appreciate your time and consideration of CobbFendley's proposal and look forward to working with the City of Las Cruces to provide General Engineering Services.

Sincerely,

Cobb, Fendley & Associates, Inc.

RFP NO.: **23-24-051**

DUE DATE/TIME: **February 27, 2024 / 4:00 p.m.**

In compliance with the requirements of this RFP, I, the undersigned, offer and agree to furnish any or all materials and/or services to the City of Las Cruces within the time agreed.

I further certify that this company has not been debarred, suspended, or otherwise made ineligible for participation in Federal Assistance programs under Executive Order 12549 Debarment and Suspension as described in the Federal Rules and Regulations.

Receipt of Addenda Nos.: 1 is hereby acknowledged (where none received, place a zero in this space)

Evaluation Criteria No. 1 (Technical Approach)

From Concept to Completion

A. TECHNICAL APPROACH OF ALL PROFESSIONAL, TECHNICAL AND CUSTOMARY SERVICES

CobbFendley and our teaming partners are uniquely qualified to address any City engineering project tasked by the City. CobbFendley has successfully completed civil engineering projects for over 43 years, including numerous projects for cities and similar municipalities charged with providing safe and reliable municipal infrastructure. **CobbFendley also has the unique characteristic of providing in-house surveying, subsurface utility exploration, utility coordination (UC), and right-of-way (ROW) acquisition to complement our civil engineering design capabilities.**

Our Mountain Region offices enjoy access to the resources of the entire 630+ person firm so we can scale our operations to meet client needs. Our breadth of capabilities adds value to our ability to respond to the specific demands of each project and allows us to adjust the team as the project progresses, in consultation with the City.

CobbFendley has assembled a highly qualified and experienced team of professionals and technical support staff to serve the City's mission. Our team has extensive experience related to municipal infrastructure design with an emphasis on sustainable solutions applicable to the environment of southern New Mexico.

Beyond practical and environmentally conscious design approaches, we are also very familiar with regulatory requirements stipulated by the Multiple Separate Storm Sewer System (MS4) program, the National Environmental Policy Act (NEPA), and United States Army Corps of Engineers (USACE) Clean Water Act compliance requirements. By blending our technical competence and experience with a holistic approach to addressing southern New Mexico's unique arid hydrology and erosive soil conditions, CobbFendley can address and solve the City's infrastructure challenges.

PROJECT LEADERSHIP. As described in more detail in the subsequent section, **our team will be led by Project Manager, Mr. Chris Almy, PE**. He has a proven track record of coordinating with City personnel in the development of scope of work, budget, and schedule that meets project goals. His role on the City of Las Cruces' Professional Services contract will be to set deadlines, assign responsibilities and monitor/summarize progress of project. He will oversee project objectives and deliverables and will serve as liaison between the project team and the City staff.

CobbFendley's Project Principal / QA/QC Reviewer will be Mountain Region Municipal Department Manager Mr. Brad Sumrall, PE, who has designed, managed, and supervised New Mexico projects for over 31 years. As Project Principal, Mr. Sumrall will provide senior leadership and guidance to project teams overseeing contract compliance, delivery on scope, budget, and schedule, and allocation of resources to keep projects on track.

INTERFACE WITH THE CITY. The City of Las Cruces staff will be an integral part of our project team and will be included in all specific project assessments and key decisions. Mr. Almy is dedicated to accomplishing the City's objectives. He understands the importance of well-timed coordination with the appropriate City personnel and welcomes your valuable input. Mr. Almy is a Las Cruces resident and will be available for regular in-person or virtual progress and coordination meetings, as well as emergency meetings as required. It is our custom to have meetings when they are necessary to accomplish project objectives. We will provide meeting agendas and minutes. In addition to coordination meetings, CobbFendley will provide weekly or bi-weekly project progress updates to keep City staff informed on project progress, upcoming planned activities, needs from the City, and outstanding challenges.

COST-EFFECTIVE DESIGN AND CONSTRUCTION. We understand that our job as a consultant is to provide the City of Las Cruces with cost-effective solutions and designs to meet the City's needs. CobbFendley will define the approach to the plans and contract documents, as well as the specific techniques that could be implemented in construction. A few examples to be considered and studied during the design phase include:

- Alternate pavement types and/or temporary pavement
- Temporary striping (for travel lanes and bike lanes)
- Recycled base, water quality control choices (rain gardens, sedimentation/filtration ponds, vegetative filter strips)
- Trenchless versus open trench options for pipe installation
- Storm sewer versus roadside ditches (in rural areas)

Although this list is not complete, each solution may impact projects differently with respect to public acceptance, construction schedule, and project costs. CobbFendley evaluates these to develop cost-effective, feasible options, while promoting the health, safety, and welfare of the public. We maintain an extensive library of record bids for a variety of

Evaluation Criteria No. 1 (Technical Approach)

projects and site conditions for use in developing unit prices. We also have professionals on staff with a construction background who maintain a network of resources to provide pricing based on current market costs. CobbFendley will coordinate with contractors and suppliers with experience on projects similar in size and scope to validate the estimate based on current construction rates and project challenges. Impacts to the market supply chain, such as weather, increasing costs of raw materials and local construction costs, or oil market shifts will be considered when developing construction cost estimates.

QA/QC PROGRAM. Last minute rework due to poor communication is one of the most common sources of errors. Communication will start with sharing the scope of work with all personnel directly involved in the design of the project. The Engineering and Production Teams will have the tools to do their best work if they understand the overall goal of the project and how their work affects other disciplines. The communication continues with informal checks and visits to the designers by the Team Lead and the Subcategory Leads. This gives the designer a chance to ask questions and an opportunity for the manager to see that the design is proceeding in the direction intended. In addition, prior to each submittal to the City, a formal internal review will be conducted by a senior engineer following CobbFendley's established QC protocol.

QA / QC Procedure
Production Team ✓ Produces exceptional quality work following firm / client standards for quality and compliance
Team Task Leaders ✓ Produce exceptional work ✓ Verify compliance with firm / client standards ✓ Implement project Quality Control Plans
Project Manager ✓ Coordinates QA/QC activities, meetings, and schedule ✓ Overall project responsibility ✓ Provides high-level technical review
Technical Reviewer ✓ Provides detailed technical review ✓ Gives feedback to QA/QC Manager for follow-up
QA/QC Manager ✓ Directs QA/QC activities ✓ Review QA/QC Plans ✓ Back-checks calculations and standards compliance
Project Principal ✓ Provides final review of overall project ✓ Provides resources to implement QA/QC procedures

Our markup and review process includes the initial review, but also emphasizes the need to backcheck the comments and coordinate with the Engineering and Production Teams, then verify that comments were addressed before releasing the plans for City submittal. The time for this will be built into the project schedule. Comments will be addressed prior to the formal submittal to the City. As comments are received from the City and other reviewing agencies, if applicable, we will clarify conflicting or unclear comments and a backcheck of those comments will be incorporated into the next internal review.

Constructability reviews will also be conducted at regular intervals during the design process. These will be conducted by subject matter experts and managed by Project Principal / QA/QC Reviewer Mr. Brad Sumrall, PE, who will not only look for issues with the construction phasing such as drainage, staging, adequate room for traffic, temporary shoring and the type of traffic control required; but will also look for ways to reduce the cost of the project, the methods of material measurement and payment, the types of pavement, and other options will be examined to determine if there are more efficient methods or less costly materials that will provide the same quality product.

SUBCONSULTANT ROLE IN MANAGEMENT STRUCTURE. Our team is comprised of CobbFendley staff and subconsultants to form a cohesive design team. We have strategically selected subconsultants that have worked previously with our staff; thus, the level of expectation is known and allows our team to work seamlessly and efficiently from day one. Assignments to subconsultants will involve the development of a detailed scope of work, budget, procedures, and design schedules that assimilate into the overall project scope.

B. MAJOR TASKS TO BE ACCOMPLISHED

CobbFendley's experience with multiple on-call contracts and a variety of City engineering services has resulted in the development of the tools and skills needed to develop an approach to managing the scope, schedule, and resource needs for specific projects. With each project assignment, Mr. Almy will provide a detailed scope of services tailored specifically to the subject project. As the work plans will differ for various types of projects in each category anticipated under this contract, we have developed a five-phase project work plan that can and will be easily adaptable for each project. Having this base work plan and templates established to develop person-hour estimates, along with Project Manager Chris Almy's extensive experience with engineering design projects in the Dona Ana County and Las Cruces areas,

Evaluation Criteria No. 1 (Technical Approach)

provides our team a framework for quick understanding and turn-around of project scopes and estimates.

Our team will approach, develop, and manage assigned projects with the **five-phase work plan** *outlined below*, applying our experience and knowledge of various challenges for each type of project as outlined in the pages to follow.

FIVE-PHASE WORK PLAN

PHASE 1 - PROJECT SCOPING AND PLANNING

- Meet with the City staff to understand project intent, limitations, opportunities, staff requirements, design criteria, prioritization of project scope, stakeholders, and schedule
- Develop draft scope
- Present and negotiate scope with City staff
- Develop fee and schedule

PHASE 2 - PRELIMINARY ENGINEERING AND DESIGN

Preliminary Phase:

- Fact-Finding – conduct field investigations, perform existing utility research, identify environmental constraints, evaluate alternative materials and construction methods, and identify permitting requirements
- Conduct preliminary meetings with other permitting agencies and stakeholders
- Identify and analyze alternatives
- Develop preliminary construction cost estimates, sequencing, and schedule
- Identify preliminary ROW requirements
- Develop preliminary design layouts and calculations
- Present findings and recommendations to the City

Design Phase:

- Conduct surveying to determine existing field conditions and assess right-of-entry, as needed
- Conduct subsurface utility exploration investigations, as needed
- Perform geotechnical and/or environmental studies, as needed
- Develop 30% detail construction plans
- Coordinate with utility owners and other permitting agencies
- Prepare executive summaries addressing H&H studies, scour analysis, modeling, traffic studies, roadway design, site drainage and grading, water/wastewater routing, sizing, material types, pump/lift station/tank site location, sizing, etc., as applicable
- Develop 60% detail construction plans and prepare special specifications
- Prepare construction cost estimate, project sequencing, and schedule
- Develop 90% detail construction plans and prepare bid documents
- Prepare Contractor qualification requirements
- Prepare final permits for construction as needed (USACE, NMDOT, Railway, etc.)
- Develop 100% detail construction plans and prepare final project manual for bidding

PHASE 3 - BID PHASE

- Provide construction plans and project manual for distribution
- Conduct a pre-bid conference
- Respond to Contractors' pre-bid inquiries
- Issue addenda, as necessary
- Attend bid opening
- Analyze bid tabs
- Check Contractor references
- Provide recommendation of award
- Assist in execution of contracts

PHASE 4 - CONSTRUCTION ADMINISTRATION PHASE

- Issue conformed documents
- Conduct pre-construction conference
- Conduct periodic site visits to review progress and character of the work
- Review and make recommendations regarding Contractor pay estimates
- Review and make recommendations regarding Requests for Information (RFIs)
- Review and make recommendations regarding shop drawing submittals
- Review and make recommendations regarding Change Orders
- Interpret plans, specifications, and contract documents as required
- Conduct final walk through and punch list
- Prepare record drawings
- Prepare engineer's concurrence letter certifying that the project was constructed in accordance with approved plans and specifications
- Assist the City with contract close-out

PHASE 5 - WARRANTY PHASE

- Conduct 11-month walk through and punch list
- Coordinate with the City and the Contractor to correct project deficiencies, if encountered

Evaluation Criteria No. 1 (Technical Approach)

C. DETAILED STATEMENT OF SERVICES TO BE PROVIDED UNDER EACH TASK

CobbFendley has full, in-house design capabilities, from the planning phases through plan production to project construction. Our capabilities include all the core areas of utilities engineering, surveying, hydrologic analysis and hydraulic design, roadway design, and additional support services such as geographic information systems (GIS) and subsurface utility exploration, among others. As a full-service civil engineering firm with a complement of extremely qualified teaming partners, CobbFendley brings the technical skills, experience, relationships and problem-solving ability to address the City's needs. We firmly believe that the most effective solution is carefully thought out in cooperation with our client which avoids lost opportunities to capitalize on efficient, cost-effective, and sustainable solutions.

MASTER PLANNING. CobbFendley strives to incorporate ideas and present options that help municipalities maximize budgets and save money. As consultants, it is our job to help our clients gather all the information needed to make the best decisions regarding infrastructure needs. We will work with you to conduct necessary studies, evaluate alternatives, make recommendations, and present reports to City staff and stakeholders. We make recommendations based on your priorities, spending limitations, funding, and current and future infrastructure needs and plans.

STRUCTURAL DESIGN OF BUILDINGS, RETAINING WALLS, ETC. CobbFendley offers a full range of structural engineering services, including design and detailing for buildings, retaining walls, bridges, culverts, vaults, junction boxes, wet wells, and lift stations. We also offer complete bridge inspection services and bridge condition assessments for the rehabilitation or replacement of existing structures.

To expedite plan development and structural design services for our clients, we use structural design software including VBent, PGSUPER, LPile, BGS, BMCOL51, ST AAD, RISA 3D, MDX and other programs. Using this software, our structural engineers will produce typical sections to obtain City approval on major design elements, including columns, beams, decks, railing, sidewalks, travel lanes, bike lanes, shared use paths and aesthetics. Our structural team also stays in close communication with the Roadway Design Lead for roadway profile, bridge drainage, and cross-slopes, as well as the Drainage Design Lead at water crossings for bridge low chord and hydraulic openings. We coordinate with the Geotechnical Engineer to determine existing soil strata characteristics and water table for buoyancy calculations. For subsurface structures, our designs provide watertight and structurally reinforced details at openings, construction joints, and corners.

Our structural team has recently worked with our water/wastewater design team on lift station and pump station designs, including wet wells, designs of foundations for generators, and structural design for buildings for other municipalities.

Construction cost estimates will be provided to the City for various structure types and configurations for selection consideration. CobbFendley can also produce layouts for approval and submittal to NMDOT, if required. We will coordinate construction phasing with the other jurisdictions and stakeholders and advise on appropriate demolition limits for existing structures and minimum construction phasing widths for structural components.

ROADWAY, TRANSPORTATION, AND PARKING LOT DESIGN. CobbFendley's roadway and transportation engineering experience includes new construction, pavement rehabilitation, street widening, and complete reconstruction projects for rural municipalities and NMDOT. Many transportation projects will also include design and rehabilitation of the stormwater collection system, replacement of the municipal water and wastewater lines, relocation of franchise utilities, and pedestrian improvements, such as landscaping, sidewalks, access ramps, and street lighting.

Our roadway engineers provide an array of services to improve all types of surface transportation systems including city streets, rural roads, highways, parking lots, and transit facilities in municipal settings. From the initial studies and planning phases to the final construction administration, CobbFendley has experience providing the anticipated roadway design services for this contract:

- Complete Design Packages
- Route Studies and Schematic Design
- ADA Compliant Pedestrian and Bicycle Facilities Design that meets the requirements of NMDOT PROWAG and FHWA Standards
- Roadway Design
- Constructability and Safety Reviews
- Pavement Design/Rehabilitation
- Public Involvement
- Feasibility Studies

Our Project Manager was recently certified to support and comply with the NMDOT Tribal/Local Program Authority requirements to leverage Federally funded projects.

Evaluation Criteria No. 1 (Technical Approach)

SITE DEVELOPMENT (DRAINAGE AND GRADING DESIGN). CobbFendley has been involved in hundreds of private, commercial and government site development design and development projects. This experience provides us the expertise to be able to provide the City with any site development design or plan review services for new buildings, parking lots, driveways, water, wastewater, or stormwater facilities and drainage and/or water quality detention facilities.

ELECTRICAL DESIGN (WELLS, BOOSTER STATIONS, LIFT STATIONS, ODOR CONTROL STATIONS, BUILDING ELECTRICAL SYSTEM DESIGN). To verify continuity of project objectives, CobbFendley has included Water Works on our team to lead Electrical Design services. WaterWorks has designed electrical systems for municipal facilities, commercial and office buildings, industrial facilities, and primary electric transmission and distribution lines. WaterWorks' team of electrical engineers have provided technical leadership, quality assurance, design, and analysis of electrical distribution and generation systems including multiple services and generators, using software tools such as SKM PowerTools. Designs have included supervisory control and data acquisition (SCADA), power distribution, standby power generation, lighting, fire alarm, communications, and other life safety and special systems.

COMPUTER NETWORK ANALYSIS FOR GAS (GASWORK), WATER (INFOWATER), AND WASTEWATER (INFOSEWER). **Gas (GasWorkS).** CobbFendley has experience with Gas Distribution system modeling and extensive expertise in all engineering aspects of gas transmission pipeline and distribution engineering, including but not limited to design of transmission pipeline, distribution gas mains, Horizontal Direction Drills (HDDs), regulator stations, meter stations, mainline valves, odorizers, compressor stations, and other gas infrastructure. We also prepare highway and railroad permit packages, loading and stress calculations, hydrotest plans, and other support services. CobbFendley's personnel has the capabilities to handle all aspects of the project demands. We are familiar with the GasWorkS program and have recommended it in the past to clients. With our vast knowledge from working with large pipeline companies and smaller cities and distribution companies, CobbFendley is here to support the City on any project needs, no matter how large or small. **Water (InfoWater) and Wastewater (InfoSewer).** To verify continuity of project objectives, CobbFendley has included Water Works on our team to lead Computer Network Analysis for Water (InfoWater) and Wastewater (InfoSewer) services. Water Works' engineers have developed O&M and SOPs for existing facilities, to hydraulic and process modeling (Fathom, SewerCAD, BioWin, InfoWater, InfoSewer, InfoWorks ICM), GIS and mapping, condition assessment, rehabilitation/replacement, planning, funding and permitting, design and bid, and construction of water/wastewater treatment and infrastructure systems.

MECHANICAL DESIGN, GAS SYSTEM DESIGN, PLUMBING AND HVAC DESIGN. To verify continuity of project objectives, CobbFendley has included Water Works on our team to lead Mechanical Design services. WaterWorks is experienced in providing mechanical engineering services in support of pumping systems, mechanical piping, HVAC, and plumbing design projects - including a variety of large and small-scale wastewater facilities. The firm's specialty is hydraulic systems and the conveyance of all water types – this includes the design of gravity and pressurized pipelines, pumping stations, hydraulic and surge analysis, and pump selection.

WATER, WASTEWATER AND NATURAL GAS UTILITY SYSTEM DESIGN AND ANALYSIS. CobbFendley has engineered numerous natural gas, water, and wastewater improvement projects for public and private clients. Our team has assisted many municipalities and utility districts with the design and construction of water system upgrades, including new and rehabilitation of water lines, ground and elevated water storage tanks, water plant design, rehabilitation, and expansion (potable and reclaimed), water supply wells, water distribution system design, water system modeling, water quality analysis, pump stations, elevated storage tank design and rehabilitations, and ground storage tank design. Our team also has extensive experience in wastewater infrastructure design and evaluation, including wastewater treatment plant design, rehabilitation, and expansion, gravity sewer collection system rehabilitation assessment and design, wastewater system analysis, force main design and rehabilitation, lift stations, wastewater pump stations, outfall permitting, and renewing and amending treatment plant permits. CobbFendley has extensive expertise in all engineering aspects of gas transmission pipeline and distribution engineering, including design of transmission pipeline, distribution gas mains, Horizontal Direction Drills (HDDs), regulator stations, meter stations, mainline valves, odorizers, compressor stations, and other gas infrastructure.

Our expertise also includes impact fee studies, CIP planning studies, feasibility studies, and forensic investigations. Our team is experienced in open-cut trenching, as well as various trenchless construction technologies, including conventional bore and jack, tunnel boring, horizontal direction drilling, sliplining, CIPP, and pipe bursting. We are familiar with the agency coordination (NMED, EPA), design requirements, and permitting required for gas, water, and wastewater projects.

Evaluation Criteria No. 1 (Technical Approach)

TRAFFIC IMPACT STUDIES AND TRANSPORTATION MODELING STUDIES. To verify continuity of project objectives, CobbFendley has included Lee on our team to lead Traffic Impact Studies and Transportation Modeling Studies services. Lee produces safety assessments, crash analyses, site development impact analyses, capacity studies, access assessments, and queuing analyses utilizing the latest MUTCD, AASHTO, HCM, and HSM publications for public and private sector projects. The firm's staff has the practical expertise to interpret the statewide and Mid-Region Council of Governments) planning models to extract valuable traffic projections for assessing alternatives. While these data are extracted in link volumes, Lee uses the Fratar method to obtain turning movement projections usable for traffic operations studies.

PHOTOMETRICS/STREET LIGHTING DESIGN. To verify continuity of project objectives, CobbFendley has included Lee on our team to lead Photometrics/Street Lighting Design services. Lee has the expertise to complete street lighting design and analysis using the latest standards and guidance. Roadway Illumination design and studies involve an in-depth assessment of roadway conditions to determine the design criteria. Location-specific factors are evaluated in accordance with standard specifications and design requirements. The firm's focus on the technical design of lighting improvements includes finding solutions for complex issues, achieving a high project value for citizens, and creating a network of streetlights that balances the safety needs of the community. Street lighting projects include photometric analysis, light distribution type to maximize coverage and reduce private property light spillage, circuit design, wiring size, voltage drop calculations, utility coordination, illumination pole base foundation design, integrating lighting controls, as well as the evaluation of different lighting technologies. Lee is proficient in the use of roadway lighting analysis programs, including Agi32 and Visual.

DRAINAGE STUDIES, INCLUDING FEMA FLOOD STUDIES. CobbFendley has the design experience to meet City's needs in maintaining a high-performing stormwater system. Our hydraulics and hydrology engineering experts regularly conduct studies to analyze potential flooding problems and design facilities for the prevention and alleviation of flooding. Whether impact studies or drainage structure design is required, experienced staff will provide timely and cost-effective solutions as part of larger utility and roadway projects and as standalone projects. The CobbFendley team is familiar with agency coordination (FEMA, USACE, EPA, NMED, NMDOT), design requirements, and permitting, and will deliver projects that are in compliance with local, state, and federal regulations.

Our team includes Certified Floodplain Managers who are accomplished hydraulic analysts with direct applicable experience preparing and completing Conditional Letters of Map Revision (CLOMR) and Letters of Map Revision (LOMR) submittals. Our projects range from evaluating existing floodplains, to demonstrating design impacts that modify floodplains for residential and commercial development. CobbFendley uses design software such as 1D and 2D XP-SWMM, 1D and 2D HEC-RAS/HEC-HMS, 1D and 2D InfoWorks ICM, StormCAD, and GeoPak to perform drainage analysis. The project team will gather essential field data and develop a preliminary plan for review, collect feedback from City staff and prepare a report with recommendations and implementation schedule, prepare construction plans for drainage improvements, and make presentations to City staff, City Council and/or the public, as necessary. Our drainage analysis and design services include:

- Storm Sewer System Design
- Roadside Ditch Design
- Channel Design
- Culvert Design
- Detention Pond Design
- Water Quality Control Design

SOLID WASTE STUDIES/LANDFILL SYSTEM DESIGN AND ANALYSIS. To verify continuity of project objectives, CobbFendley has included Zia on our team to lead Solid Waste Studies/Landfill System Design and Analysis services. Zia's engineers have an extensive background in solid waste management planning, design, closure, environmental site investigations, environmental site remediation, solid waste facilities permitting and recycling. The firm has worked closely in landfill permitting and closure efforts to pursue and manage grants and loan funds for solid waste projects, as well as the design and permitting of various MRFs, transfer and convenience centers.

ENVIRONMENTAL SURVEYS, ASSESSMENTS MONITORING AND MANAGEMENT MONITORING AND MANAGEMENT. To verify continuity of project objectives, CobbFendley has included Zia on our team to lead environmental services. Zia has more than 12 years of experience in providing environmental engineering and environmental consulting services to the City of Las Cruces through on-call environmental engineering contracts on such projects as the design and permitting of the City's Recycling Center, air permitting of the City's electrical cogeneration facility at the wastewater treatment facility, annual development of the City's Water Consumer Confidence Report, civil design of the City's water and wastewater laboratory facility, response to City water and wastewater distribution issues, permitting support for renewal of the City's wastewater reuse facility and multiple environmental investigations (Phase I ESA's), NEPA studies and cultural and biological clearance surveys.

Evaluation Criteria No. 1 (Technical Approach)

GEOTECHNICAL ASSESSMENTS. To verify continuity of project objectives, CobbFendley has included GEOMAT on our team to lead geotechnical services. GEOMAT's process evaluates every aspect of the project from the scope development to the field work, to laboratory testing, and final to the geotechnical recommendation portions of the project. This includes specialized, specific project managers and professional engineers for all project types, from bridges, pavements, retaining structures, and diversion structures.

EXPERT WITNESS. Professional Engineers of CobbFendley and our teaming partners have the technical expertise to provide expert witness testimony for the City. Senior personnel have provided expert witness support related to judicial actions and routinely provide public outreach support when required. In addition, Mr. Martinez of Zia has also provided expert witness testimony for projects related to groundwater and soils contamination and has supported several clients in depositions and expert witness roles related to environmental compliance and drainage issues.

PROJECT MANAGEMENT. Project Manager Mr. Chris Almy, PE, will develop a Project Management Plan (PMP) to provide all team members with a single document of relevant project information. The PMP includes the scope of work, team member roles (internal and subcontractors), budgets, design schedule, QA/QC Plan, Risk Management Matrix, Change Management Plan, Issue Log, guidelines for design file management, and invoicing requirements. Having these plans in place makes us better prepared to keep focused on the big picture goals and ready to handle unforeseen circumstances, which could surface during project development.

CONSTRUCTION INSPECTION. CobbFendley maintains a dedicated Construction Management Department with more than 100 years of combined construction observation and inspection experience. We have 19 construction inspectors highly experienced in managing various construction phase services, including pre-construction meetings, public meetings, Contractor RFIs, change orders, Contractor invoice approval, construction site visits, and preparation of record drawings once the project is complete. They are available to provide services on a wide variety of public works projects, including utility, roadway, and drainage. Our highly qualified inspectors have been well trained and are certified in a wide variety of categories. These categories include, but are not limited to, American Concrete Institute (ACI) and Associated Contractors of New Mexico Transportation Technician Training and Certification Program (TTCP).

D. PROPOSED PROJECT SCHEDULE

The CobbFendley team believes the schedule is one of the most important factors in project success. The schedule will establish milestones for deliverables and allow the City to provide input on project timelines. Our history of completing deliverables on schedule is one of the many results of our project success over the years. CobbFendley commits to meeting the schedule deadlines that will be developed in the scoping phase and is dedicated to meeting the timelines contained in the contract documents and included as part of the initial project development with the City's Project Manager. Our Project Manager, Mr. Almy, will develop a detailed production and coordination schedule at the onset of the project, including bid and construction phase services. The schedule will include resource allocations to determine the required commitments of team members to meet the schedule. In the event of necessary schedule recovery (or should the City decide to expedite the design process), the CobbFendley team is nimble and responsive and has the ability to pull additional resources from the deep Company team to meet design schedules. Our Project Principal, Mr. Sumrall, is committed to the success of City of Las Cruces projects and will assign resources as required to meet project schedules.

The following project schedule represents sample activities proposed that will be accomplished by the CobbFendley Team. A schedule for individual task orders issued will be developed upon notice to proceed. Schedules can be expedited when needed due to CobbFendley's depth of staff and our ability to self-perform requested services. Our lean team structure equates to simplified management, coordination, and quality control.

Sample Project Schedule	Week 1	Week 2	Week 3	Week 4

Evaluation Criteria No. 2 (Qualifications/Competence)

ABOUT THE FIRM

CobbFendley was founded on April 1, 1980, and is an employee-owned consulting firm providing civil engineering and land surveying services for 43 years. Our staff of over 630 employees bring an unmatched level of expertise and experience, and is committed to serving the communities where we live and work. CobbFendley's diverse team of professionals is comprised of engineers, designers, surveyors, ROW agents, utility specialists, technicians, and support personnel. Our in-house services include road design, sidewalk and ADA design, drainage design, structural/bridge design, hydrologic and hydraulic evaluation, flood disaster protection and recovery support, traffic engineering, site design, utility coordination and wet/dry utility design, SUE, surveying and mapping, and ROW acquisition, among others.

As a client-oriented firm, CobbFendley believes that the principal factor behind our nearly 43-years of success and growth is our dedication to producing quality, timely work. CobbFendley has established and will continue to maintain confidence with our clients by exhibiting sound management, offering unrivaled professional surveying experience and capabilities, producing quality products, and adhering to high standards of professional ethics using local staff committed to working in their own communities.

UNDERTAKING RESPONSIBILITIES ASSOCIATED WITH A POTENTIAL PROJECT

CobbFendley's project leadership will be supported by a qualified team of engineers and surveyors to bring a diverse array of technical expertise. The CobbFendley team will report to the Project Manager. While the Project Manager will coordinate personnel and resources needed for each assignment, the Project Principal will have the ultimate responsibility of dedicating appropriate staff to the project and coordinating their availability should additional resources be required.

PROVEN LEADERSHIP. Project Manager, Mr. Chris Almy, PE, has 17 years of civil engineering experience performing utility designs and coordinating with multiple reviewing, permitting, and funding agencies on projects throughout New Mexico. Mr. Almy is supported by engineers and experts in the fields of water supply and distribution, wastewater collection, hydraulic modeling, drainage, surveying, subsurface utility exploration, utility coordination, land acquisition, bid administration, construction management, and other technical services. Mr. Almy will provide senior leadership and guidance to project teams overseeing delivery on scope, budget, and schedule, and allocation of resources to keep projects on track.

CobbFendley's Project Principal / QA/QC Manager is Mr. Brad Sumrall, PE. Having designed infrastructure projects throughout New Mexico, Texas, California, and Utah since 1993, Mr. Sumrall has a keen understanding for the requirements to build a successful project and navigate the design, funding, and coordination processes. As Project Principal, Mr. Sumrall will provide senior leadership and guidance to project teams overseeing contract compliance, delivery on scope, budget, and schedule, and allocation of resources to keep projects on track.

CAPACITY TO HANDLE MULTIPLE PROJECTS. CobbFendley facilitates clear communication and schedule requirements through a weekly meeting where all active projects are evaluated and discussed to verify that we are maintaining schedules, budgets and deliverables as described in our executed scope of work. We understand that in some cases, funding constraints and governing body expectations can sometimes require accelerated schedules and deliverables. Should such conditions arise, our project management team confers to address schedule conflicts to reallocate resources and leverage other expertise from within CobbFendley. We have successfully addressed these conditions recently due to client demands and changes in key personnel.

PROJECT BALANCING PROCESS. Our New Mexico-based engineering team successfully manages and delivers numerous projects continuously on a daily basis. Our experienced project managers work diligently to manage schedules, staff resources, and client expectations. Our project execution and design processes incorporate the following activities:

- Establish a clear definition of project objectives in collaboration with the City so that the appropriate data is collected to support a functional and sustainable design.
- Prepare a PMP to outline and define the project scope, schedule, and budget for clear enunciation of what, why, how, when, and who is involved with project execution.
- Collect required base data including topographic, ground features, existing utility information and reference reports which form the design foundation. Our thorough data collection efforts facilitate successful engineering projects by eliminating successive field visits to obtain additional data. We also strive to provide additional information to make the engineer's job easier with the objective of designing an innovative and cost-effective solution.
- Instill a "Plan the Work/Work the Plan" mindset and process. This serves to keep our team on track, the client well informed, and produces quality deliverables for the City's benefit.

Applying these practices consistently, along with clear and effective communication, allows us to balance and maintain efficient workflow and schedules while maintaining quality.

Evaluation Criteria No. 2 (Qualifications/Competence)

YOUR DEDICATED TEAM

A. NAMES OF KEY PERSONNEL ASSIGNED TO PROVIDE SERVICES

Team Member & % of Time Assigned	Areas of Competence	Description of Experience
 Brad Sumrall, PE Project Principal NM PE #14086 **Time Assigned: 25%**	• 31 years of civil engineering project management experience • Successfully delivered projects for numerous municipalities throughout the State of New Mexico	**Strengths and Qualifications:** Mr. Sumrall has 31 years of professional water resources, land reclamation, development and master planning experience. With a background in natural resource management and civil engineering, he strives to incorporate sustainable design practices into all his projects for the benefit of the environment and the end user. Specific areas of expertise include potable water, waste water conveyance, and retrofit, reclamation and stabilization of disturbed land including mines, roadways and natural waterways, hydrology and hydraulics, MS4 compliance and storm water best management practice design and evaluation, and pedestrian trails. **Project Experience:** Dam Maintenance Plan, *City of Las Cruces, NM* • Master Drainage Plan, *City of Las Cruces, NM* • Calabacillas Arroyo HEC-HMS, *SSCAFCA, Rio Rancho, NM* • JP Shawver Park Handball Court, *City of El Paso, TX* • Striping Project, *City of Alamogordo, NM* • Eagle Nest Lake State Park Campground Improvements, *New Mexico Energy, Minerals, and Natural Resources Department (EMNRD) - State Parks Division, Colfax County, NM* • Persons Access Road, *PNM, Eddy County, NM* • Infrastructure Improvements, *Pueblo of Laguna, NM* • IDIQ Contract, *Indian Health Service, Albuquerque, NM* • Pedestrian Multi-Use Trails, *Pueblo of Laguna, NM* • On-Call Statewide Drainage Bureau, *NMDOT, Statewide, NM* • Sanitary Sewer Rehabilitation, *Pueblo of Laguna, NM* • Cabezon Multi-Family Development, *JLM Financial Partners, Rio Rancho, NM* • Loop 375 Waterline Relocation, *TxDOT, El Paso Water Utilities (EPWater), El Paso, TX* • Alameda Drain Trail Master Plan, *Bernalillo County Public Works, Albuquerque, NM*
 Chris Almy, PE Project Manager / Professional Responsible for and in Direct Charge of the Work NM PE #19120 **Time Assigned: 75%** ***Las Cruces Resident***	• 17 years of civil engineering project management experience • Experience on projects located in and surrounding Doña Ana County	**Strengths and Qualifications:** Mr. Almy has 17 years of civil engineering experience in the field of water resources. He specializes in subsurface utility exploration, UC, water supply/distribution, wastewater collection, decentralized wastewater treatment, drainage engineering, temporary erosion control, and stormwater pollution Prevention Plans (SWPPP). He has performed numerous engineering studies and prepared plans, specifications and estimates for projects throughout New Mexico. As Project Manager, Mr. Almy brings extensive experience providing technical guidance to our design teams ensuring contract compliance, delivery of scope, budget, schedule, and appropriate resource allocation. He excels in technical writing, project and team management, and agency coordination. **Project Experience:** Drainage Detention Basin, *City of Alamogordo, NM* • South Fork Arroyo Improvements, *City of Las Cruces, Dona Ana County, NM* • Striping Project, *City of Alamogordo, NM* • Vista Real Wastewater System, *Vista Real Mobile Home Community, Las Cruces, NM* • Buckeye & Iron Street Drainage Improvements, *City of Deming, NM* • Emergency Water Line Connection, *Picacho MDWCA, Dona Ana County, NM* • Johnny's Septage Facility, *Johnny's Septic Tank Company, Mesquite, NM* • F&A Septic System Design, *F&A Dairy Products Inc, Las Cruces, NM* • Market Street Drainage Study, *Town of Silver City, NM* • Wastewater Collection System Improvements, Village of Loving, NM • Berino Pond Erosion Mitigation, *Flood Commission, Dona Ana County, NM* • Ruidoso Bridges Reconstruction, *Village of Ruidoso, NM* • Water Storage System Improvements, *City of Portales, NM* • Force Main and Rockwall, *Winterhaven MDWC and SWA, Dona Ana County, NM*

Evaluation Criteria No. 2 (Qualifications/Competence)

Team Member & % of Time Assigned	Areas of Competence	Description of Experience
 Sean Wolfe, PG Officer of the Firm Responsible for Administration of the Contract *PG #10333* **Time Assigned: 20%**	• 24 years of subsurface utility exploration and survey experience • 15 years of project management experience, including 11 years of experience on projects located in Doña Ana County	**Strengths and Qualifications:** Mr. Wolfe has 24 years of experience in the subsurface utility exploration and surveying fields. As a Professional Geologist, he is uniquely suited and experienced with the geophysical equipment and techniques used in the subsurface utility exploration profession. He has completed projects for DOTs, universities, municipalities, counties, and private utilities. Mr. Wolfe has acted as Project Manager and Field Supervisor, actively participating and supervising multiple Level A and B field crews. His experience includes all levels of subsurface utility exploration activities. **Project Experience:** South Valley Drive, *City of Las Cruces, NM* • Talavera 8-inch High Pressure Gas Pipeline, *City of Las Cruces, NM* • Downtown Redevelopment Project, *City of Las Cruces, NM* • Roadrunner Parkway Extension, *City of Las Cruces, NM*
 J.R. Garcia, PE Structural Engineer Lead *NM PE #28595* **Time Assigned: 30%**	• 23 years of structural engineering experience	**Strengths and Qualifications:** Mr. Garcia has 23 years of structural design experience in bridges, buildings, retaining walls, drainage structures, industrial facilities, and seismic analysis. His building design experience includes steel framing, load bearing masonry, wood framing, cast-in-place concrete, tilt-up concrete and metal framing. **Project Experience:** Public Works and Administration Complex, *City of Seabrook, TX* • Water Plant No. 2 Improvements, *City of Shoreacres, TX* • IH 45 Canal and Siphon Improvements, *Gulf Coast Water Authority, Webster, TX*
 Brian Young, PE Electrical Design and Supervisory Control and Data Acquisition (SCADA) Lead *AZ PE #52847* **Time Assigned: 50%**	• 38 years of electrical design, instrumentation and controls, SCADA, electrical life and safety system design services	**Strengths and Qualifications:** Mr. Young has 38 years of experience in the design of electrical systems for municipal facilities, commercial and office buildings, industrial facilities, and primary electric transmission and distribution lines. As Electrical Engineer, he will provide electrical design and coordination, life safety system design, and instrumentation and controls. **Project Experience:** WRF Design Project, City of Provo, UT • Copper Basin Water Reclamation Facility, San Tan Valley, AZ • 157th Ave Water Reclamation Facility, Goodyear, AZ • Verrado Water Reclamation Facility Expansion, Buckeye, AZ • 91st Avenue Wastewater Treatment Plant, Phoenix, AZ
 Jared Canuteson, PE Computer Network Analysis for Gas Lead *NM PE #22538* **Time Assigned: 30%**	• 21 years of progressive experience in energy, land development, and municipal project management	**Strengths and Qualifications:** Mr. Canuteson has overseen various civil and oil and gas projects that included grading, paving, erosion control, storm drainage, water and sanitary sewer, water system valuation, wastewater lift stations, stormwater pump stations, green building development, build-to-suit commercial development, natural gas upstream infrastructure, gas pipelines, and Risk Management Plan (RMP) updates for processing facilities. **Project Experience:** Southeast Connector Design-Build, *TxDOT, Tarrant County, TX* • Bell District Gas Relocation, *Atmos Energy, Cedar Park, TX* • Line D, Multiple Segments, *Atmos Energy, Dallas County, TX*

Evaluation Criteria No. 2 (Qualifications/Competence)

Team Member & % of Time Assigned	Areas of Competence	Description of Experience
 Mohsen Karbakhsh, PhD, PE Computer Network Analysis for Water/ Wastewater Lead *NM PE #27062* **Time Assigned: 75%**	• 9 years of water and wastewater process treatment design and collection and distribution system modeling and design experience	**Strengths and Qualifications:** Mr. Karbakhsh is a lead project engineer and Albuquerque office manager with Water Works Engineers. He has over 9 years of experience, as well as 3 years of research experience at the New Mexico State University, where he worked on pilot scale algal bioreactors at the Jacob Hands WWTP. Mohsen's experience ranges from developing O&M and SOPs for existing facilities, to hydraulic and process modeling (Fathom, SewerCAD, BioWin, InfoWater, InfoSewer, InfoWorks ICM), GIS and mapping, condition assessment, rehabilitation/replacement, planning, funding and permitting, design and bid, and construction of water/wastewater treatment and infrastructure systems. **Project Experience:** On-Call Engineering Services, *Albuquerque Bernalillo County Water Utility Authority (ABCWUA), Albuquerque, NM* • On-Call Services, *New Mexico Water Service Company, Rio Communities, NM* • On-Call Services, *City of Deming, NM* • Various Wastewater Treatment Plants (Shiprock, Chinle, Kayenta, and Tuba City), *Navajo Tribal Utility Authority, Navajo Nation, NM* • RO Treatment and Distribution System, *Alamo Navajo School Board (ANSBI), Alamo, NM* • Surface Water Treatment Plant Preliminary Engineering Report (PER), Village of Chama, NM
 Darin Begay Mechanical Design Lead **Time Assigned: 50%**	• 16 years of experience providing mechanical engineering for pumping systems, mechanical piping, HVAC, and plumbing design projects	**Strengths and Qualifications:** Mr. Begay has 16 years of experience providing mechanical engineering in support of pumping systems, mechanical piping, HVAC, and plumbing design projects for clients throughout Arizona - including a variety of large and small-scale wastewater facilities. **Project Experience:** 157th Ave Water Reclamation Facility, *City of Goodyear, AZ* • North Water Treatment Plant, *City of Gilbert, AZ* • Copper Basin Water Reclamation Facility, *San Tan Valley, AZ* • Airport Water Reclamation Facility Expansion, *Prescott, AZ*
 Willie Roman, PE, PTOE Traffic Impact Studies and Transportation Modeling Studies and Photometrics/Street Lighting Design Lead *NM PE #16044 | NM PTOE #3524* **Time Assigned: 20%** ***Las Cruces Resident***	• 25 years of traffic engineering experience, including 10 years of project management of a multi-discipline, multi-office engineering and surveying company, and nearly 6 years with municipal government	**Strengths and Qualifications:** Mr. Roman is a Senior Project Manager with a background in both engineering and management. With 25 years of leadership and engineering expertise within the public and private sectors, his experience includes 10 years of executive management of a multi-discipline, multi-office engineering and surveying company, and nearly 6 years with municipal government where he served as Administrator of Street & Traffic Operations and also as the City's Traffic Engineer at the City of Las Cruces. While at the City of Las Cruces, he managed a large municipal operations section and oversaw day-to-day operations of Traffic Engineering, Traffic Operations (Signs and Markings, Signals, and Street lights), and Street Operations. **Project Experience:** US 82 / NM 18 Lovington (Traffic Signals and Street Lighting), *NMDOT* • IH 25 Business Loop (Street Lighting), *NMDOT* • Amador-Motel Fiber Optic Upgrade, *City of Las Cruces, NM* • West El Paso Medians Improvements (Street Lighting), *City of El Paso TX* • Phase II Lighting Improvements, *City of Sunland Park, NM* • Traffic Operations Administration (Traffic Signals, Street Lighting, Signs/Markings), *City of Las Cruces, NM*

Evaluation Criteria No. 2 (Qualifications/Competence)

Team Member & % of Time Assigned	Areas of Competence	Description of Experience
 Edward Martinez, PE Solid Waste Studies, Landfill System Design and Analysis, and Environmental Lead *NM PE #13731* **Time Assigned: 20%** ***Las Cruces Resident***	• 40 years of experience in solid waste management planning, design, closure, environmental compliance, solid waste facilities permitting, and recycling	**Strengths and Qualifications:** Mr. Martinez, PE, is the founder and President of Zia. He has an extensive background in solid waste management planning, design, closure, environmental site investigations, environmental site remediation, solid waste facilities permitting and recycling dating to the early 1980's. Mr. Martinez has also directed and/or managed investigation and/or closure of over 35 landfill facilities throughout the Southwest. He has worked closely in landfill permitting and closure efforts to pursue and manage grants and loan funds for solid waste projects. **Past Clients:** City of Las Cruces • Dona Ana County • New Mexico Environment Department • City of Albuquerque • Bernalillo County • US Department of Homeland Security • US Fish & Wildlife Service • NMDOT • US Department of Agriculture • Spaceport America • US Department of the Interior Bureau of Land Management
 Matt Cramer, PE Geotechnical Lead *NM PE #18710* **Time Assigned: 10%**	• 15 years of experience as a geotechnical and structural engineer	**Strengths and Qualifications:** Mr. Cramer, PE has 15 years of experience as engineer-of-record and project manager of geotechnical engineering services on structures, bridges, and roadway projects of all types and sizes. His experience includes working with a wide variety of clients including the public sector. **Project Experience:** O'Reilly West Side Exterior Concrete Pavement Evaluation, *Dona Ana County, NM* • Contract Drilling Services, *Las Cruces, NM* • Radio Tower Replacement, Las Cruces, NM

B. NAME, ADDRESS, TELEPHONE NUMBER OF THE PRINCIPAL MEMBER/OFFICER OF THE FIRM RESPONSIBLE FOR ADMINISTRATION OF THE CONTRACT

Sean Wolfe, PG | Senior Vice President | Mountain Region Manager

Address:
3820 Academy Parkway North NE
Albuquerque, New Mexico 87109

Phone: 505.508.0786
Fax: 505.508.0837
Email: swolfe@cobbfendley.com

SUBCONSULTANT ADDRESSES, QUALIFICATIONS, AND AREAS OF RESPONSIBILITY

GEOMAT

Responsible Addresses:
Farmington: 915 Malta Avenue, Farmington, New Mexico 87401
Albuquerque: 7901 Lorraine Ct. NM, Albuquerque, New Mexico 87113

Phone: 505.327.7928
Fax: 505.326.5721
Email: matt.cramer@geomatengineering.com

Firm Qualifications: GEOMAT is an owner-operated firm and has been serving the State of New Mexico since 2004. GEOMAT provides geotechnical engineering, geotechnical drilling services, quality assurance testing, and special inspection.

Areas of Responsibility: Geotechnical Assessment services

Evaluation Criteria No. 2 (Qualifications/Competence)

Lee

Responsible Addresses:
Las Cruces: 1990 E. Lohman Avenue, Las Cruces, 88001
Albuquerque: 8220 San Pedro Drive NE, Suite 250, Albuquerque, NM 87113

Phone: 575.640.6414
Fax: 505.338.0989
Email: wroman@lee-eng.com

Firm Qualifications: Lee is a specialized Traffic Engineering and Transportation Planning firm that has been dedicated to providing exceptional services for over 35 years. Lee's team of highly skilled engineers have focused their careers on traffic through hands-on experience and concentrated education.

Areas of Responsibility: Traffic Impact Studies and Transportation Modeling Studies and Photometrics/Street Lighting Design services

Water Works

Address:
8650 Alameda Boulevard NE, Suite 103E
Albuquerque, NM 87122

Phone: 505.210.9546
Fax: N/A
Email: mohsenk@wwengineers.com

Firm Qualifications: Water Works is a focused water and wastewater consulting firm, with over 19 years of experience and ten offices throughout the western United States. Water Works has been serving the state of New Mexico since 2011, and after establishing their Albuquerque office in 2023, Water Works is ready to expand their high-quality organic work to clients like the City of Las Cruces.

Areas of Responsibility: Electrical design, computer network analysis for water (InfoWater) and wastewater (InfoSewer), mechanical design, and supervisory control and data acquisition (SCADA) services

Zia

Address:
755 S. Telshor Blvd., Suite Q-201
Las Cruces, NM 88011

Phone: 575.532.1526
Fax: 575.532.1587
Email: ehmartinez@ziaeec.com

Firm Qualifications: Zia is a professional engineering and environmental consulting firm, headquartered in Las Cruces since 2000. The firm has experience and expertise in civil and environmental engineering, drainage analysis and stormwater and erosion control, environmental investigations and permitting, air quality, water and wastewater systems analysis, NEPA environmental compliance, RCRA investigations and remediation, land use studies and feasibility analyses, cultural and natural resources studies, environmental Phase I and II investigations, and asbestos and lead investigations.

Areas of Responsibility: Solid waste studies, landfill system design and analysis, environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City

Evaluation Criteria No. 3 (Performance of the firm)

EAGLE NEST MASTER PLAN
SOUTHERN SANDOVAL COUNTY ARROYO FLOOD CONTROL AUTHORITY (SSCAFCA) | RIO RANCHO, NEW MEXICO

REFERENCE

CONSENSUS PLANNING
Jackie Fishman, Director of Planning
302 Eighth Street NW
Albuquerque, NM 87102
505.764.9801
fishman@consensusplanning.com

Project Description: CobbFendley participated as the civil engineer in support of master planning of Eagle Nest Lake State Park in Eagle Nest, New Mexico. New Mexico State Parks required planning services to realize their vision of expanding and improving the campground and related facilities within the park. The project included engineering analysis and conceptual design of water and sanitary sewer improvements specifically for construction of a new comfort station. This included evaluation of the existing well supply and equipment needed to support the new facility. CobbFendley also performed conceptual grading to improve access and drainage within the 20-unit campground. An additional campground supporting 20 new RV spaces was also evaluated and located at an appropriate location to provide access and prevent flooding due to rainfall events.

DRAINAGE DETENTION BASIN REHABILITATION
CITY OF ALAMOGORDO | ALAMOGORDO, NEW MEXICO

David Nunnelley | Utilities Director
42 Valley View Drive
La Luz, New Mexico 88337
575.489.2274
dnunnelley@ci.alamogordo.nm.us

Project Description: CobbFendley is providing engineering and surveying services to reestablish the design volume of four existing large detention ponds that have accumulated sediment. The project scope of work consists of conducting UAV (drone) topographical surveying and grading design to re-establish the design detention volumes based on the record drawings of each pond. Mr. Almy is serving as the Project Manager and is tasked with leading the design and development of construction plans, technical specifications, opinion of probable construction costs that will be incorporated into the contract documents.

Evaluation Criteria No. 3 (Performance of the firm)

EPIA MASTER DRAINAGE PLAN

CITY OF EL PASO, EL PASO INTERNATIONAL AIRPORT (EPIA) | EL PASO, TEXAS

REFERENCE

CITY OF EL PASO/EPIA
Mr. Michael McElroy | Former Planner at EPIA, Current Lead Planner at El Paso County
800 E. Overland, Suite 200
El Paso, Texas 79901
915.346.9412
m.mcelroy@epcounty.com

Project Description: CobbFendley completed a comprehensive analysis of a 1000-acre master planned development area located on EPIA property. As a closed basin, the project was impacted by significant off-site flows generated by portions of Ft. Bliss. Flow contributions doubled the retained runoff from approximately 350 acre-feet to over 800 acre-feet. CobbFendley engineers performed the HEC-HMS analysis to verify these impacts based on previously completed analysis in support of an existing CLOMR from 2008. Mitigation design was completed using HEC-RAS to identify the hydraulic structures needed to isolate the off-site flows while evaluation of modifications to existing retention facilities within the development area was completed. A revised CLOMR was prepared to show changes in the floodplain elevation because of proposed development and changes in the existing retention containment requirements. We also completed a comprehensive Master Drainage Plan and estimate of storm water infrastructure improvements. CobbFendley performed several iterations of the infrastructure improvement requirements due to changes in the development plan during project execution.

CobbFendley held regular project team meetings to align and adjust the analysis and report as the development scenarios evolved over the course of the project. Regular updates and coordination meetings served to address this fast-moving project and adjust as development scenarios evolved. Our El Paso based project manager worked closely with our Hydrology and Hydraulics (H&H) team in Albuquerque, New Mexico, and Houston, Texas to coordinate the analysis, conceptual design, final report and FEMA CLOMR process. CobbFendley successfully met the deadline set by the EPIA for completion.

CobbFendley is proud of our **COMMITMENT TO QUALITY** *and customer satisfaction. Our business is built on repeat business, so we work to make every reasonable effort to provide services of the highest quality. From design through construction, we provide quality professionals who have a sense of ownership in the projects that we undertake and the abilities to back it up.*

CITY OF LAS CRUCES

PROJECT ASSIGNMENT AGREEMENT

23-24-051 GENERAL ENGINEERING SERVICES

PROJECT NAME

Pursuant to terms and conditions of City of Las Cruces (CITY) Contract No. 23-24-051 dated June 1, 2024 between the CITY and Cobb, Fendley & Associates,Inc. (ENGINEER), as amended and incorporated herein by reference, the City and Contractor hereby agree on this _____ day of _____, 20___, as follows:

1. In a satisfactory and proper manner, the ENGINEER shall perform SERVICES as proposed in response to the CITY's RFP No. 23-24-051 and ENGINEER's proposal as set forth in ATTACHMENT A attached hereto.

2. The estimated completion date is number days after a Notice to Proceed is issued by the CITY to the ENGINEER.

3. In consideration for the satisfactory completion of the work agreed to herein, compensation shall be made in the amount of $dollars.cents, plus NMGRT. Invoices issued by the ENGINEER shall be made monthly / upon completion of project with payment by the CITY being made within 30 days upon receipt of undisputed invoice.

EXHIBIT "C"

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Daniel B. Stephens & Associates, Inc., of 6020 Academy NE, Ste 100, Albuquerque, NM, 87109, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Daniel B. Stephens & Associates, Inc. 6020 Academy NE, Ste 100 Albuquerque, NM 87109 ATTENTION: Gundar Peterson

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

ATTACHMENT C – COST PROPOSAL FORM RFP 23-24-051 – General Engineering Services
(NOTE: This form shall not to be modified in any way)

Consulting Firm Daniel B. Stephens & Associates, Inc.

ITEM	DIRECT LABOR / CLASSIFICATION	HOURLY RATE*
1	Principal Engineer	$ 275.00
2	Project Engineer/Project Manager	$ 175.00
3	Senior Engineer	$ 215.00
4	Design Engineer	$ 150.00
5	Engineer Intern	$ 130.00
6	Engineering Technician	$ 115.00
7	Drafting Technician	$ 115.00
8	Survey Crew**	$ 300.00
9	Construction Inspector/Observer	$ 115.00
10	Administrative/Clerical	$ 110.00
11	Field Testing and Investigations	$ 140.00
		PERCENT MARKUP
12	Subcontractor Cost Markup	(%) 10%
ITEM	**MATERIALS / REIMBURSABLE EXPENSES**	**RATE**
	Travel	
13	Per Diem (per day) – Pre-Approval Required	City of Las Cruces Rate
14	Vehicle Mileage Rate (per mile)	Current IRS Rate
	Reproduction Services	
15	Black and White Copies (per copy)	$ .35
16	Color Copies (per copy)	$ .95
17	Prints 24x36 (per sheet)	$ 8.00
18	Mylars 24x36 (per sheet)	$ 15.00
19	Photo Quality Plots (per plot)	$ 8.00
	Miscellaneous	
20	Any other costs incurred	Case by Case Basis

**Rates are to include all overhead costs and any and all assessment expenses*

***Survey Crew Rates are to include GPS and Total Station Equipment*

Notes: 1. Detailed man hour Estimates are required for T&M contracts and are to utilize corresponding rates

2. Rates in place at the time a project is contracted with the City will remain for the duration of the contract.

TECHNICAL PROPOSAL FOR

General Engineering Services

RFP# 23-24-051 | Due: February 27, 2024

Prepared for

City of Las Cruces®

DBS&A

Las Cruces, New Mexico 88001

Re: RFP No. 23-24-051, General Engineering Services

Dear Selection Committee Members:

The City of Las Cruces has requested on-call general engineering services to support a wide range of potential projects. Daniel B. Stephens & Associates, Inc. (DBS&A) looks forward to continuing to serve the City and possibly expand the services we offer under our current Utility Engineering and Environmental Engineering On-Call Contracts.

DBS&A is prepared to address your need for engineering services related to water, wastewater and stormwater systems, and landfills, including planning, design, permitting, and model analysis. We also provide environmental and geotechnical assessments, groundwater monitoring, all types of regulatory documentation and reporting, expert services in judicial and quasi-judicial settings, project management, and construction services.

Las Cruces Utilities Department staff have worked with many DBS&A staff, mostly from our Albuquerque office, on projects including the Griggs-Walnut Superfund site, the Utilities Master Plan, and a number of water system improvements projects. If projects require full time resources, DBS&A can open a project office in Las Cruces.

Our proposal communicates our approach to perform the work, our experience with the services needed, the capabilities of our team, and our commitment to service and quality. Please contact us if you have any questions or require additional information.

Sincerely,

DANIEL B. STEPHENS & ASSOCIATES, INC.

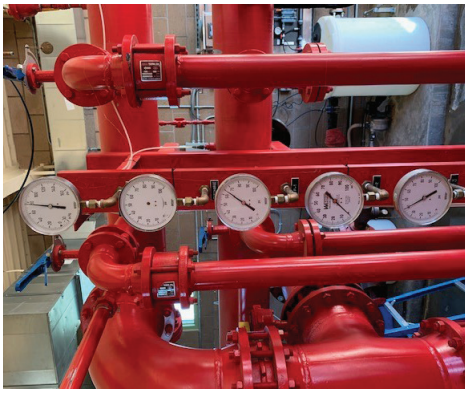
Appendix - Required Forms

RFP Compliance Declaration Form

New Mexico Resident Preference Certificate

The City of Las Cruces needs experienced engineers and other specialists to address a broad range of design and regulatory challenges. DBS&A has proven experience providing these and other services to the City. We are committed to serving the City with continuity of service, expertise in engineering, and high-quality deliverables.



1. Technical Approach

Professional, Technical, and Customary Services Provided

Daniel B. Stephens & Associates, Inc. (DBS&A) understands that project assignments under this contract will be initiated by the City of Las Cruces (City) by providing a detailed project description, including scope of work and any other special instructions needed. DBS&A has the expertise to prepare preliminary and final cost estimates; Microsoft Project schedules; complete plans and specifications; and project reports. The scope of this contract includes a broad range of general engineering services to enable the City to assign any type of engineering services on an as-needed basis. Therefore, the detailed scope of work will vary considerably between task orders.

DBS&A is accustomed to serving large multi-task programs and is frequently asked to execute projects under tight time limitations. On all projects, we prepare a detailed project management plan (PMP) that includes the project scope, budget, and schedule. The PMP is an internal management tool that can be referenced by the DBS&A team members.

Major Tasks

- Master planning
- Site development
- Electrical design
- Computer network analyses and design services for water and wastewater systems
- Supervisory Control and Data Acquisition design
- Water and wastewater utility system design and analysis
- Drainage studies, including FEMA flood studies
- Storm drainage
- Solid waste studies, landfill system design and analysis
- Environmental surveys, assessments, monitoring and management
- Geotechnical assessments
- Expert witness
- Project Management
- Construction Inspection

DBS&A regularly supports our clients through all stages of project development and execution. Our technical approach includes identifying the best qualified technical personnel from our company to execute the task at hand, implementing engineering best practices including the most appropriate technology tools, reviewing all work products by qualified reviewers, and effective communication both internally and externally. Our diverse staff includes not only engineers, but also computer-aided design (CAD) specialists, hydrogeologists and geologists, chemists, biologists, technical editors, and construction observers. We collaborate between disciplines to offer a well-rounded approach to engineering solutions.

Our general approach to engineering projects, which might include one or many of the detailed services described in more detail below, is as follows.

1. Conduct a thorough evaluation of options, or if the project concept is already in place, formalize the design criteria and basis of design.
2. Prepare the documents needed, which might include environmental documentation, calculations, engineering reports, engineered plans, technical specifications, contract documents, presentations for public meetings, etc. DBS&A specializes in providing custom, site-specific engineering design solutions that address the specified goals of our clients and project stakeholders.
3. Follow an established quality assurance/quality checking procedure. This includes identifying a qualified reviewer, keeping records of the review, and backchecking that comments are addressed, for each deliverable. We also employ a staff of professional technical editors.
4. Deploy our subconsultant resources as required. We have established relationships with subconsultants that we use on a regular basis, so that our team operates like a single company.
5. Communicate at critical project milestones with our client. These typically includes project initiation/scoping phase, kickoff meeting, milestone deliverable reviews, issuance of final documents for bidding, bid phase, pre-construction meeting, and regular progress meetings during construction.

Under our contract with the City for Utilities Engineering, DBS&A designed a booster station for the Spruce Tank.

Detailed Services Under Each Task

Our general approach and experience with services required in the request for proposals (RFP) follows.

Master Planning

Master planning for utilities provides a road map for development of the system based on evaluation and identification of deficiencies with the current system, identification of needs under a projected growth scenario, and identification of infrastructure needed to both correct deficiencies and expand service. We recently participated as a subconsultant in the City's Utilities Master Plan update, with a focus on the water system. That master plan is based on the City's comprehensive plan, "Elevate Las Cruces." Master planning of utilities based on needs and projected growth, we have worked with other New Mexico communities, including the cities of Rio Rancho, Deming, and Portales.

Site Development

DBS&A frequently prepares grading and drainage plans for development of utility sites. For the Spruce Tank booster station design, we prepared a grading and drainage plan for the existing site, including runoff and retention pond calculations in accordance with the City's Urban Drainage Criteria.

Electrical Design

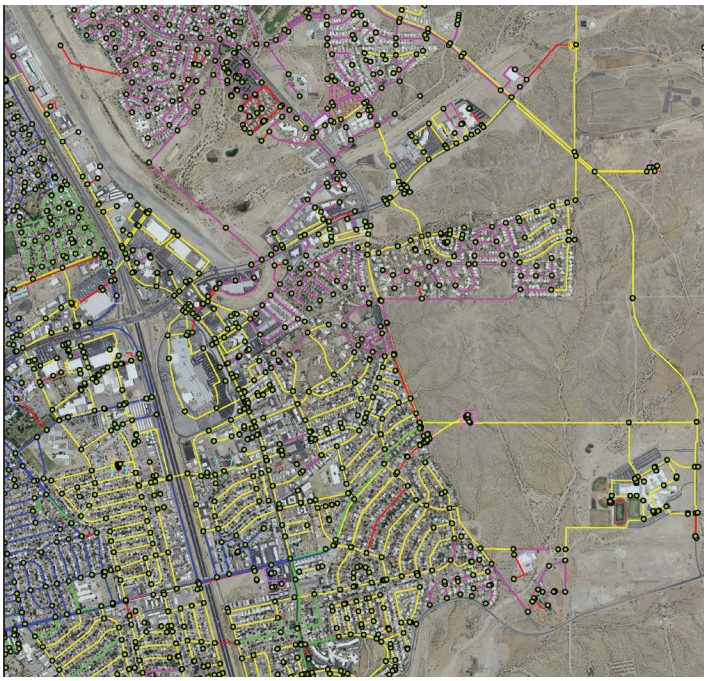
Our teaming partner, The Response Group (TRG), has worked with us on many utilities projects, including those for the City of Las Cruces. The electrical design typically includes instrumentation and control design. Projects we have partnered on include wells, booster pump stations, and entire systems such as the Hopi Regional Water System and the Los Alamos National Laboratories (LANL) Chromium project, both of which included new supervisory control and data acquisition system (SCADA) systems for overall system monitoring and control.

Computer Network Analyses and Design Services

DBS&A is very familiar with the City's computerized water model in Infowater, having updated the model in 2018 and 2023 with new pipes from the GIS database, and with new demands from billing data. Our capabilities also include stormwater and sewer modeling. We have used our modeling capabilities to support master plans for infrastructure including the City's recent utilities master plan update. Our capabilities also include design of infrastructure including pipelines and well houses; biological treatment; feasibility studies; subsurface utility exploration; construction support; and National Pollutant Discharge Elimination System (NPDES) and Stormwater Pollution Prevention Plans (SWPPP) compliance.

We understand the City operates water, wastewater and gas utilities and is responsible for stormwater compliance under the Municipal Separate Storm Sewer System (MS4) Permit. DBS&A has gained extensive experience with MS4 permitting in recent years working on behalf of the City of Albuquerque, the New Mexico Department of Transportation (NMDOT), Albuquerque Metropolitan Arroyo Flood Control Authority (AMAFCA), and the University of New Mexico to comply with the Middle Rio Grande's new watershed-based MS4 permit.

We have strong credibility with regulatory agencies governing New Mexico, including the New Mexico Environment Department (NMED), U.S. Environmental Protection Agency (EPA) Region 6, the Office of the State Engineer (OSE), and others, which makes us more effective in negotiating permit variances and other terms with these agencies on behalf of our clients.



Water model update for the City of Las Cruces

Supervisory Control and Data Acquisition design

Many of the utility projects that we design have a SCADA component. DBS&A works regularly with TRG as our electrical and instrumentation and control subconsultant on such projects. Three Las Cruces projects included SCADA integration: Well 64 equipping, the East Mesa Water Reclamation Facility Booster Pump Station, and the Spruce Tank booster pump station. During design of those projects, the City was working on standards for SCADA equipment; we met with the City's staff and received draft designs from the City's contractor for panel design to incorporate into our bid documents.

DBS&A and TRG have also worked together on projects requiring new SCADA systems, including the LANL Chromium groundwater remediation project, which included a system of multiple extraction and injection wells, piping, and booster pump station. DBS&A also worked together on a regional water system on the Hopi reservation, which utilizes SCADA for monitoring and control of wells, tanks, and booster stations.

Water and Wastewater Utility System Design and Analysis

Water System Engineering

DBS&A has supported the City in many areas under our on-call contracts. This includes a Water Stagnation Study in 2017 which included water quality sampling and analysis in the distribution system, and water quality modeling to support recommendations for optimization of chemical dosing for red water control. We have updated the model and conducted field testing (pressure and hydrant flow tests) to validate the model. We have prepared several technical memoranda and fact sheets regarding fluoride in drinking water, desalination, lead, red water, and arsenic.

With our hydrogeologic services capabilities, we routinely help utilities with well siting, well design, and construction oversight of well drilling. In addition, DBS&A is able to complete engineering design of well sites, and associated pipelines, and treatment.

DBS&A routinely prepares planning and analysis documents for water systems such as 40-year water plans, conservation plans, water audits, preliminary engineering reports, and basis of design studies.

We also prepare construction drawings, technical specifications, and bid documents and provide support during construction including on-site observations. Recent projects for which we have provided services from planning through design include the Water Authority Large Scale Recharge Project, which consists of a deep aquifer direct injection well and one shallower vadose zone well. For this project we provided planning, investigation, permitting, design, and construction oversight.

DBS&A has helped communities develop 40-year water plans that include strategies for meeting future demand, such as aquifer storage and recovery.

Wastewater Engineering

DBS&A engineers have prepared sanitary sewer and lift station capacity studies, wastewater treatment plant evaluation and wastewater treatment design.

For the City of Las Cruces, we previously performed a study to evaluate potential sources of copper, mercury, and cadmium in the influent to the Wastewater Treatment Plant. The study evaluated sources of these metals on the collection system, recommended changes to the pretreatment program, and included a successful application for modifications to the draft NPDES permit limitations of copper.

Our wastewater analysis experience includes evaluation and design of wastewater collection systems. For a proposed farmworker housing development in Ventura County, California, we compared a low pressure grinder pump system to a gravity system. For Pancho Villa State Park in southern New Mexico, we evaluated on-site wastewater disposal versus a localized sewer collection system for

continued wastewater service to the park including museum/visitor center, and RV park.

In the area of wastewater treatment, we have conducted treatment system evaluations and wastewater sampling to recommend improvements either to increase capacity or improve treatment for a number of utilities including Forest Highlands golf community in the vicinity of Flagstaff, Arizona; for the Village of Jemez Springs, New Mexico; and for Acoma Business Enterprises. We have also provided low cost nutrient removal training classes for wastewater operators around the state, under contract with NMED's Surface Water Bureau.

For the Forest Highlands golf community, DBS&A evaluated the wastewater treatment facility and recommended improvements.

Treated Effluent Reuse and Recharge

We have been involved with two flagship projects in New Mexico that involve reuse and recharge of treated wastewater effluent: the Clovis Reuse system for which we designed tertiary filtration, and provided permitting and funding assistance; and the Rio Rancho direct injection facility for which we conducted a siting study for the injection well, conducted pilot testing of advanced treatment and of the injection well, designed the full-scale Advanced Oxidation Process system, and continue to provide services for ongoing monitoring and reporting to NMED and the NM OSE.

Managed Aquifer Recharge

DBS&A has provided permitting services for all of the active recharge projects in the State. In particular we assisted the Albuquerque Bernalillo County Water Utility Authority with permitting, design and construction of both the Bear Canyon Arroyo project which recharges bank filtered river water, and the Large Scale San Juan Chama Drinking Water Project injection and vadose zone wells which recharge treated water from the surface water treatment plant.

Water Treatment Process

DBS&A has designed potable water treatment for projects from simple disinfection systems to more complex systems to remove multiple contaminants, such as the Acoma Business Enterprises system which uses sand filtration followed by reverse osmosis to remove total dissolved solids, sulfate, iron, manganese and turbidity. We have designed systems to remove arsenic and nitrate from groundwater.

For the City's Griggs-Walnut Groundwater Plume Superfund site, DBS&A designed a water treatment system that is permitted to return treated water directly to the drinking water distribution system. At the Former Y site in Clovis, where hydrocarbons are a direct threat to the municipal water supply, DBS&A designed and oversaw construction of a remediation system for extracted groundwater that discharges treated water to the City of Clovis sanitary sewer.

Drainage Studies, Including Flood Studies

DBS&A prepares drainage studies of all types, for projects ranging from utility sites to mines and landfills. Related to the Hermits Peak-Calf Canyon fire, we provided watershed-level hydrologic evaluations and assessment reports for flood mitigation, including on-site evaluations, pre- and post-fire hydrologic analysis using HEC-HMS, evaluation of engineering alternatives for mitigation of further flood impacts, and opinions of probable cost for mitigation projects.

Stormwater Engineering

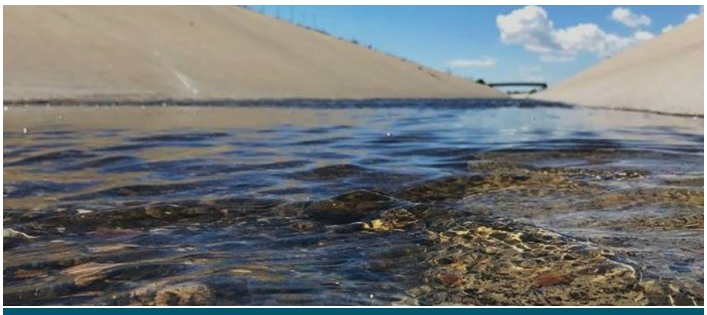
DBS&A provides services for stormwater ranging from regulatory compliance, to drainage analysis and drainage improvement design. DBS&A has played a pivotal role in assisting the co-permittees in the Middle Rio Grande watershed with MS4 compliance. We provide services to the MS4 Compliance Monitoring Cooperative (CMC), an 18-member group of agencies cooperating under the permit, the City of Albuquerque, AMAFCA, Southern Sandoval County Arroyo Flood Control Authority (SSCAFCA), and the University of New Mexico. Under the watershed-based permit, benefits to collaborating with co-permittees include extension of time to comply with permit requirements, and a reduction in water quality sampling requirements leading to lower costs. We provide water quality sampling, illicit discharge detection and elimination (IDDE) inspections, and microbial source tracking. We

prepared plans for a number of permit requirements such as the IDDE program, and the water quality monitoring program.

For the NPDES program, we prepare SWPPPs and conduct inspections during construction.

Our stormwater engineering services include drainage analysis and drainage structure design. In particular, we have considerable experience at landfills around the state, with drainage analysis and drainage design, for clients such as Southwest Landfill.

A project for which we provided services from design analysis through construction was the design and construction of Stormwater Controls at LANL. For this project, we designed an aboveground high-density polyethylene pipeline, anchored with specially manufactured rock anchors, to convey clean stormwater around a contaminated site. This project represents a measure to comply with LANL's NPDES permit which addresses legacy Solid Waste Management Units in the area.



DBS&A provides stormwater engineering and compliance services, including design of controls, water quality sampling, permitting plans, and drainage analysis and design.

Solid Waste Studies and Landfill System Design and Analysis

DBS&A supports landfill operators and hazardous waste managers by providing regulatory, scientific, and engineering solutions at hazardous and municipal solid waste landfills. Our experience includes siting, permitting, design, construction oversight, quality assurance (QA), and monitoring for facility expansions, permit modifications, and closures. We have shepherded high-profile sites through all phases of state regulatory and EPA approval. We maintain a superior record of providing value when considering clients' expectations of cost, quality, and schedule. Our public and private sector clients include municipalities, counties, private operators, the Department of Energy, and the Department of Defense.

DBS&A routinely prepares construction drawings, technical specifications, and bid documents. Our landfill engineering designs have gained high marks with regulatory agencies and withstood the test of construction implementation with contractors. In many states where DBS&A operates, our landfill liner and cover designs include slope stability analysis to evaluate the seismic risks at a particular site location. We design stormwater control systems that provide for progressive buildout as cells are developed over the life of the landfill. Our engineers take care to meet all federal, state, and local design requirements.

DBS&A has significant experience writing compliance plans, implementing the plans, and performing compliance monitoring at landfills for groundwater quality, leachate, and landfill gas emissions. We understand the latest protocols for statistical analysis of environmental monitoring data and use these procedures to lower our clients' monitoring costs. All sampling and analysis methods follow U.S. Occupational Safety and Health Administration (OSHA) standards for health and safety and conform to accepted state, federal, and industry-standard quality assurance/quality control (QA/QC) procedures.

With regard to landfill planning and design, we develop effective facility plans that maximize capacity for the capital cost invested and provide for efficient day-to-day operations. DBS&A develops plans that describe build-out, including cell layout and timelines and perform all aspects of landfill permitting from the initial siting through operation and closure permitting, including Title V air emission inventories and reporting.

Liner installation at Southwest Landfill in Albuquerque.

Environmental Surveys, Assessments, Monitoring and Management

DBS&A's experience conducting Phase I and Phase II Environmental Site Assessments (ESAs), monitoring and management of indoor air quality and asbestos includes complex, multi-facility investigations, as well as local, single-site assessments for real estate transactions, and Brownfields redevelopment. We use methods including field screening of soil, soil gas, and water quality; field x-ray fluorescence; soil borings and monitoring wells; and geophysical surveys. Our staff is also well versed in vapor intrusion studies, including evaluating impacts from solvent and fuels-based contamination. DBS&A is currently conducting a vapor intrusion study in support of the Griggs and Walnut Ground Water Plume Superfund site in coordination with the City of Las Cruces, Doña Ana County, and EPA. All field work is carried out in accordance with site-specific health and safety plans, approved work plans, sampling and analysis plans, and/or standard operating procedures to ensure that data quality objectives are met.

Geotechnical Assessments

DBS&A has extensive experience performing multi-media ESAs and investigations, including delineation and quantification of soil and groundwater contamination. DBS&A uses a broad range of techniques to identify hazardous waste sources. Identification of potential contamination sources typically involves non-intrusive techniques, such as record searches, interviews, and site visits (Phase I ESAs). Identification of actual contaminant sources typically involves intrusive field investigation, such as drilling and sampling of soil, groundwater, surface water, and subsurface vapor intrusion.

With experience at hundreds of contaminated properties, DBS&A has established a reputation for providing innovative, cost-effective solutions to address our clients' environmental challenges. We apply our understanding of regulations, permitting requirements, compliance strategies, and broad experience base to implement the appropriate solution for each site.

If required, we also have geotechnical engineers on our team who have experience with landfill closure activities, including slope stability assessments, liner and cover design, compliance monitoring, waste settlement analyses, steady-state seepage analyses, and permitting.

Expert Witness

Working closely with clients to develop effective strategies to resolve water and wastewater concerns, DBS&A experts are able to quickly integrate complex technical and legal issues to provide efficient solutions. We have provided expert support related to landfill and water system design, water rights, and water quality issues. Our experts utilize technical tools, such as databases, GIS, environmental forensics, and modeling, to perform complex technical analyses that stand up to technical and legal scrutiny. DBS&A staff members have provided expert opinions and testimony in both state and federal court.

DBS&A experts have a reputation for possessing technical integrity and offering expert opinions based on sound science. Our staff includes specialists in civil and environmental engineering, hydrology, hydrogeology, geochemistry, and contaminant fate and transport, and has presented expert testimony and deposition in dozens of cases involving water and the environment.

Primary services include:

- Providing technical assistance during litigation, mediation, settlement negotiations, or alternative dispute resolution
- Developing expert opinion reports and declarations
- Providing expert testimony and depositions
- Providing confidential consulting during all phases of dispute resolution
- Developing and managing environmental databases, courtroom exhibits, and visualizations

DBS&A routinely provides expert testimony.

Project Management

Project management comprises a set of skills to balance the constraints of scope, schedule, and budget. For any task orders assigned under this contract, we will work with the City's project manager to define the scope of work, the goals and objectives, and the desired schedule for the project. Knowing the scope and schedule, DBS&A can properly allocate resources to meet goals. Once staff resources are identified, DBS&A can develop an accurate fee estimate.

DBS&A can assist the City not only in properly scoping a particular project but also in discussions and negotiations with regulatory agencies to define critical issues and drivers for project success. Additionally, for larger projects, DBS&A will develop a QA project plan, which will detail steps taken to ensure that field work, data collected, and deliverables produced meet necessary quality standards.

Managing Schedule and Budget

DBS&A uses several tools for effective project management. Microsoft Project allows us to manage the schedule for tasks and subtasks to keep the project on track. The Deltek Vision accounting system allows us to view project charges on a daily basis to monitor and keep project budgets on track. DBS&A provides regular training to all of our project managers on use of specialized project management tools and in-house project management processes.

During all phases of a project, we monitor our progress with the assistance of the Deltek project management system or other in-house project management software. Interactive scheduling software tools help us to avoid scheduling conflicts and to adjust schedules when needed, taking into account the impacts on other planned resources and subtasks. Identifying slippage in schedules early allows for incremental corrections to be made before issues become unmanageable.

Communication

The project manager is responsible for coordinating all design activities and ensuring constant and clear communications between staff engineers, subcontractors, and client contacts during all phases of work (i.e., from scope development through invoicing). We understand that utility project requirements can change based on agency priorities, public input, and other factors, requiring clear communications for successful completion. The proposed project manager, Jennifer Hill, has many years of experience managing large and diverse project teams for public sector clients, and will facilitate communication between all stakeholders as changes arise.

Quality Assurance

When we develop the Project Management Plan for a specific project, we identify the reviewer(s) for each discipline and assign a senior professional to do coordination review. Overall quality assurance for this contract will be the responsibility of the Principal-in-Charge.

DBS&A will prepare all technical documents with review and approval by appropriately licensed professionals, and engineering drawings and specifications will be sealed by a New Mexico registered professional engineer. As needed by a particular project, we can provide observation of construction contractors for activities at project sites. Full-time staff can be allocated to City projects, with both professional staff and technicians available on a day to day basis, at a project site for the duration of the project.

For the new Hopi Regional Water System, DBS&A provided planning and design services, bidding assistance, construction observation, and startup assistance.

Construction Inspection

DBS&A has substantial experience providing construction inspection and oversight services on behalf of our public-sector clients. Projects for which we have provided services from planning, through design, construction, and startup, include the Hopi Regional Water System Project, the Bureau of Indian Affairs Keams Canyon Water System Improvements, replacement Well E1 for LRGPWWA, and

supply wells for Slippery Rock Ranch and Hopi Hart Ranch. Other projects for which we provided on-site observation include the LANL Chromium Remediation Pipeline Project and the City of Rio Rancho Direct Injection Well. We also provided oversight services for the City of Las Cruces for construction of the Griggs-Walnut Superfund Site water treatment system.

Groundwater pump-and-treat system for the Griggs-Walnut Superfund Site

During these projects, DBS&A worked closely with the Owner's staff to provide cost-effective construction support; coordinated with staff to complete day-to-day inspections; reviewed pay applications, Requests for Information (RFIs), and contractor submittals; attended construction meetings; and provided Record Drawings.

In the last five years, DBS&A was the prime contractor for ten separate construction projects for NMED's Petroleum Storage Tank Bureau (PSTB). For these projects, we performed a variety of tasks in this role:

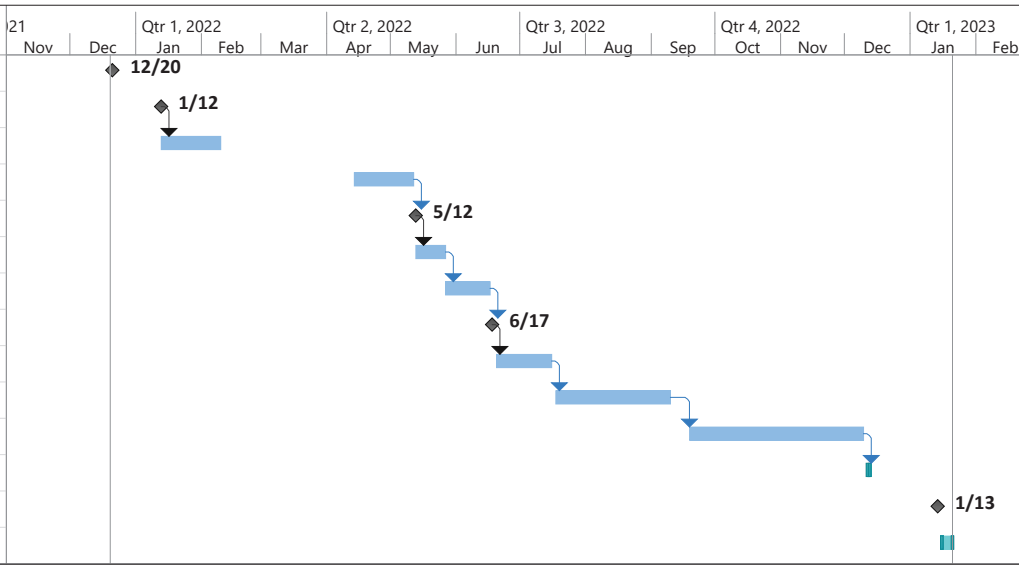
- Solicited bids from various contractors
- Evaluated bids and recommended contract awards
- Coordinated with subcontractors
- Reviewed pay applications
- Responded to contractor submittals and RFIs
- Ensured completed work complies with design documents
- Coordinated connection of utilities to new facilities
- Performed and reported results of compliance testing and sampling
- Managed startup/shakedown
- Operated and maintained remediation systems

We know that a solid design with the appropriate attention to detail results in the best bid prices—it is the uncertainties in design details that cause bidders to raise costs to cover unknowns. We also know, based on experience, that prompt, constant communication between Contractor, Owner, and Engineer is critical to keep projects on schedule and within budget and to minimize change orders.

Typical Project Schedule/Timeline

Shown below is a typical engineering project schedule completed by DBS&A.

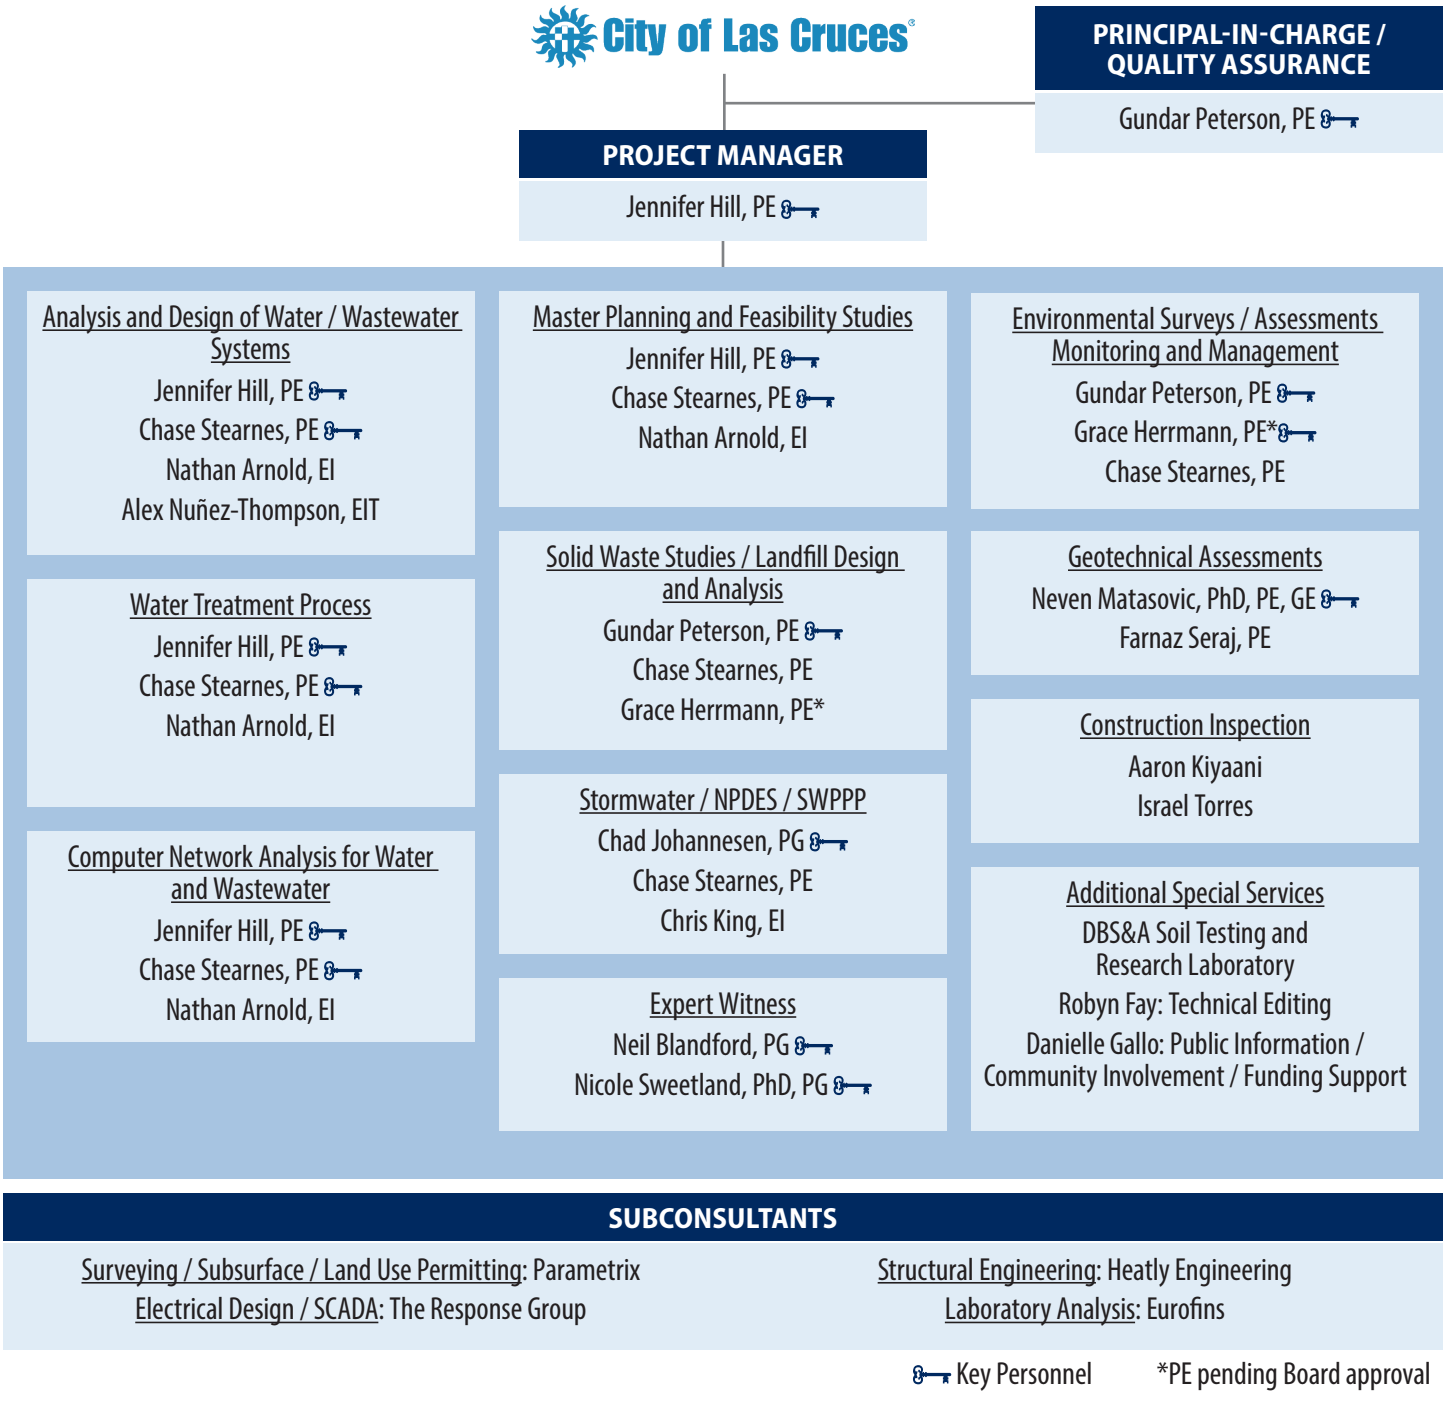
D	Task Name	Duration
1	Notice to Proceed	1 day
2	Site Visit	1 day
3	Technical Memorandum	4 wks
4	60% Design	4 wks
5	60% Submittal	1 day
6	Client/Agency Review	2 wks
7	Final Design	3 wks
8	Final Submittal	1 day
9	Contractor Quotes	1 mon
10	Procurement	2 mons
11	Construction	12 wks
12	Substantial Completion	1 day
13	Final Completion	1 day
14	Project Close-out	5 days



2. Qualifications/Competence

A. Key Personnel

As described in the RFP, the scope of services to be addressed under this contract includes a broad range of general engineering services to enable the City to assign any type of engineering services on an as-needed basis. Our proposed project team includes resources in many different engineering disciplines. However, we expect the City may have needs that at times are best served by specialized resources that we will draw on as needed. In this case, DBS&A will look to our relationships in the professional community to bring in outside expertise.



Bios of Key Personnel

Following are biosketches of key personnel for this contract.

Gundar Peterson, PE

Principal-in-Charge

Mr. Peterson is a principal engineer and DBS&A's New Mexico Operations Manager. He will serve as Principal-in-Charge, and as such will ensure that sufficient and appropriate resources are allocated to the City's projects. Mr. Peterson holds a BS in civil engineering and is a professional engineer licensed in New Mexico, Texas, Arizona, and several other states in the western U.S. He has 28 years of professional experience in the environmental industry, specializing in environmental assessment, investigation, and remediation at hazardous waste sites, landfill permitting and design, surface water runoff, and erosion protection. He served as DBS&A's Project Manager for the remedial design and remedial action at the Griggs-Walnut Groundwater Plume Superfund Site in Las Cruces. Additionally, he has experience in remedial design and cost estimating for large-scale excavation and remediation projects and has served as a project manager on a variety of projects for federal, state, and commercial clients.
Percent Time Assigned to Contract: 2%

Jennifer Hill, PE

Project Manager

Ms. Hill is a senior engineer who specializes in water and wastewater utility projects from planning through design and construction. She holds a BS in civil engineering from Florida International University and has 32 years of experience, including extensive project management experience. Her utility experience includes modeling, audits, asset management plans, master planning, design and construction. She has supported City projects including the water component of the Utilities Master Plan and design of the Well 64 Equipping and Pipeline, East Mesa Water Reclamation Facility Booster Pump Station and Spruce Tank Booster Pump Station.
Percent Time Assigned to Contract: 20%

Nicole Sweetland, PhD, PG

Expert Services

Dr. Sweetland has 30 years of experience and specializes in hydrogeology, environmental forensics, and contaminant fate and transport. She provides expert and confidential consulting support on projects involving evaluation of soil and groundwater impacted by chlorinated solvents, petroleum hydrocarbons, and emerging contaminants. She worked on behalf of the City of Las Cruces during the Griggs and Walnut Ground Water Plume Superfund site feasibility study. She also supported the City in developing strategies to respond to the EPA's Unilateral Administrative Order.
Percent Time Assigned to Contract: 2%

Chad Johannesen, PG

Stormwater Regulatory Compliance

Mr. Johannesen has 19 years of experience in stormwater quality permit compliance; soil, surface water, and groundwater sampling; and operation and maintenance (O&M) of field instrumentation including physical measurements of precipitation, surface water, and groundwater. He has also performed well drilling and installation oversight; pump test analysis; soil, soil gas, surface water, and groundwater sampling; O&M of remedial pumping systems; and investigation-derived waste management.
Percent Time Assigned to Contract: 10%

T. Neil Blandford, PG

Expert Services

Mr. Blandford specializes in water supply investigations and water rights analysis, numerical modeling of groundwater flow and contaminant transport, groundwater planning, computation of the effects of groundwater pumping on surface water, hydrogeologic evaluations, wellhead protection area delineation and source water determination, well field design, and expert testimony in water rights cases.
Percent Time Assigned to Contract: 2%

Chase Stearnes, PE
Engineering

Mr. Stearnes is a registered PE whose experience includes regulatory compliance for public water systems and remediation sites, analysis and report writing, preparation of design plans and specifications, remediation system O&M, and water quality monitoring. He has assisted with annual reporting for the Griggs-Walnut Groundwater Plume Superfund Remediation project. He has supported water system improvements for the LRGPWWA and a preliminary engineering report for the City of Deming's water system. A Certified Water Supply Operator, Level 3, he coordinates drinking water operations and regulatory compliance for 12 public water systems in New Mexico and Arizona.
Percent Time Assigned to Contract: 30%

Nathan Arnold, EI
Engineering

Mr. Arnold is a registered engineering intern in civil engineering with a background in water resources, including water and wastewater system improvements, hydraulic modeling, and infrastructure design. He has experience in developing engineering estimates of probable construction costs, preliminary engineering reports, asset management plans, and construction documents. Mr. Arnold utilizes various programs for modeling and design, including Water CAD, InfoWater, InfoSewer, GIS technology, and AutoCAD Civil 3D.
Percent Time Assigned to Contract: 30%

Grace Herrmann, PE*
Engineering

Ms. Herrmann is an engineer who supports a wide variety of projects, including remediation, environmental compliance, safety engineering related to hazardous waste, water conservation, and solid waste. She currently co-manages and executes the annual reporting for the Griggs and Walnut Ground Water Plume Superfund site under the current On-Call Environmental Engineering Services contract.

*PE, pending Board approval

Ms. Herrmann's experience includes field coordination and monitoring of remedial systems, writing work plans for asbestos sampling and abatement projects, and assisting with design and permitting of municipal landfills. She also provides project management and construction observation services. Ms. Herrmann's background includes New York State Department of Health asbestos contractor/supervisor training and refreshers annually.
Percent Time Assigned to Contract: 10%

Christopher King, EI
Engineering

Mr. King is a registered engineering intern supporting a variety of projects, including municipal water and wastewater projects, landfill permitting and design, and stormwater management. His project experience ranges from design to construction observation and system operation. He specializes in engineering tools such as AutoCAD (including Civil 3D), EPANET, and HEC-RAS. He also has experience in the design and construction observation of stormwater infrastructure, having worked extensively on the Valencia Regional Landfill Stormwater Improvements Project.
Percent Time Assigned to Contract: 20%

Neven Matasovic, PhD, PE, GE
Geotechnical Engineering

Dr. Matasovic has over 35 years of experience with engineering design, analysis, permitting, and construction-related projects, including 30 years of experience with Brownfield investigations and landfills. His expertise includes direction of a wide range of site exploration and laboratory testing programs, interpretation of in-situ and laboratory testing results, waste settlement analyses, steady-state seepage analyses, and two- and three-dimensional slope stability assessments conducted in support of site closure and landfill liner and cover design in areas of high seismicity. He is a co-author of the EPA seismic design guidance for municipal solid waste landfills, the 11th Peck Lecture Paper: Pre-Design Geotechnical Investigation for the Operating Industries, Inc., Landfill Superfund site.
Percent Time Assigned to Contract: 2%

B. Principal Responsible for Administration

Gundar Peterson, PE
6020 Academy NE, Suite 100
Albuquerque, New Mexico 87109
(505) 263-2978
Registered PE No. 16038, New Mexico

List of Subcontractors

Parametrix

9600 San Mateo Boulevard NE
Albuquerque, New Mexico 87113
(505) 821-4700
Area of Responsibility: Surveying
Qualifications: Provides survey services throughout New Mexico.

Heatly Engineering

120 Vassar Dr SE, Suite 200
Albuquerque, NM 87106
(505) 705-1355
Area of Responsibility: Structural Engineering
Qualifications: Scott Heatly has over 30 years of experience in structural engineering and construction.

The Response Group

6705 Academy Road NE, Ste B
Albuquerque, NM 87109
(505) 323-7629
Area of Responsibility: Electrical Engineering
Qualifications: Provides electrical engineering and instrumentation and control design. DBS&A and TRG have worked together on many projects over the past 20 years.

Eurofins (formerly Hall Environmental Analysis Laboratory)

4901 Hawkins Street NE
Albuquerque, New Mexico 87109
(505) 345-3975
Area of Responsibility: Analytical/Laboratory
Qualifications: Certified by the National Environmental Laboratory Accreditation Program and the NMED. Has provided DBS&A with outstanding service and high-quality laboratory analysis for more than 10 years. Currently a subcontractor to the NMDOT providing laboratory services.

C. DBS&A Office Locations for this Contract

Albuquerque Office

6020 Academy Road NE, Suite 100,
Albuquerque, New Mexico 87109
Percentage of Work by this Office: >98%

Santa Barbara Office

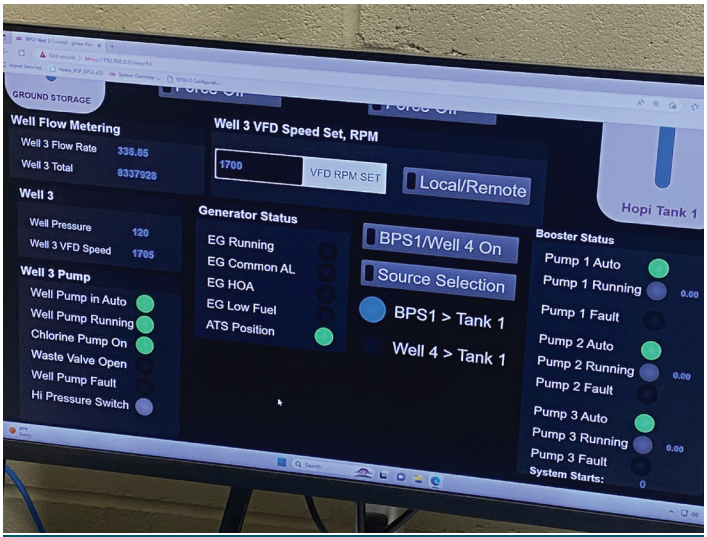
3916 State Street, Suite 1A
Santa Barbara, California 93105
Percentage of Work by this Office: <1%

Costa Mesa Office

3150 Bristol Street, Suite 210
Costa Mesa, California 92626
Percentage of Work by this Office: <1%

D. Professional Responsible for Work

Jennifer Hill, PE
6020 Academy NE, Suite 100
Albuquerque, New Mexico 87109
(505) 688-4201
Registered PE No. 19055, New Mexico



For the new Hopi Regional Water System, DBS&A worked with The Response Group who provided electrical and controls design, including SCADA.

3. Performance of the Firm

For nearly 40 years, DBS&A has performed engineering services for New Mexico communities to help them address water and wastewater supply development, treatment, and conveyance. DBS&A's Albuquerque headquarters is our largest office and includes a soils testing laboratory, which performs analyses of the hydraulic properties of soils in addition to standard geotechnical testing. Whether routine or complex, our solutions to engineering problems have consistently met or exceeded client goals and regulatory requirements. DBS&A has successfully completed multiple projects encompassing the wide range of services that may be needed by the City.

Similar Contracts

The following projects showcase our experience relevant to the scope of this RFP. All work was performed within budget, on schedule, and of quality to the satisfaction of the client. References are included with each project profile.

Albuquerque Bernalillo County Water Utility Authority On-Call

Albuquerque, New Mexico

DBS&A holds an on-call contract for Water and Wastewater Plant work for the Albuquerque Bernalillo County Water Utility Authority. Under this contract we updated record drawings for their Station 70 ferric chloride dosing station, which had been modified several times over the years without a comprehensive set of record drawings. We also provided construction services for the Large Scale Recharge project at the San Juan Chama Drinking Water Plant. Our portion of design of this project included one deep injection well and one shallower vadose zone well designed to recharge river water during low-demand times of the year for recovery in the future.

Contact: Diane Agnew, Water Rights Program Manager, ABCWUA; (505) 289-3008

On-Call Engineering Services for New Mexico State Parks

Statewide, New Mexico

The Energy, Minerals and Natural Resources Department (EMNRD), State Parks Division (Division) needed engineering assistance for evaluation and design of water and wastewater systems serving the 35 state parks, including campgrounds.

One task order was for a feasibility study on composting toilets (CT). The CT study included a review of the various types of composting toilets; a survey of usage in the parks of neighboring states; recommendations for site built or manufacturer-built units; design criteria, plans, and specifications; development of an O&M manual; comparison of O&M costs for existing vault toilets versus CT use; and recommendations for waste disposal.

At the Pine Campground at Navajo Lake State Park, DBS&A prepared plans and specifications for upgrades to two lift stations and associated piping. The project also included permitting applications and reports for approval by the NMED, engineer's opinion of probable construction costs, and estimation of costs for construction management.

At Pancho Villa State Park in the Village of Columbus, DBS&A evaluated alternatives to collapsed and leaking septic tanks. The existing deteriorated systems prompted closure of comfort stations and the dump station. DBS&A examined alternatives for improvements, comparing replacement of septic and holding tanks to connection to the Village sewer system, on-site wastewater disposal with constructed wetlands for wastewater polishing and recreational

opportunities, and a new comprehensive wastewater collection system with off-site conveyance of wastewater. DBS&A is now providing design of the centralized wastewater collection system, abandonment of on-site disposal systems, and a lift station to pump wastewater to the Village sewer system. We will provide construction phase, and post-construction services.

Pancho Villa State Park

At the Cottonwood Campground at Navajo Lake State Park, DBS&A performed a hydrogeologic study, a geotechnical investigation, and design for a new surface water treatment system. We are preparing bid documents including plans and specifications and will assist with bidding services, permitting assistance, and construction management.

Septic tank systems at Villanueva State Park, City of Rocks and Bottomless Lake State Park needed evaluation and probable replacement. At Villanueva State Park, the system had been affected by roots from nearby cottonwood trees. At Bottomless Lakes State Park, leaks resulted in unpleasant odors to nearby residents, and a disposal field was suspected as being inadequate. In addition, septic tanks at the City of Rocks Visitor Center showed signs of sulfide corrosion. DBS&A conducted site visits, prepared evaluation reports and will provide final design of replacement systems, including permit applications to NMED's Liquid Waste Bureau.

Contact: Randolph Bayliss, Project Manager, EMNRD State Parks Division; (505) 670-0544

Hazardous Material Investigation Services On-Call

Statewide, New Mexico

DBS&A has supported the NMDOT for more than a decade, including an on-call contract for Hazardous Materials Investigation services throughout New Mexico. Services include Initial Site Assessments (ISAs), Preliminary Site Investigations (PSIs) and Detailed Site Investigations (DSIs), leaded paint and asbestos-containing building material (LP/ACBM) surveys and other related work required by the contract. Many of these services include passive and active soil gas surveys for the presence of volatile organic compounds, X-ray fluorescence (XRF) to determine the concentration of various metals within soil matrix samples, geoprobes to delineate soil and groundwater contamination, and the use of larger drilling rigs for the advancement of soil borings and installation of groundwater monitor wells. During oversight of asbestos abatement, ambient air monitoring is performed in compliance with Asbestos Hazard Emergency Response Act (AHERA) 40 CFR 763.90, in adjacent areas to determine effectiveness of environmental controls.

Representative projects include:

- ISA for three roadway corridors (NM 460, NM 478, and Elm Street) in Anthony
- DSI for US 64/US 550 Reconstruction Project in Bloomfield
- ISA and PSI for the Coors Boulevard Corridor Project in Albuquerque
- ISA for Paseo de Oñate Corridor in Española
- ISA for NM 14 (Cerrillos Road) Corridor in Santa Fe
- PSI and DSI for NM 68 in Taos
- Preliminary Initial Site Assessment for the I-40/McCarty's Interchange in Cibola County
- ISA, and Phase I and II ESA for the I-40/Coors Road Interchange in Albuquerque
- PSI for NM Highway 63 in Pecos
- Phase I ESA at the intersection with US 70 and US 285 and Oscura Road in Roswell

Contact: Larry Kemp, Project Manager, NMDOT; (505) 222-9565

Cost Proposal

As requested, costs have been included in a separate file. For this contract, the markup on subcontractors and supplies is set at 10 percent. This markup covers the administrative costs and potential liability associated with subcontracting work.

Conclusion

DBS&A values our relationship with the City of Las Cruces and looks forward to continuing to support the City on a variety of projects from planning and analysis, through design and construction. Our capabilities in science and engineering, with a firm base in hydrogeology and a proven reputation in regulatory compliance, provide a unique set of skills that will benefit the City.

Under contract with Lea County, DBS&A designed a 40,000-gallon storage tank to provide additional water storage for the Mescalero Ridge Water Cooperative which serves Maljamar, New Mexico.

PROJECT ASSIGNMENT AGREEMENT

23-24-051 GENERAL ENGINEERING SERVICES

PROJECT NAME

Pursuant to terms and conditions of City of Las Cruces (CITY) Contract No. 23-24-051 dated June 1, 2024 between the CITY and Daniel B. Stephens & Associates, Inc. (ENGINEER), as amended and incorporated herein by reference, the City and Contractor hereby agree on this _____ day of _____, 20___, as follows:

1. In a satisfactory and proper manner, the ENGINEER shall perform SERVICES as proposed in response to the CITY's RFP No. 23-24-051 and ENGINEER's proposal as set forth in ATTACHMENT A attached hereto.

2. The estimated completion date is number days after a Notice to Proceed is issued by the CITY to the ENGINEER.

3. In consideration for the satisfactory completion of the work agreed to herein, compensation shall be made in the amount of $dollars.cents, plus NMGRT. Invoices issued by the ENGINEER shall be made monthly / upon completion of project with payment by the CITY being made within 30 days upon receipt of undisputed invoice.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called "CITY" and HDR Engineering, Inc., of 1917 S 67th St, Omaha, NE, 68106, hereinafter called "CONTRACTOR".

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment "A") during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY'S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY'S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	HDR Engineering, Inc. 1917 S 67th St Omaha, NE and 68106 ATTENTION: Peter Brakenhoff

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments
A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:
1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements
A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:
1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.

c. A statement of the billing procedures including minimum billing units, if any.
d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables

Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.

1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

D. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

E. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

Cost Proposal - Attachment C

20	Any other costs incurred	Case by Case Basis

**Rates are to include all overhead costs and any and all assessment expenses*

***Survey Crew Rates are to include GPS and Total Station Equipment*

Notes: 1. Detailed man hour Estimates are required for T&M contracts and are to utilize corresponding rates

2. Rates in place at the time a project is contracted with the City will remain for the duration of the contract.

Rate Schedule Assumptions & Clarifications

HDR provides the following assumptions and clarifications of our cost rate schedule:

1. Rates are subject to annual increase.
2. Rates do not include New Mexico Gross Receipts Tax.
3. Direct expenses to be invoiced at cost.
4. Sub-consultant fees to be determined on a task order basis and will be invoiced at cost plus 10% mark-up.

General Engineering Services Technical Proposal

City of Las Cruces RFP No. 23-24-051

CITY OF LAS CRUCES

RFP COMPLIANCE DECLARATION

RFP TITLE: **General Engineering Services**

RFP NO.: **23-24-051**

DUE DATE/TIME: **February 27, 2024 / 4:00 p.m.**

In compliance with the requirements of this RFP, I, the undersigned, offer and agree to furnish any or all materials and/or services to the City of Las Cruces within the time agreed.

I further certify that this company has not been debarred, suspended, or otherwise made ineligible for participation in Federal Assistance programs under Executive Order 12549 Debarment and Suspension as described in the Federal Rules and Regulations.

Receipt of Addenda Nos.: 1 is hereby acknowledged (where none received, place a zero in this space)

FAILURE TO INCLUDE WILL SUBJECT RESPONSE TO REJECTION

Evaluation Criteria No. 1 - Technical Approach

Since 1917, HDR Engineering, Inc. (HDR) has been delivering professional engineering services to clients around the globe, adding value to local communities, pushing boundaries, and uncovering new possibilities. We bring to the City of Las Cruces (the City) a full service team to support your program. HDR's team brings proven task order management processes to support the City to keep your program on schedule and budget. Our team provides a deep bench of experts who can deliver multiple tasks simultaneously and at every stage of the project life cycle. Additionally, as necessary/directed, HDR can support the City with additional services beyond those identified. It is our intent to support your task orders out of our Albuquerque office supplemented by professional resources in the region.

HDR fundamentally believes that quick response and task order turnaround are essential for on-call task orders. Our ability to swiftly execute these tasks is underpinned by:

- Extensive in-house engineering service capabilities, reducing negotiation, startup, and external coordination time.
- A history of successfully collaborating with clients and associated stakeholders for successful project delivery.
- Comprehensive knowledge of all local, state, and federal regulations and standards relevant to professional design and construction services.
- An experienced team prioritizing high-quality, on-call deliverables with quick turnaround times.
- Familiarity with Las Cruces, as our Task Order Manager and various Team Members are from the area and/or attended New Mexico State University.
- In-house constructibility review and construction inspection/administration services.

HDR has been serving the New Mexico area successfully since 1985 providing engineering services that include the experience and disciplines identified in the Scope of Services outlined in the Request for Proposal (RFP). HDR offers a wide range of engineering services for multifaceted projects, including public utilities, transportation facilities, storm drains, parks, athletic fields, and building structures.

FOUNDED in 1917, HDR has

12,500+
Employees Worldwide

250+
Offices Globally

2023 ENR Top 500 Design Firms Rankings

No. 6 Top 20 in Design Firms
No. 5 Top 20 in Transportation
No. 5 Top 20 in Water
No. 6 Southwest Top Design Firms

Our in-house services, as requested in the RFP, include:

- Master Planning
- Structural design of buildings, retaining walls, etc.
- Roadway, transportation, and parking lot design
- Site development (drainage and grading design)
- Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
- Computer network analysis for gas (GasWork), water (InfoWater), and wastewater (InfoSewer), with software updated for compatibility with the City.
- Supervisory Control and Data Acquisition (SCADA) design
- Mechanical design, gas system design, plumbing, and HVAC design
- Water, wastewater, and natural gas utility system design and analysis
- Traffic impact studies and transportation modeling studies
- Photometrics/street lighting design
- Drainage studies, including FEMA flood studies
- Storm drainage
- Solid waste studies, landfill system design and analysis
- Environmental surveys, assessments, monitoring, and management
- Geotechnical assessments
- Expert witness services in judicial and quasi-judicial settings
- Project management
- Construction inspection

How HDR Will Perform the Services

HDR's team offers the City knowledge and experience to deliver high-quality services and deliverables through this on-call contract. Our technical team's practical expertise and competence will produce design solutions to meet the individual goals of each task order under this contract. Our experience on a variety of multifaceted, infrastructure projects allows us to develop a detailed approach to any given task. In addition, we use the following guidelines as a foundation when developing a task-specific approach:

- Develop innovative and cost-effective solutions that enhance project benefits
- Develop flexible and realistic solutions that can be staged to best utilize available funding resources
- Provide a responsive, motivated, and experienced team of professionals that will perform individual tasks in a timely manner

On-call tasks typically have condensed budgets and expedited schedules. We can accommodate these challenges because we have developed a work plan that is structured to utilize our staff and resources to achieve a responsive and professional result for you. We are dedicated to meeting your expectations while maintaining

the schedule and budget of your projects. Valuable knowledge has been gained through previous and current on-call tasks with state and local agencies that required similar services. We have taken great care in developing an efficient management approach for this contract. Our approach provides:

- A primary point of contact, **Peter Brakenhoff, PE** will be accountable and focused on technical competence, cost, and schedule control.
- Our **Task Order Manager, Paul Molina, PE** will be responsible for managing all task orders and organizing the best team to meet the City's needs.
- Senior professionals independently responsible for quality control (immediately available to provide input and technical review for each required discipline).
- A flexible organizational work plan that can be refined and optimized based on actual contract requirements and task assignments
- Constant and continuous communication, and collaboration with the City's staff

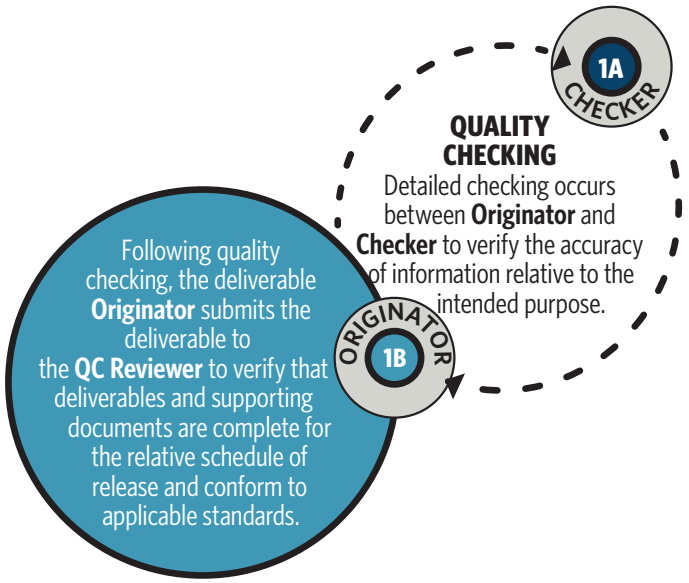
Our work plan facilitates the project task order process for typical assignments, which has been structured to best utilize our staff and company resources, and maintains HDR's responsiveness for successful results.

Integrated Quality Approach. Our goal is to set the industry benchmark for excellence by staying true to our purpose and exercising discipline in the services we provide to our clients. It is our policy to consistently provide professional services that satisfy statutory, regulatory, and technical requirements, and that meet or exceed your expectations. To achieve quality in our work, we have developed a QMS based on the fundamental principles and guidelines set forth by the ISO 9001:2015 series of international standards for quality management.

Integrated QMS Produces High-Level Results. Through an integrated QMS approach to quality, we focus on the stability and efficiency of feedback loops, and evaluate mechanisms to make sure our internal processes are meeting our business and client needs. **HDR has a strong history of providing quality services in the delivery of general engineering contracts.** This is the result of understanding your standards and expectations, having consistent approaches and procedures on all of our projects, and taking pride in what we do. We recognize that adherence to schedule and budget for tasks is key to delivering this contract successfully. We have designated multiple key technical experts that will be called upon to provide extensive quality reviews, enabling us to consistently meet our schedules and budgets.

HDR team members will work closely with **Paul Molina, PE,** to develop quality plans tailored to each separate task, facilitate proper coordination among team members, and oversee the accuracy and quality of deliverables. We will build our schedules with the City's expectations and quality in mind. Additionally, each quality lead will follow our internal QMS manual. They will be dedicated to checking for accuracy and verifying that deliverables meet your terms.

QC Review Process



Major Tasks to be Accomplished

For more than a century, HDR has partnered with clients to shape communities and push the boundaries of what is possible. Our engineering, architecture, environmental, and construction services bring an impressive breadth of knowledge to every project. Our optimistic approach to finding innovative solutions defined our past and drives our future.

Our Albuquerque office has been serving New Mexico municipalities, counties, and state agencies since 1985. It is our intent to complete all design work for the various tasks from our Albuquerque office. The HDR team has regional and national resources that can be leveraged to address any unforeseen conditions.

HDR has completed many infrastructure projects throughout the State of New Mexico. Our recent experience completing projects (see list below) for state agencies, counties and municipalities, gives the HDR team a unique perspective for your general engineering service needs.

- On-Call Contracts: NMDOT Engineering Highway Safety Improvements, Traffic Engineering, Drainage Engineering, Staff Augmentation, Statewide General Engineering (State and Federal Funding), Bridge/Structural Inspection, and Bridge Design Services
- On-Call Contracts: City of Rio Communities
- I-10/University Ave. & Main Street Bridge Rehabilitation, Las Cruces
- I-25 Lemitar Interchange Project, Las Cruces
- I-25 Missouri Ave Reconstruction Project, Las Cruces
- NM 264 Phase A/B Study and Final Design
- NM 4 Corridor Study and Final Design, Pueblo of Jemez
- I-40/Manuelito Canyon near Gallup
- NM 371, I-40 to US 64 (Thoreau to Farmington)
- I-25 Widening from Jefferson to San Antonio, Albuquerque
- US 60/84, Reconstruction Projec in Clovis
- I-10/I-25 Interchange Reconstruction Project, Las Cruces
- I-10 Corridor Study, Preliminary & Final Design (I-10/I-25 to Texas)
- City of Rio Communities, Streetlight Safety Plan
- NM 84/285 (Bridge Engineering and Traffic Signals and Lighting)
- US 64/SR 504 Shiprock Road Safety Audit
- Rio Grande Gorge Parking Lot and Suicide Deterrent System Study
- NM39 Harding, Environmental Services
- NM 102 Roadway and Bridge Reconstruction Project

Detailed Statement of Services Provided Under Each Task

HDR is a multidisciplinary Architectural and Engineering firm with extensive resources and capability to complete any type of project and full-service capability with transportation, drainage, utility, and facilities disciplines and on-call experience. The City will benefit from HDR's proven track record of responding quickly and effectively with innovative and creative solutions to any type of engineering need while staying on schedule and within budget. We have organized a project team with unmatched expertise to provide the City with innovative, technically feasible, cost-effective, and practical solutions to all the professional services listed in the RFP project descriptions. We will leverage our planning, design, and construction experience to work collaboratively with the City and deliver the projects with efficiency and consistency, ultimately resulting in time and cost savings.

Scope of Services:

Master Planning

HDR is dedicated to providing comprehensive master planning services to the City, aimed at fostering sustainable growth in line with the City's goals. Led by **Paul Molina, PE,** our approach includes extensive data collection and analysis on land use, infrastructure, demographics, and environmental factors. We conduct visioning workshops with city officials and stakeholders to establish a clear vision and achievable goals. Our team develops a balanced land use plan, proposes infrastructure and transportation improvements, and integrates sustainable planning principles for climate resilience. A detailed implementation plan will outline steps for realization, including phasing, funding, and governance. We ensure community engagement for transparency and consensus-building. With extensive experience in master planning for municipalities across New Mexico and the country, our multidisciplinary team is skilled at navigating complex planning challenges and tailoring our approach to each community's unique needs.

Bernalillo County Bridge Blvd. Corridor Design Workshop/ Charrette and Steering Committee

Structural design of buildings, retaining walls, etc.

HDR provides top-notch structural design services for bridges, buildings, retaining walls, and other structures in the City, verifying safety, durability, and compliance with relevant codes and standards. Led by **Danton Bean, PE**, and **Chad Zimmerman, PE**, our team has a proven track record in delivering innovative and cost-effective solutions for a diverse range of projects. Our expertise extends to various materials and structural systems, covering bridge design and foundations, bridge inspection and rating, rehabilitation, bridge scour analysis, concrete segmental bridges, curved girder bridges, historic renovation, long-span girder, arch, truss, and cable-stayed bridges, movable bridges, pedestrian bridges, railroad structures, seismic retrofit, short-span bridges, specialty wall systems, steel and concrete box girder bridges, tunnels, structural analysis and design, seismic and wind design, foundation design, and retaining wall design. HDR's commitment to excellence ensures that each project meets the highest standards of safety and functionality.

NMDOT Bridge Design: I-25/Missouri Avenue, Las Cruces, NM

Roadway, transportation, and parking lot design

Led by **Paul Molina, PE,** HDR provides comprehensive design services for roadways, transportation infrastructure, and parking lots for the City, focusing on safety, efficiency, and sustainability. Our skilled team has extensive experience in enhancing community mobility and safety, developing new roadway designs, and improving existing ones to meet local and national standards. We design transportation infrastructure, including intersections and roundabouts, to improve traffic flow and safety, and create efficient, accessible parking lot layouts with ADA compliance. Our expertise extends to pedestrian and bicycle facilities, promoting alternative transportation modes and ensuring ADA compliance. We conduct traffic impact studies, integrate stormwater management solutions, and design signage and pavement markings, including ADA-compliant features for bike lanes. HDR collaborates with city

officials, utility companies, and stakeholders to ensure coordinated and integrated designs, demonstrating our commitment to improving the City's transportation infrastructure.

Bernalillo County Bridge Blvd. Phase I - Corridor Reconstruction

Site Development (drainage & grading design)

HDR provides comprehensive site development services for the City, focusing on drainage and grading design for effective water management and site optimization. Led by **Dan Pfeifer, PE,** our grading design services consider site constraints, intended use, and environmental impact to shape the land for optimal use. We design drainage systems, including storm sewers and detention/retention basins, to manage stormwater runoff, prevent flooding, and protect water quality. Our team utilizes advanced 3D software for hydrologic and hydraulic modeling, ensuring accurate drainage system design. We develop erosion and sediment control plans to minimize construction impact and comply with regulatory requirements. HDR coordinates with utility providers for integrated site development and assists in obtaining necessary permits, ensuring compliance with local, state, and federal regulations related to grading and drainage.

Southern Sandoval County Arroyo Flood Control Authority (SSCAFCA) Calle Baack Road and Drainage Improvements

Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)

Led by **Oscar Junguitud, PE**, HDR's electrical engineering team has extensive experience in a wide range of water/wastewater utility and infrastructure projects, including groundwater wells, booster pump stations, lift stations, and treatment facilities. Our engineers add value to various building types, from academic campuses to mission-critical facilities, with their expertise in electrical system design. We provide reliable designs for power distribution, standby power, and Uninterrupted Power Systems (UPS), and conduct short circuit analysis, coordination studies, and arc flash calculations using the latest software. HDR's electrical design staff also excel in sustainable design, incorporating emerging technologies like photovoltaics and LED lighting to exceed minimum energy codes.

Computer network analyses for water, wastewater, and gas systems;

HDR maintains technical proficiency in virtually all widely used computer models for water and wastewater systems, including InfoWater, H2ONet, H2OMap, WaterCAD, WaterGEMS, SewerGEMS, HYDRA, InfoSWMM, InfoWorks, MikeUrban, XP-SWMM, and many others. As a policy, we do not have a proprietary interest in any model, preferring to use the tools that our clients prefer. HDR also uses state-of-the-art GIS tools and analysis to support hydraulic modeling and master planning efforts, ensuring accurate results. Our approach allows us to provide comprehensive and unbiased modeling expertise to our clients, ensuring that we deliver the most effective solutions for their specific needs.

HDR offers a range of network analysis and 3D Visualizations capabilities. HDR provided 3D visualizations of improvements using InfraWorks for the I-25 Montgomery Interchange that were key to public outreach materials.

Supervisory Control and Data Acquisition (SCADA) design

Led by **Karthik Chandrasekaran, PE,** our team has experience in planning and designing modern SCADA and process control systems (PCS), leveraging current and emerging technology to optimize operations and promote secure data sharing and management. With a diverse background in SCADA, master planning, design,

construction, and system integration, we bring a unique perspective to all project phases, enabling proactive recognition of challenges and solutions to mitigate risks. Advances in technology and evolving business needs necessitate continuous upgrades of control systems. HDR ensures detailed planning and seamless implementation to support your operational and maintenance needs, keeping your systems up-to-date and functioning optimally.

Central Wyoming Regional Water System
SCADA System Upgrade at Water Treatment Plant

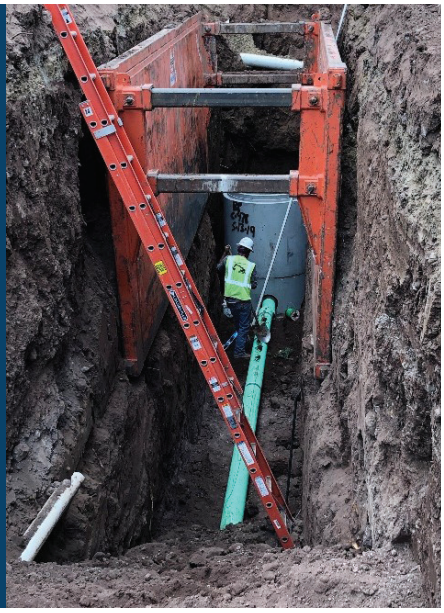
Mechanical design, gas system design, plumbing and HVAC design

HDR provides comprehensive mechanical design services for the City, focusing on gas system design, plumbing, and HVAC systems to ensure safety, efficiency, and comfort. Led by **Gabe Alvarado, PE,** our team designs safe and efficient gas distribution systems, considering compliance with safety codes and standards. We develop plumbing systems with a focus on water conservation, energy efficiency, and ease of maintenance. Our HVAC designs aim to maintain indoor air quality and thermal comfort, involving load calculations and equipment selection. We prioritize energy efficiency and sustainability in all mechanical systems to reduce energy consumption and environmental impact. Our team collaborates with architects and engineers to ensure integrated design solutions, and we ensure compliance with local, state, and federal codes, as well as industry standards for safety and performance.

Water, wastewater, and natural gas utility system design and analysis

HDR's local Albuquerque office has a proven track record in water, wastewater, and reclaimed water infrastructure projects throughout New Mexico, with project elements similar to those in this on-call contract, such as water storage, conveyance, and pumping. Our recent experience in utilities and infrastructure projects provides a unique perspective for this contract. Led by **Wade Chacon, PE,** HDR boasts unmatched expertise in water treatment plant (WTP) engineering, covering paper studies, bench-scale research, pilot testing programs, facility evaluation, and final design. Our engineers have successfully designed greenfield plants and completed rehabilitation or upgrades of existing WTP facilities. With numerous water treatment projects completed in New Mexico and nationwide, HDR is well-equipped to deliver high-quality solutions for water infrastructure challenges.

HDR, in coordination with The Village of Angel Fire, provided, drainage design and construction plans for over three miles of roadway in challenging terrain. HDR's team of experts was able to develop cross culverts, storm drain network and erosion projection elements that met the challenge of conveying storm water without adversely impacting local residents or businesses.



Traffic Impact Studies and Transportation Modeling Studies

Led by **Sanjay Paul, PE, PTOE,** HDR provides comprehensive services for Traffic Impact Studies and Transportation Modeling Studies for the City, focusing on assessing the impacts of proposed developments on the transportation network and modeling future traffic scenarios. Our services include conducting Traffic Impact Studies to evaluate the effects of proposed developments, analyzing existing traffic conditions, forecasting future traffic volumes, and assessing additional traffic impacts. We also develop Transportation Modeling Studies to simulate current and future traffic conditions, considering changes in land use, transportation infrastructure, and traffic management strategies. Our team collects and analyzes traffic data for study calibration, assesses the level of service at intersections and roadways to identify potential congestion issues, and evaluates the effectiveness of proposed improvements. HDR

identifies and recommends mitigation measures to address traffic impacts and prepares comprehensive reports documenting the methodology, findings, and recommendations of the studies.

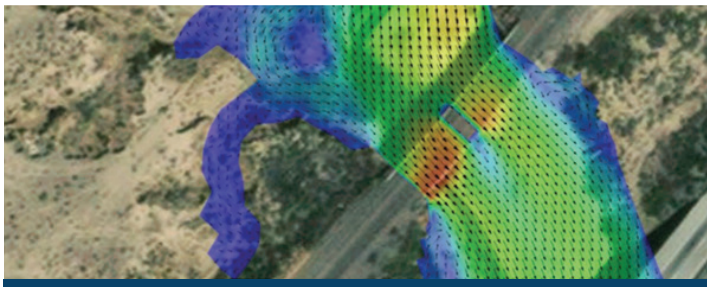
Photometrics/street lighting design

HDR provides comprehensive photometric and street lighting design services for the City, focusing on enhancing visibility, safety, and aesthetics in public spaces while ensuring energy efficiency and environmental sustainability. Led by **Sanjay Paul, PE, PTOE,** our services include developing lighting designs for streets, parks, and public spaces, considering factors such as illumination levels, uniformity, glare control, and light trespass. We conduct photometric analysis to model lighting performance, including light distribution patterns, intensity, and coverage areas. HDR recommends energy-efficient lighting fixtures and controls, such as LED technology and adaptive lighting systems, to reduce energy consumption and costs. Our designs comply with local, state, and national lighting standards and guidelines, including those related to public safety, dark sky initiatives, and environmental impact. Additionally, we coordinate with landscape architects and urban planners to integrate lighting into the overall street scape and landscape design, enhancing aesthetic appeal and functionality.

Bernalillo County Tower Road, Albuquerque NM, ADA compliant pocket-park design with landscaping and decorative lighting.

Drainage Studies, including FEMA Flood Studies

Led by **Dan Pfeifer, PE,** HDR has extensive experience in comprehensive drainage studies, focusing on assessing and mitigating flood risks, improving stormwater management, and ensuring compliance with FEMA floodplain regulations. Our services include conducting hydrologic analysis to determine the volume and rate of surface runoff, developing hydraulic models to assess the drainage system's capacity, and utilizing advanced GIS and modeling tools to create accurate floodplain maps. We conduct FEMA flood studies to support the development or revision of Flood Insurance Rate Maps (FIRMs) and design stormwater management facilities to reduce peak flows, improve water quality, and enhance resilience to flooding. HDR recommends flood mitigation strategies to protect property and infrastructure and ensures that all studies and designs comply with local, state, and federal regulations, including the National Flood Insurance Program (NFIP) and local stormwater management ordinances.



Hydraulic assessment of the velocity fields for bridge alternatives for the Puerco River bridges.

Storm Drainage

HDR is committed to providing comprehensive storm drainage design services for the City, focusing on effective stormwater management to prevent flooding, protect water quality, and enhance community resilience. Led by **Dan Pfeifer, PE,** our services include designing storm drainage systems, such as inlets, pipes, channels, and detention/retention facilities, to efficiently convey stormwater runoff and reduce flood risks. We perform hydrologic and hydraulic analysis using advanced modeling tools and techniques and incorporate best management practices (BMPs) and green infrastructure solutions, such as bioswales, rain gardens, and permeable pavements, to improve stormwater quality. We design erosion and sediment control measures to prevent soil erosion and protect waterways. Our team ensures compliance with local, state, and federal stormwater regulations, including NPDES permits and local stormwater management ordinances. Additionally, we assess and mitigate the impact of storm drainage systems on floodplains, ensuring alignment with FEMA guidelines and community floodplain management plans.

Solid waste studies, landfill system design and analysis

At HDR, we recognize that waste management is not a one-size-fits-all industry and that textbook solutions don't always work. We listen first and partner with you to tailor our solutions and project teams to your specific needs. Led by **Andrea Ramirez, PE,** our team will work with you to manage waste as a resource, taking a fresh approach to achieve your goals, whether it's developing a zero waste strategy or implementing robust resource recovery processes. Our Integrated Waste Management Services include planning, waste transfer and processing facilities, energy from waste and conversion technologies, organics management, landfill services, permitting, environmental remediation, strategic consulting, and public involvement. With HDR, you can be confident that your waste management goals will be met with innovative and sustainable solutions.

City of Tucson, AZ - Landfill

Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City

HDR is well-versed in the environmental requirements, procedures, and documentation necessary for the City's federally funded projects, ensuring compliance with NEPA regulations. Our expertise extends to permitting under Section 404 and 401 of the Clean Water Act, Endangered Species Act compliance, cultural resources documentation, and Section 4(f) of the Department of Transportation Act. **Audrey Unger, PMP,** with over 20 years of experience in transportation NEPA, will lead HDR's Environmental Investigations and Documentation. Currently responsible for quality control of all environmental documents on HDR's New Mexico projects, Audrey has a strong understanding of the City's requirements, ensuring that our environmental services are executed with precision and expertise.

The HDR Team also includes **Acme Environmental Inc.** to provide staff for the completion of environmental surveys and assessments related to indoor air quality, asbestos, mold and other hazardous materials.

Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City

HDR will work with our sub-consultant, **Terracon Consultants, Inc. (Terracon),** to address the City's geotechnical assessment needs. Terracon's geotechnical engineers specialize in developing comprehensive assessment and evaluation programs that provide dependable design and construction recommendations.

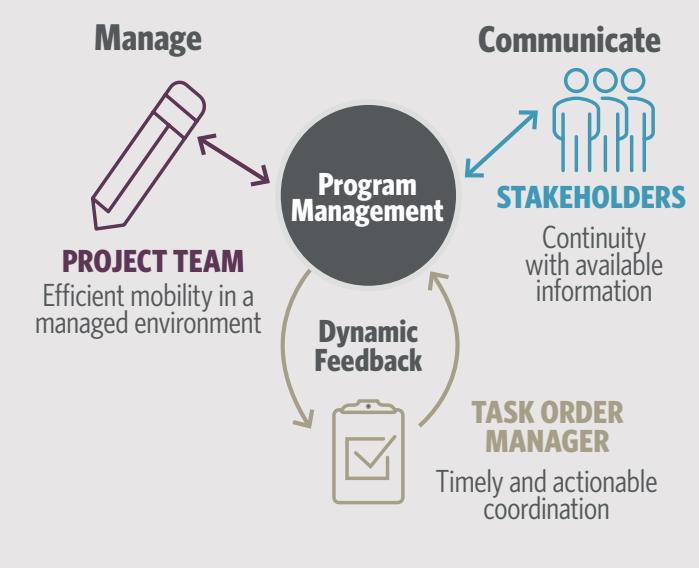
HDR provides sound, innovative, and cost-effective groundwater supply solutions to a diverse array of water supply challenges across the nation for municipal and industrial clients. Our team members can perform comprehensive analyses to understand the subsurface environment and groundwater — surface water interaction as necessary for environmental protection.

Expert witness in a judicial and/or quasi-judicial setting

HDR offers expert witness services in judicial and quasi-judicial settings, providing technical expertise and objective analysis to support legal proceedings related to engineering and construction disputes. Our team of experienced professionals, including engineers, architects, and construction experts, is well-equipped to provide credible testimony, technical evaluations, and analysis in various legal contexts. HDR's expert witnesses are committed to delivering clear, concise, and well-supported opinions to aid in the resolution of complex legal matters.

Project Management

HDR's Project Management Plan (PMP) integrates all the components of a successful work plan to achieve consistency of deliverables that meet your schedule and budget. Led by **Paul Molina, PE,** has the experience, tools, and techniques to not only monitor and control the work, but also clearly communicate status and progress to our clients.



Construction Inspection

Led by **Chris Sanchez,** HDR will provide comprehensive construction inspection services for the City, verifying that projects are built in accordance with design specifications, quality standards, and regulatory requirements. Our services include quality assurance and control, regular site inspections, testing and verification of materials, documentation and reporting, issue resolution, change order management, safety oversight, and final inspection and punch list development. With extensive experience in construction inspection, our team of certified inspectors and construction professionals is skilled in ensuring that projects are completed in compliance with all specifications and standards.

Additional Services:

Standard Drawings. This on-call contract may be utilized to prepare and update the City's standard drawings. These types of drawings standardize fabrication, installation, and construction methods for specific items of work, which also complement the contract documents and standard specifications. Our extensive knowledge allows us to perform modifications when necessary to bring the drawings up to current standards. HDR's thorough understanding enables us to provide services to develop standard drawings for every situation.

Develop and Review Specifications. HDR has a proven history of developing construction specifications for many clients. These construction specifications range from fairly simplistic to extremely advanced, such as using the latest ITS technology, or construction practices, including new paving techniques or construction equipment. HDR has the breadth and depth of expertise to assist the City with specifications that cover the disciplines of water, wastewater, natural gas, solid waste, highway, bridge, traffic, drainage, and any other general engineering services.

Public Involvement/Strategic Communications. We are prepared to provide professional community relations and public involvement services including preparing and implementing outreach and engagement strategies and plans, and developing publications (e.g., fact sheets and newsletters), websites, videos, graphics and presentation materials, online surveys or other interactive web-based tools, meeting notifications, presentations, social media, social media monitoring, and outreach documentation and summary reports.

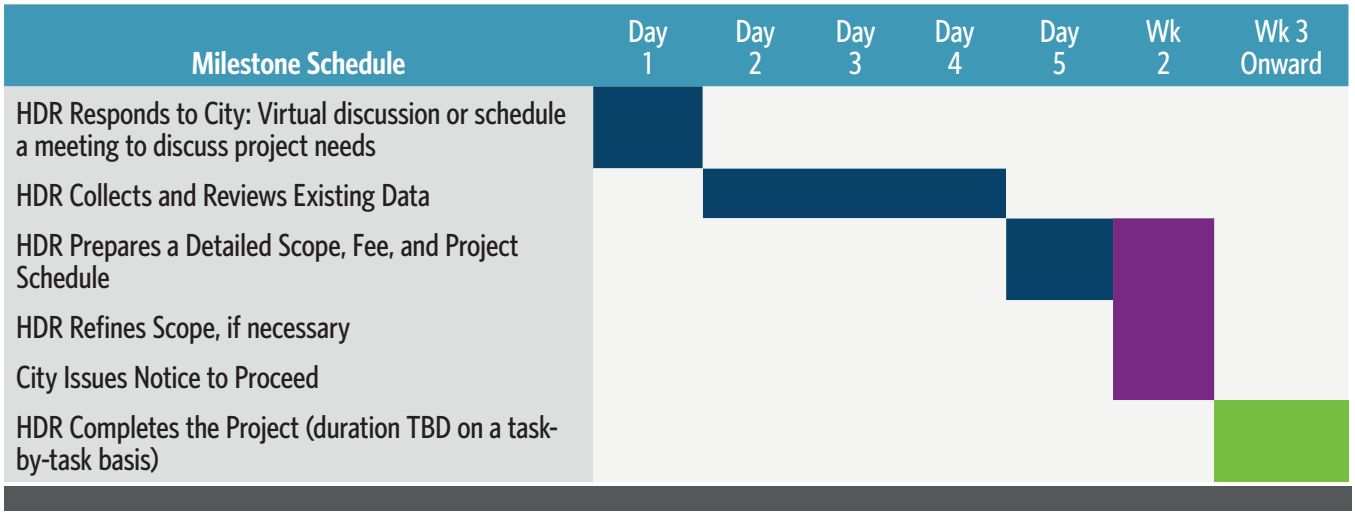
Typical Project Schedule/Timeline

Internally, our project managers and design teams utilize two valuable tools to meet project schedules:

Work Plan. A program used to schedule staff, as well as QA/QC reviews (as discussed on page 2) and client deliverables. This tool helps project managers identify which staff are available far in advance, so that staff can be adjusted as needed.

Engaged Management Team. Our most powerful project management tool is our vast pool of management staff available to assist project teams in identifying critical paths for successfully meeting project schedules. Technical leaders from across the country work with project managers to make sure they have adequate resources and reviewers to supply you with quality deliverables on time. HDR develops solutions that support the growing needs of the City and the market you serve.

When contacted by the City, our mission is to act immediately and mobilize quickly to produce products that efficiently, effectively, and appropriately meet the needs of the project. We will provide a detailed schedule for each task order that is assigned. The sample bar chart below illustrates our response time and scope of fee development.

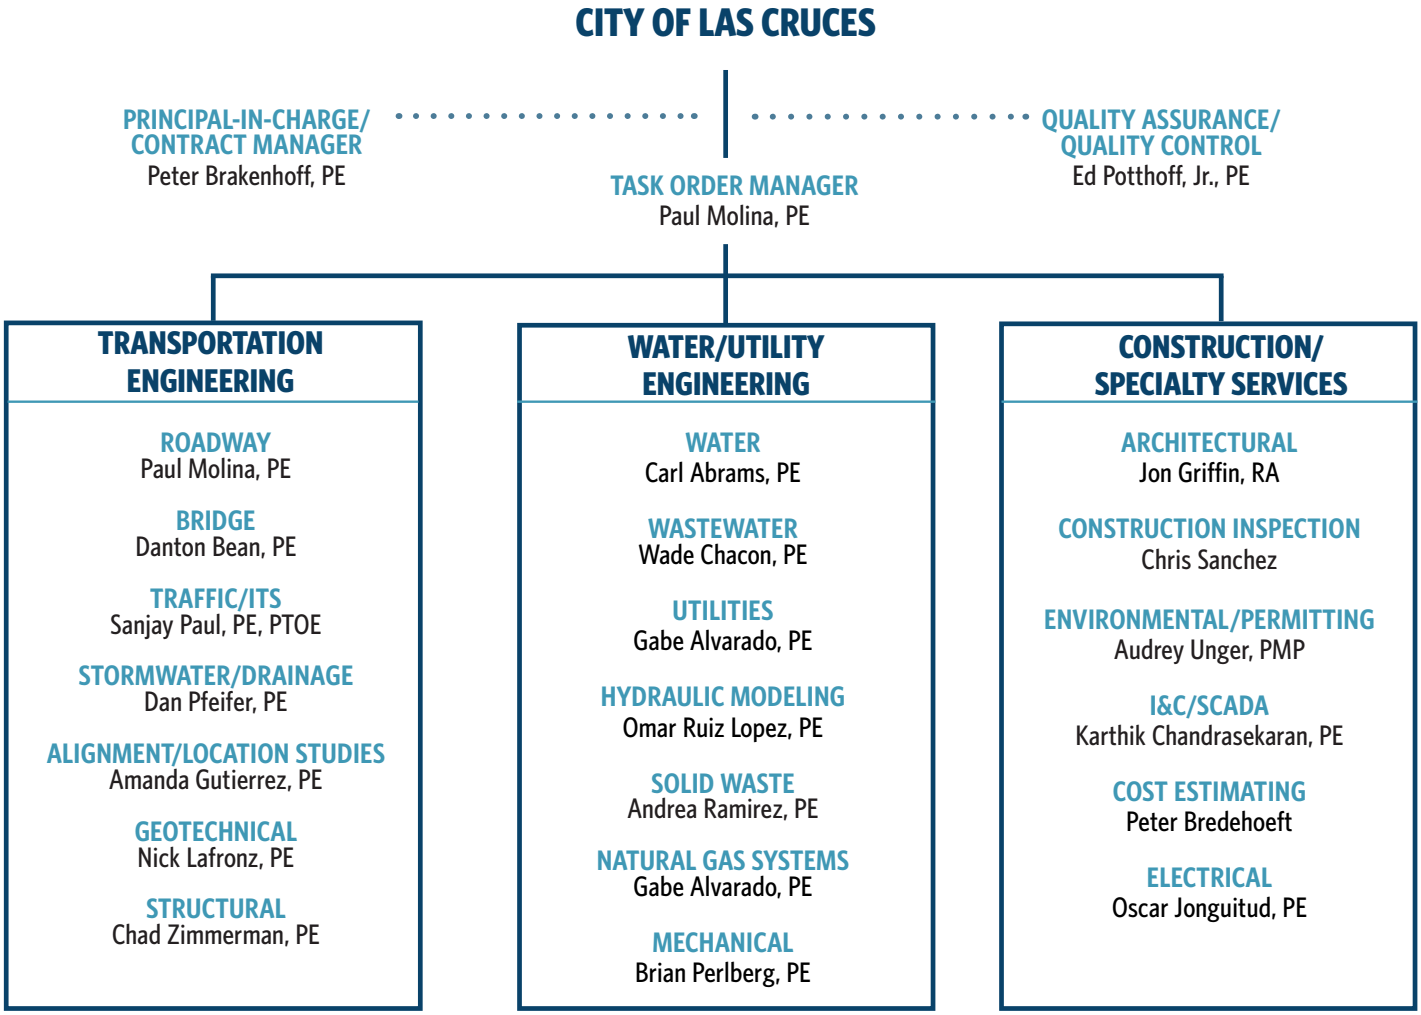


Evaluation Criteria No. 2 - Qualifications/Competence

We believe that making a difference begins with selecting the right people with proven expertise, who have a shared purpose and the enthusiasm to realize your vision. We offer an integrated team that consists of highly qualified professionals. HDR's proposed **Project Principal, Peter Brakenhoff, PE**, will lead the project team from our Albuquerque office. Peter has successfully served as Principal-in-Charge on numerous on-call contracts over the last 17 years. Our **Task Order Manager, Paul Molina, PE** possesses effective project management and communication skills, and his hands-on design and construction experience will lead the HDR team in expediting task orders and producing accurate and quality deliverables.

HDR team members have been specifically selected to provide the City with a qualified and capable team that meets the specific challenges identified in the RFP. Team members and assigned roles are shown in the organizational chart below. The following pages include short bios and the percent of time our key staff will be assigned to each project.

Organizational Chart



Peter Brakenhoff, PE, NM No. 14225
Project Principal/Contract Manager - 5%
Peter's 32 years of experience encompasses highway engineering corridor and alignment studies and design of roadways, drainage, utilities and construction traffic control. He has formerly served on the ACEC-NM Board of Directors and is a member of the ACEC-NM/NMDOT Liaison Committee. As the Principal-in-Charge on this contract, Peter will consistently coordinate with the City's management to meet your project needs and delivery schedule.

Paul Molina, PE, NM No. 21481
Task Order Manager/Roadway - 15%
Paul has 21 years of experience in transportation design including the geometric design of transportation corridors, roadway design and modeling, construction traffic control, signing and striping, pedestrian/bicycle facility design, and the design of Americans with Disabilities Act (ADA)/ Public Right of Way Accessibility Guidelines (PROWAG) compliant facilities. Paul will be responsible for all work performed while leading the team from our Albuquerque office.

Ed Potthoff, PE, NM No. 17633
Quality Assurance/Quality Control - 5%
Ed has more than 22 years of experience in the field of civil and highway engineering. His main experience includes design and project management of highway and interchange/intersection projects with more recent experience including specific ADA improvements, roadway and pedestrian lighting improvements, and intersection safety improvement projects.

Danton Bean, PE, NM No. 15551
Bridges - 20%
Danton has more than 26 years of experience in bridge and highway engineering. He specializes in projects through the study and final design phases, and has worked on all aspects of conceptual, preliminary, and detailed design, as well as construction phase services. His project-related responsibilities include management, supervision, directing project design and deliverables, quality assurance and quality control, project and agency coordination, and public and client presentations.

Sanjay Paul, PE, PTOE NM No. 27727
Traffic/ITS - 20%
Sanjay has 16 years of experience in traffic engineering, planning, design and operations, transportation modeling and planning, roadway safety, lighting, and intelligent transportation systems (ITS) in both private and public sector. He has served as Project Manager/Lead Engineer and task leader on numerous engineering on-call contracts. His leadership, project management skills, and traffic engineering design experience, provides added value and quality to your project.

Dan Pfeifer, PE, NM No.24053
Stormwater/Drainage - 20%
Dan has 15 years of experience in bridge hydraulics, scour analysis, stream restoration, floodplain modeling, and on-site/off-site civil design. He has proficient knowledge of New Mexico design standards and provides direction and leadership on complex hydrologic and hydraulic assessments throughout the state.

Omar Ruiz Lopez, PE, NM No. 26658
Hydraulic Modeling - 35%
Omar has over 13 years of experience consisting of drainage disciplines including hydrologic analysis, 1-D/2-D hydraulic modeling, scour mitigation design, field surveying, and construction observation. Previous projects experience includes transportation drainage design and outlet protection design. He has become proficient in the following computer modeling programs to analyze hydrologic conditions and hydraulic structures; SRH2-D, AutoCAD, Civil3D, StormCAD, HY8, ArcGIS Pro/ArcGISMAP and other programs that help with modeling and design.

Amanda Gutierrez, PE, NM No. 20915
Alignment/Location Studies - 30%
Amanda has 17 years of experience in the design and construction of transportation infrastructure, including roadway and construction traffic control design. She is experienced in planning and design of roadway facilities for both rural and urban areas that include retrofitting existing facilities, new construction, pedestrian and bicycle facility planning and design, permanent signing and striping, alignment and corridor studies, cost estimating, and construction drawings/specifications for transportation projects.

Carl Abrams, PE, NM No.13167
Water - 25%
Carl has 34 years of experience in the design and construction oversight of solid waste facilities, water and wastewater treatment and conveyance systems, assessment and remediation of water and soils, on-site septic systems, and site grading and development. He also has extensive experience with the preparation of contract documents, including plans, specifications, bid documents, and record drawings.

Wade Chacon, PE, NM No.17857
Wastewater - 25%
Wade has 26 years of experience completing evaluation and design of water and wastewater systems including: wastewater treatment facilities, gravity, low pressure and vacuum sewer collection systems, sanitary sewer lift stations, odor control stations, and water distribution, transmission and storage tanks. His design experience includes project management, preliminary engineering reports, mechanical process design, site civil design, project scheduling and cost estimating, and construction administration services.

Gabe Alvarado, PE, NM No. 17297
Utilities/Natural Gas Systems - 25%
Gabe has over 25 years of experience in the planning, analysis, and design of water distribution systems and wastewater collection systems including projects throughout New Mexico. Previous projects have included the completion of hydraulic modeling, technical reports, preliminary design reports, plan and profile drawings, mechanical drawings, specifications and contract documents, cost estimating, and project scheduling.

Andrea Ramirez, PE, ENV SP, AZ No. 72222
Solid Waste - 15%
Andrea has 17 years of experience supporting clients on a variety of planning, design, and compliance projects for both waste disposal and waste diversion programs. She has performed feasibility studies, site evaluations, conceptual site designs, permitting, and master planning for an assortment of waste management and diversion facilities, including composting facilities, transfer stations, resource recovery parks, anaerobic digesters and other alternative energy facilities.

Nick LaFronz, PE, NM No. 16956
Geotechnical - 20%
Nick has 40 years of experience as a registered professional engineer in planning, coordinating, and implementing major geotechnical engineering projects. He has extensive experience with geotechnical characterization, analysis and design of transportation projects including shallow and deep foundation systems for major river crossings, TI bridges and grade separations, roadway cut and fill slopes in soil and rock, earth retention systems, embankments and pavement sections, rock excavation characterization, and load tests of deep foundations.

Chad Zimmerman, PE, NM No. 23995
Structural - 20%
Chad has 19 years of experience that includes industrial type projects such as mechanical and equipment buildings, warehouses and water/wastewater plants. He has specific design experience in retaining wall design, construction administration, inspecting placement of reinforcement for concrete structures, concrete building design for above and below-grade buildings, building design in high wind zone regions, building design in moderate seismic zones, steel and concrete moment frames and steel concentrically braced frames for new buildings, and finite element analysis modeling for concrete foundations and walls.

Brian Perlberg, PE, NM No. 23176
Mechanical - 15%
Brian is an accomplished project manager and lead mechanical engineer for projects ranging from $500,000 to $270 million in construction budget. He has 22 years of experience in a wide variety of building types including education, healthcare, government, higher education, mission critical, laboratory, correctional and commercial. Experienced in working under a variety of project delivery methods including accelerated delivery, design-build and multiple-package projects.

Karthik Chandrasekaran, PE, AZ No. 54857
I&C/SCADA - 15%
Karthik has 15 years of experience as an I&C engineer. His experience includes I&C system design, PLC/human machine interface (HMI) programming, startup, and commissioning for a variety of pump stations, de-watering systems, tailings delivery, crush, and convey systems. His responsibilities include development of P&IDs, loop diagrams, control loop description, specification of instrumentation, design of Control Panel, and Systems Integration. He has acquired a vital combination of hands-on field experience and detail oriented technical knowledge to deliver a robust control system efficiently.

Jon Griffin, RA, AZ No. 36304
Architect - 20%
Jon has more than 32 years of experience providing services for project planning, programming, design, team coordination, consultant coordination, document production, specifications writing, and construction administration, and has extensive experience building client relationships and conducting presentations to government agencies. Experience covers the full spectrum of project tasks from design develop through construction administration.

Audrey Unger, PMP, No. 1322755
Environmental/Permitting - 10%
Audrey has over 20 years of experience on National Environmental Policy Act (NEPA) projects throughout the Southwest. Audrey has prepared well over 100 categorical exclusions, several environmental assessments (EA), including EAs for DOTs on tribal lands, and a few environmental impact statements. In addition to NEPA, Audrey understands other federal, state, and local environmental policies, procedures, and regulations including Section 4(f) of the USDOT Act, Endangered Species Act, Clean Water Act; and Section 106 of the National Historic Preservation Act Consensus.

Chris Sanchez
Construction Inspection - 15%
Chris has 18 years in construction inspection, field office management, and construction surveying for roadway, water distribution, drainage, structures, and environmental projects. He performs and verifies field tests such as density testing and concrete testing, performs various lab tests and materials sampling, verifies traffic control placement, oversees placement and testing of intersection signalization (including all electrical), inspects seeding and fence placement.

Oscar Jonguitud, PE, NM No. 25469
Electrical - 20%
Oscar has 12 years of experience in design and construction in the water, wastewater and power generation industry. His experience includes electrical design and construction of water and wastewater treatment facilities, solar farms, pump stations and water distribution networks. This includes medium and low voltage power distribution system design.

Peter Bredehoeft, CEP, AACE No. 4
Cost Estimating - 5%
Pete has completed more than 3,300 cost estimates on all levels, including program management, conceptual bonding type estimates, order of magnitude project estimates, design development estimates, construction document estimates, final design estimates, operations/maintenance estimates and change order-type definitive level estimates. Pete is a specialist in estimating location or area adjustment factors and in escalation development and commodity trends. He has extensive program management experience (5 to 15 major programs) on large capital improvement programs.

PRINCIPAL OFFICER/OFFICE LOCATION

Depending on the specific task, we anticipate that the majority of the work performed under this contract will be conducted in the State of NM by HDR, a business licensed and operating in Albuquerque, NM, with support of professional technical expertise as needed from other HDR offices including our sub-consultants. Our Principal Officer is **Peter Brakenhoff, PE NM No. 14225** will be responsible for administration of the contract. His contact information and office location are listed below:

2155 Louisiana Boulevard NE, Suite 3000
Albuquerque, NM 87110
505.830.5400

SUB-CONSULTANTS

We have augmented our team with key sub-consultants based on their technical skills, our prior experience working together as a team, and our history of successfully completing projects.

ACME Environmental

Indoor Air Quality/Asbestos/Mold
3816 Carlisle NE Albuquerque, NM 87107
505.433.4461

ACME Environmental, Inc. provides comprehensive environmental, safety and health consulting services. These services include industrial hygiene and safety consultation, asbestos, lead, and mold investigation, project design and contractor oversight. All of ACME's consulting activities are performed under the supervision of a Qualified Industrial Hygienist.

COBB, FENDLEY & ASSOCIATES (COBBFENDLEY)

Surveying & Mapping, Subsurface Utilities Engineering (SUE)
3820 Academy Pkwy. North NE Albuquerque, NM 87109 505.508.0786

CobbFendley will be responsible for the survey, mapping, ROW, and property ownership research on this project. They are a multi-disciplined firm of over 600 professionals established in 1980 and located in Albuquerque, NM. In their 43-year history, the firm has successfully completed thousands of surveys for public and private sector clients, including boundary, topographic, engineering design, and utility surveys.

TERRACON CONSULTANTS, INC. (TERRACON)

Geotechnical Services
6805 Academy Pkwy West NE, Albuquerque, NM 87109 505.797.4287

Terracon, an employee-owned company, provides geotechnical, environmental, facilities engineering, and construction materials testing services to public and private entities throughout the U.S. They place a strong emphasis on the development and application of new geotechnical technologies. Terracon has completed geotechnical work for HDR projects throughout the Southwest and has established an effective working relationship.

Evaluation Criteria No. 3 - Performance of the Firm

NMDOT/Bernalillo County, Bridge Blvd. Reconstruction Project Phases I & II

Albuquerque, New Mexico

REFERENCE:
Jason Clark, PE, Bernalillo County
Engineering Program Manager
Bernalillo County, NM
505.362.2948
ljpclark@bercon.gov

The HDR team provided planning, environmental, coordination, and engineering services for the reconstruction of 2.1 miles of Bridge Boulevard in Albuquerque. The urban corridor spans Tower Road and Bridge Boulevard from Coors Boulevard to Lura Place (Phase I, 1.6 miles) and Young Road to the river bridge (Phase II, 0.5 miles). The improvements include full depth asphalt reconstruction, ADA pedestrian facilities, buffered bicycle lanes, drainage improvements, updated adaptive signal equipment and ITS, updated LED pedestrian decorative lighting, and improved landscaping including median plantings and a pocket park at the intersection of Bridge and Old Coors. Construction for Phase I was recently completed late 2022. Phase II is currently under construction.

Various segments of the corridor are owned by different agencies and contain various stakeholders and users. Coordination amongst the various entities was key to successfully delivering the projects on schedule and within budget. Both projects included federal funding and underwent NMDOT Certification, which was also conducted by HDR.

City of Rio Rancho, Southern Blvd. Phase II Reconstruction

Rio Rancho, New Mexico

REFERENCE:
Arnell Freidt, Project Manager
City of Rio Rancho, NM
505.896.8242
afriedt@rrnm.gov

HDR is providing final design and communications services for the Southern Boulevard Phase II Reconstruction project. As part of the transportation analysis, HDR collected traffic data, performed an intersection level of service analysis, and developed recommendations for turn lanes. Later, the team assisted with design services including sidewalks, roadway, traffic signals, crosswalks, intelligent transportation system (ITS), and communications as well as traffic control plans and interim condition signal and ITS designs.

Additionally, at each major milestone on the project, HDR developed and implemented public engagement and outreach opportunities. Communication tasks included developing fact sheets, fliers, email blasts, presentations, technical graphics, and meeting summaries.

In addition, HDR helped plan and facilitate two public virtual meetings to discuss improvements and potential construction impacts.

NMDOT, US 60/84 Final Design Phase II

Clovis, New Mexico

REFERENCE:
Arthur J. Romero, PE, Project Development Engineer
NMDOT, District 4
505.617.6887
arthurj.romero@dot.nm.gov

The HDR team is the lead consultant providing planning, environmental, and engineering services for the reconstruction of a 3-mile stretch of US60/84 in Clovis, New Mexico from Wheaton Street to Prince Street. The expected improvements include pedestrian facilities (sidewalk and curb ramps), drainage system, roadway surfacing, and updated signal and lighting equipment. The current drainage system has been identified as inadequate per the current NMDOT design standards and requires improvements to mitigate against adverse conditions from roadway modifications. Drainage services provided include site reconnaissance, sediment evaluation, on-site and off-site hydrologic analysis, on-site hydraulics for determination of existing system capacities, development of concept alternatives for stormwater routing, detention siting, and outfall management.

This project is located in a FEMA Special Flood Hazard Area and is subject to both state and federal criteria for mitigation of future impacts. This project is currently in the final design construction documents.

PROJECT ASSIGNMENT AGREEMENT

23-24-051 GENERAL ENGINEERING SERVICES

PROJECT NAME

Pursuant to terms and conditions of City of Las Cruces (CITY) Contract No. 23-24-051 dated June 1, 2024 between the CITY and HDR Engineering, Inc. (ENGINEER), as amended and incorporated herein by reference, the City and Contractor hereby agree on this _____ day of _____, 20___, as follows:

1. In a satisfactory and proper manner, the ENGINEER shall perform SERVICES as proposed in response to the CITY's RFP No. 23-24-051 and ENGINEER's proposal as set forth in ATTACHMENT A attached hereto.

2. The estimated completion date is number days after a Notice to Proceed is issued by the CITY to the ENGINEER.

3. In consideration for the satisfactory completion of the work agreed to herein, compensation shall be made in the amount of $dollars.cents, plus NMGRT. Invoices issued by the ENGINEER shall be made monthly / upon completion of project with payment by the CITY being made within 30 days upon receipt of undisputed invoice.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Johnson, Mirmiran, & Thompson, Inc., of 40 Wight Ave, Hunt Valley, MD, 21030, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Johnson, Mirmiran, & Thompson, Inc. 40 Wight Ave Hunt Valley, MD 21030 ATTENTION: Melchor Herrera

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

General Engineering Services

City of Las Cruces

Technical Proposal

RFP NO.: 23-24-051
February 27, 2024 / 4:00 p.m.

February 27, 2024

City of Las Cruces
ATTN: Purchasing Department / Bid Clerk
700 N. Main Street, Suite 3100
Las Cruces, NM 88001

RE: 23-24-051 General Engineering Services

Dear Selection Committee,

The City of Las Cruces (City) is tasked with the challenge of providing street management, traffic management, utility, and facility services to taxpayers, while meeting city growth and residents' quality of life. Meeting the challenge of providing these services in a timely, cost-effective, and customer-focused manner is integral to making Las Cruces the ultimate place to live.

Johnson, Mirmiran, & Thomson, Inc. (JMT) helps cities across the U.S. find solutions to complex projects like yours. JMT, a 100% employee-owned company, is a full-service, multi-discipline engineering firm, providing services for more than 50 years. **Our firm is currently ranked #59 on the Engineering News-Record (ENR) list of the Top 500 Design Firms.** Our services include engineering, architectural, construction management, project management, environmental, GIS, HVAC, surveying, and technology services. **We bring fresh engineering innovations to cities like yours!**

Our local engineers are known to the City. JMT's team will be led by our Principal Engineer and Project Manager, Atzuko Reveles, PE, from our El Paso office, our acquired firm ECM International, Inc. Atzuko's past engineering experience with the City includes work for the Public Works and Utilities Department. He will be supported by an "outside the box thinking" engineering team, who bring in-depth knowledge and a multitude of experience gained from similar contracts across the country. The advantage of selecting JMT includes:

Technical Expertise. Our team has a proven record of delivering high-quality on-call services for clients locally and across the county. Our experts cover the entire spectrum of engineering services including structural, roadway, transportation, site development, electrical, SCADA, MEP, water/wastewater, environmental, and construction inspection.

Las Cruces Experience. We have gained imense expernce workign with City for the past six years. We value the relathionship we have built with the City and City Departments during the 2018 General Obligations Bond Projects as the Program Manager and Owner's Advisor. Our team provided key services that ensured the projects were completed with a high quality of success. The success of this project was made possible by the collaborative efforts of City leadership and the JMT team.

Availability and Responsiveness. Our local office comprises a team of 55 professionals, including engineers, architects, construction managers, schedulers, estimators, and designers, and includes New Mexico registered professionals. This robust team enables us to handle projects locally and respond promptly to your needs. Moreover, we can draw on additional staff from our other offices to support your projects as necessary.

Thank you for the opportunity to present our qualifications. We are committed to providing the City with innovative professional services that align well with your mission and vision. We are looking forward to assisting you with your project needs. If you have any questions or need further information, please do not hesitate to contact me at areveles@jmt.com or 915-283-6771.

Sincerely,

Atzuko Reveles, PE
Principal Engineer

Melchor Herrera, PE, PMP, LEED AP
Contract Manager

Firm Introduction

Established in 1971, Johnson, Mirmiran and Thompson, Inc. (JMT) is a multi-disciplined consulting firm providing engineering and related services to public and private clients, resulting in the establishment of a reputation as a first-class engineering firm providing user-friendly and innovative services.

As a 100% employee-owned firm, we take ownership and high responsibility of our work in every project engagement we undertake. That motivation ensures that you get our full commitment, every time. JMT has expertise in planning, design, and construction phase services for all modes of civil engineering design projects working with federal, state, and local agencies on a wide range and scale. As an ISO 9001:2015 certified company for quality management, our work consistently yields positive impacts and exceeds deliverable expectations.

We Know the City of Las Cruces!

The office providing primary general engineering services under this contract will be our **El Paso Office** located at 404 Executive Center, Blvd. El Paso, TX 79902. Our local staff of more than 55 professionals includes New Mexico registered engineers, architects, designers, construction managers, schedulers, program managers, and estimators who will serve as primary staff for this contract. Our team members have experience with the City of Las Cruces on projects such as the 2018 Bond Program and the ongoing RoadRunner Transit and Operations Center. Our team's proximity will allow us to expedite services, thereby delivering time-sensitive solutions with reduced cost and a **superior knowledge of the City's standards, specifications, and permitting issues.**

Our local team will be led by our Principal Engineer and Project Manager Atzuko Reveles, PE. He has over 18 years of experience in municipal and utility projects in our area. He has prior experience with the City of Las Cruces. For Public Works, Atzuko worked on the multi-year Las Cruces 2018 General Obligations Projects and the Roadrunner Parkway bridge design. For the Utility Department, he worked on design projects, such as the South Jornada Water Improvements Project, Phases I and II. He completed feasibility studies for Automatic Meter Readers, Security Vulnerability Assessment for water infrastructure, and updates to the Operations and Maintenance Manuals.

JMT is well-positioned and experienced to support the City in any professional and/or specific task request specified in this RFQ. Our Team structure magnifies our abilities to effectively manage and deliver concurrent requests. We are prepared to handle multiple task/project requests simultaneously under this contract. **We have highlighted our technical lead personnel throughout our technical approach for each individual scope of work category.**

New Mexico Professionals:
Melchor Herrera, Professional Engineer Licenses #18290
Atzuko Reveles, Professional Engineer Licenses #133677

As employee-owners, each of our staff has a vested interest in the success of projects, providing exceptional service to our clients. So, when you're successful, we're successful. Our emphasis on quality stems from the individual dedication that drives each employee's commitment that we make when we accept any assignment, large or small.

Technical Approach & Qualifications

JMT brings a team that has a history of success managing on-call contracts and the multiple, concurrent, and diverse assignments associated with them. JMT has technical expertise in the different services required by the contract, making us fully capable of handling assignments including all the required disciplines needed for this contract.

Our strong performance for on-call contracts has been the result of sound project management, basic budget and scope principles, and application of a structured quality management culture. JMT's Task Managers understand that they are responsible for the timeliness and quality of the final product produced under their leadership. In most cases, the Task Manager will stamp his/her professional seal onto the report or the contract documents.

Project Understanding

JMT understands that the primary focus of this contract is to provide a variety of general engineering services to the City of Las Cruces. We have extensive experience with providing engineering services for roadway, structural, mechanical, electrical, environmental, geotechnical, water, stormwater, wastewater, drainage, and natural gas along with project management and construction inspection across the nation. **This broad experience of working in different regions allows us to bring the most innovative solutions to the table while also considering the uniqueness and common design practices of Las Cruces.**

JMT understands the breadth and comprehensive nature of this on-call contract as well as the potential challenges this type of contract can present to the City. Because of our extensive experience with many on-calls and comprehensive engineering services contracts, we know where potential difficulties exist and have learned how to eliminate or mitigate those difficulties through sound project management techniques, utilization of highly skilled professionals, effective communications, thorough documentation, and adherence to schedules and budgets.

Most projects today have a variety of challenging aspects and require numerous disciplines to participate and interact regularly to have a successful project. Having experienced overcoming these challenges and having the service disciplines in-house enables JMT to effectively manage all aspects of the project.

We also have earned a reputation as a first-class consulting firm providing innovative, user-friendly, and cost effective solutions to assist agencies in meeting their regulatory commitments and improving service to customers. JMT offers the experience and capacity to successfully complete both large and small task orders.

ORGANIZATIONAL CHART

Delivering work under an on-call contract can be challenging, our experience and team organization will afford the City a level of confidence in its on-call provider. JMT has a long track record of working with other municipal clients on these exact types of projects.

WATER AND WASTEWATER

The JMT Team's familiarity with designs of water and wastewater systems across a variety of jurisdictions and municipalities provides us with a wealth of knowledge upon which we can draw to solve problems as they present themselves. **JMT has provided water and wastewater engineering services for over 25 years.** We help cities and utility owners solve their most challenging projects. Our experience includes feasibility studies, design, and condition assessment. JMT employs both traditional and cutting-edge techniques and materials depending on each project's particular needs and constraints. We have the capacity to entirely engineer your most complex design needs. The following provides a list of services relative to water and wastewater:

Services

- Steel Tank Corrosion
- Concrete Tank Design
- Groundwater Wells
- Water/Wastewater Master Plans
- Hydraulic Models
- Hydraulic Studies/ Engineering
- Feasibility/Design/ Construction for WTP and WWTP
- Water and Sewer Lines Design (gravity and force mains)
- Water/Sewer Line Rehabilitation
- Odor Control
- Plans and Specifications
- Cost Estimates
- Feasibility Studies
- Coordination and Permitting
- Geographic Information Systems
- Studies and Reports
- Civil Engineering Solutions
- Pump/Lift Station Design
- SUE

The **Louisiana Street Water Line Replacement in McKinney, Texas** included the replacement of 1,200 LF of 6" and 12" waterline and appurtenances. Accommodations were provided for future extensions East of SH 5 and future storm sewer improvements along SH 5. All underground utility crossings were identified in profiles ensuring clearance was provided between utilities.

Fire hydrants were strategically added along the corridor to address FDC connection spacing and fire department spacing requirements. Water line stubs were provided at cross streets to address future water line extensions. Valve locations were designed to isolate water lines to accommodate future connections and facilitate flushing plans for city acceptance.

16" Bore on Louisiana Street at SH 5

Atzuko Reveles, PE
Principal Engineer | W/WW Lead
New Mexico PE #22651
MS / Civil Engineering
BS / Civil Engineering

Percent of Time Assigned: 50%

Atzuko is a licensed engineer in the State of New Mexico with more than 18 years of experience in site civil, master planning, construction of retaining walls, water, stormwater, wastewater, condition assessment, SCADA, modeling, and vertical projects. He has experience with water system design, hydraulic modeling, pipeline asessment, and air, water, and soil sampling. He has led more than 15 El Paso Water (EPW) projects and has in-depth knowledge of EPWs process and procedures. He can aid with EPW coordination, oversight, and additional EPW utility requirements.

Atzuko's experience includes project and construction management, capital improvement programs, hydraulic modeling, facility assessments, and design in water, stormwater, and wastewater systems and an assortment of related activities. He has performed a variety of design and engineering services for the City of Las Cruces, Elephant Butte Irrigation District, NMDOT, El Paso Water, Lower Valley Water District, Texas Military Department, El Paso Electric, and City of El Paso.

South Jornada Water System Improvements (Phases I and II), City of Las Cruces, Project Engineer. This two-phase project included a new 2-million-gallon steel water tank, 19,000 feet of 24-inch ductile iron pipe, and two new 3,000 gpm booster stations. Designed 19,000 feet of 24-inch water transmission pipeline (DIP). Designed the mechanical components of the new steel water tank. Performed calculations to size the tank overflow, pipe restrained joints, and sized CARV in pipeline using Air Valve software. Coordinated design efforts with various engineering disciplines for the completion of the overall design.

Automatic Meter Reading – Feasibility Study, City of Las Cruces, Project Engineer. Evaluated the economic feasibility of changing to an automatic meter reading system for the natural gas and water meters for the City of Las Cruces and for the Rio Grande Natural Gas Association. The study comprised approximately 30,000 water meters and 47,000 gas meters of varying sizes. Interviews with various city departments were conducted as part of the assessment.

Water Distribution System Operation and Maintenance Manual, City of Las Cruces, Project Engineer. Updated and revised the City of Las Cruces current operations manual. The updates included the addition of a section for the 10 pressure zones requiring a review of their geographical delineation using GIS software.

STRUCTURAL

JMT has experience in the analysis and design of all types of building structures and infrastructure. We have a keen knowledge of the building code requirements for any area and have a program of continuing education to ensure that our engineers and designers are updated and completely familiar with regulation changes as they develop. Our approach will follow project requirements and define special items and experience as to form, material, longevity, and functionality. JMT will then evaluate the ever-changing complexities of building codes and design regulations to apply our expertise and streamline designs from complex material selection to facility design aesthetics for existing building designs or even historical property requirements. JMT will implement the latest design standards. Our structural designs will incorporate provisions for **high wind loads and other environmental conditions including "sugar sand" as is commonly found in our area,** condition assessment and rehabilitation/reinforcement needs for existing systems and protection against deterioration in corrosive and other chemical hazard environments.

Services

- Transportation Structures
  - Bridges over water, highways, and railroads
  - Pedestrian bridges
  - Culverts
  - Retaining Walls
  - Noise Barriers
  - Sign Structures
- Facilities Structures
  - Office Buildings
  - Industrial Buildings
  - Retaining walls
  - Water/wastewater treatment plants
  - Building additions/renovations
  - Equipment/piping supports
  - Renovation and analysis of existing structures
  - Underground Vaults and Manholes
  - Specialty Structures

JMT provided structural engineering services for a new **Fire Station on Otranto Rd. in North Charleston**. The Station has a 4,000 sf, 3-bay Apparatus Garage framed with 9 ft deep steel trusses spanning over the 52 ft width of the garage.

Chris Reddick
Structural Lead
Texas PE# 82185
MS / Civil Engineering

Percent of Time Assigned: 40% - 50%

Chris is a civil/structural engineer with over 33 years of experience in design, detailing, and construction administration of new buildings and miscellaneous structures, as well as the inspection, assessment and analysis of existing facilities. Chris has prepared design and renovation construction documents for steel, concrete, masonry, and timber framed buildings. He has also designed repairs and modifications for existing steel, concrete, and timber framed buildings. His experience includes design of healthcare, office, retail, residential, and specialty structures, as well as addition of floors to existing structures. Chris also has experience with design and assessment of buildings in seismic and hurricane zones. Chris also has performed industrial facility maintenance inspections and evaluations and has prepared repair drawings for in-service industrial facilities.

Comprehensive Architectural and Engineering Design, Anne Arundel County, MD. Structural Engineer. Since 2001, this contract is the latest in a series of six consecutive on-call task order design contracts that JMT has performed for the MDOT MAA. Under these contracts, JMT has provided comprehensive design services, structural engineering, and program/project management services. Tasks he has worked on include:

Bus Maintenance Facility Equipment Replacement: Task included upgrades to the existing bus maintenance facility serving the rental car campus at BWI including structural engineering. The existing bus wash and associated reclaimed water system were replaced in their entirety with modern, heavy duty, transit rated equipment. Additional bus service equipment including vacuum systems, pressure washers, air compressors and dryers were also replaced. As part of the upgrades to the facility, a flame and gas detection system was provided to meet applicable codes due to the CNG fueled busses cleaned and repaired at the facility.

DX-DY HVAC Upgrades: Supervised the production of the structural construction documents of the replacement of air handler units on the existing roof of the Dx-DY concourse terminals. Responsible for structural analysis of new roof top HVAC upgrade equipment support as well as on grade level replacement of cooling tower. Project involved evaluation of existing roof structure capacity and reinforcement requirements for increased loading conditions.

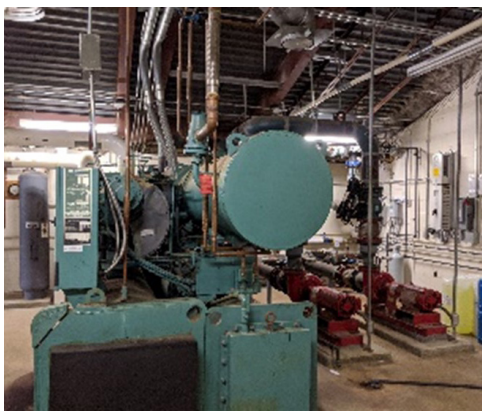
MECHANICAL AND HVAC

Our mechanical engineers are well-versed in evaluations, design, rehabilitation, and system improvements. JMT's focus on energy efficient and controllable systems which deliver occupant comfort, limited maintenance, and upgradable characteristics if changes to the workplace environment occur in the future. Our HVAC designs are based on energy efficiency, indoor air quality and system redundancy, using the latest computer load simulation software that performs an analysis based on the standards of the American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE). **The HVAC design approach reviews alternate system modeling focusing on identifying the best Return On Investment [ROI] while incorporating the USGBC objectives for LEED compliance.** This includes proper air balance for maintenance of indoor air quality, part-load equipment sizing and energy efficiency, effective building automation logic utilizing either DDC (BACNet or Lon) or self-contained controls, and code compliance.

Services

- Field Surveys
- Code Analysis
- HVAC and Building Controls Design
- HVAC Load Calculation and Design
- Development of Building Energy Modeling
- Acoustic Sensitivity in HVAC Design
- Plumbing Design
- Fire Protection/Life Safety
- Design Approvals and Permits

JMT holds an on-call services contract for **Chesterfield County Public Schools (CCPS) and Chesterfield County General Service**s. JMT is providing mechanical engineering survey, design, and construction support services for like-capacity chiller replacements at four schools for Chesterfield County Public Schools (CCPS) - Hopkins, Spring Run, and Wells Elementary Schools and Meadowbrook High Schools. Part of the effort on this task order involves evaluation of the existing chilled water plant sequence of operations and refrigerant leak detection safeties and protocols. The goals of the evaluations are to identify potential operational energy improvements and verify compliance with current Mechanical and Energy Code requirements.



Bryon Wender
Mechanical and HVAC Lead
Maryland PE# 57981
BS / Mechanical Engineering

Percent of Time Assigned: 40% - 50%

Bryon has 19 years of experience in mechanical engineering. He has extensive HVAC experience, working as a project engineer, commissioning technician, and construction administrator. He has expertise in performing facility assessments, retro-commissioning, commissioning, systemic renovations, and new construction for design-bid-build and design-build contracts. He has thorough working knowledge of industry-standard HVAC systems and specialized experience with central plant, heat recovery variable refrigerant flow, chilled beams, induced air, total air side energy recovery, geothermal heating and cooling, variable air volume, and steam systems. He has in-depth systems experience including but not limited to heat recovery variable refrigerant flow (VRF), chilled beams, induced air, total air side energy recovery with desiccant dehumidification, geothermal heating and cooling, variable air volume (VAV), and steam systems. He has a thorough working knowledge of LEED design guidelines.

2nd Floor Library Resource Center Renovation, NAVFAC, Bethesda, MD, Mechanical Engineer. Naval Support Activity Bethesda required the renovation of the existing second floor stack and study area into office space at the Uniformed Services University of Health Sciences Library Resource Center (LRC). Includes; updating space layouts for open and enclosed offices and a break room, as well as the associated mechanical, electrical, plumbing, and fire protection system modifications. Mr. Wender led the mechanical, plumbing, and fire protection design and was the primary point of contract from JMT.

Building 33 Laboratory Construction Fire Rated Ceiling Assemblies Additional Mechanical Shafts, FBI, Quantico, VA, Mechanical Engineer. The building had five mechanical shafts that terminated closets located on the basement level of the building. Mr. Wender coordinated the mechanical and fire protection design for conversion of the existing shaft space to usable storage areas. The project tasks included the provision of a new fire rated ceiling, modified sprinkler layouts, and coordination of access for above ceiling compressed air, supply and exhaust ductwork, and heating and chilled water piping systems.

ELECTRICAL AND SCADA

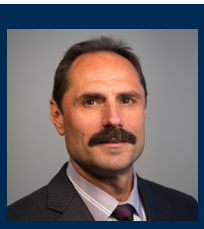
JMT focuses on code compliance, integration with the utility provider, and limited risk during construction. Our electrical designs follow the latest NEMA standards. We provide analysis and design of medium and low-voltage power distribution including switchgear, transformers, sectionalizing switches, underground manholes, duct banks, motor control centers, and emergency power. For your wells, booster stations, lift stations, and odor control stations, our engineers will develop lighting, power, grounding, instrumentation, and power protection one-line diagrams, utilizing the latest industry software. Our team will ensure that early grounding modeling studies are considered during predesign efforts. It is often not included in projects resulting in severe damage to expensive electrical equipment. As needed and to have an early understanding of your water and wastewater systems, our team will model low and medium-voltage short-circuit, load flow, arch-flash studies. **Our instrumentation and control (I&C) designs provide new control strategies and process control narratives for any lift station and booster pump station that meet the utilities department current design and control philosophy.** Updated controls can provide remove monitoring and control of the pump station previously not available. All necessary contacts and power connections for the proper operation of the SCADA system shall be provided with every task.

Services

- Field Surveys
- Code Analysis
- Electrical Systems
- Lighting
- Grounding Modeling
- Fire Protection Evaluations
- Design Review
- Design Approvals and Permits
- Drawing Coordination
- Engineering Calculations Backcheck

For the **Walter Reed National Military Medical Center Buildings 9 & 10 Electrical Upgrades**, JMT gathered information from existing power distribution equipment needed to model the electrical distribution system and validate the short-circuit study and arc-flash analysis provided by the government. We coordinated the available fault currents at the main utility substation with PEPCO to provide our engineers with the necessary information to model the power distribution system using SKM software and develop a short circuit and breaker coordination study and arc flash analysis.

JMT provided the necessary device selection and settings to fully coordinate the emergency power system.



Dimitre Petrov
Electrical and SCADA Lead
Texas PE# 140494
BS / Electronics

Percent of Time Assigned: 40% - 50%

Dimitre has more than 33 years of experience in electrical engineering design including data and telecommunications. His experience spans renovation and new construction of electrical systems, power generation, and power distribution. He has a strong knowledge of computer design and drafting for panel layouts, assessing electrical load requirements, and distribution routes. Dimitre is a member of the Institute of Electrical and Electronic Engineers and Industrial Applications Society. Project responsibilities have included studies, specification, and construction cost estimating for power distribution, lighting and communication systems, design for electrical distribution, substations, switchgear, wiring diagrams, instrumentation, control layout, and instrument specifications. He plans wiring diagrams, connections to existing systems, and installation of devices for telecommunications and computer-driven equipment.

NT-CT Substation Replacement, Baltimore/Washington International Airport, Anne Arundel County, MD. Electrical QA/QC Manager. Provided design services for replacement of 2 double-ended substations in the same location, with only minor outages to the load. This project involved a very complicated phasing plan in order to minimize the outages. The design included upgrading the cooling, both ventilation and air conditioning, to keep the substations below 40° C ambient. The existing substations were 2000 kVA upgraded to 2500/3333 kVA, hence the need for additional cooling. The loads had to be temporarily fed from nearby substations 200' away. Temporary feeders were installed on the roof for the backfeed. Electrical rooms were created near each substation to house the distribution panels that backfed the existing loads. The distribution panels were fed from the temporary feeders and ultimately from the new substations.

Comprehensive Professional Design Services at BWI Marshall and Martin State Airports, Anne Arundel County and Baltimore County, MD. Electrical Engineer. Concourse DX-DY Chilled Water Plant Replacement at BWI Marshall (2019). The electrical scope for the project centered around removing the electrical feed for two existing chillers and their associated VFDs, two existing cooling towers, and pumps associated with the chillers and cooling towers. The existing chillers were replaced with new chillers in the same locations. Temporary 800A electrical feeds were provided to supply the temporary chillers. The existing 800A circuit breakers that supplied the existing chillers were replaced with 1200A circuit breakers to supply the new chillers.

ENVIRONMENTAL

JMT has a staff of highly skilled environmental specialists capable of NEPA documentation, 4(f) compliance, environmental impact studies and assessments, wetland identification and delineation, watershed assessment and planning, natural resources and wildlife habitat identification, stream and streambank assessment, natural channel design, and community impact assessments to support land use, greenways, open space, parks and recreation, and transportation studies, as well as project development. **Our approach follows a typical environmental anatomy of action being proposed, its environment, evaluation and alternatives that would impact each environment.** JMT constantly coordinates with Federal, State, and local agencies to secure environmental and regulatory permits to ensure compliance with current regulations and to meet previous commitments outlined during project planning efforts and pre-application discussions with regulatory personnel.

Services:

- Lead, Asbestos, Radon Investigations
- Phase I-III Hazardous Material Investigations
- Air quality and Noise Analysis
- Environmental Sampling and Mitigation
- Brownfield Site Redevelopment
- Environmental Remediation and Design
- Geomorphology and Stream Restoration
- Natural Stable Channel Design
- Wetland and Water Delineations
- NEPA Compliance and Documentation
- Clean Water Act Section 10/404 Permitting
- Threatened and Endangered Species Habitat Surveys
- Historical and Cultural/Archeological Resources.

For the West Baytown Storm Sewer Improvements (Phase I), JMT performed an Environmental Site Assessment (ESA) in general accordance with ASTM E1527-13 Standard Practice. The Phase I ESA identified several locations that were considered Recognized Environmental Conditions (RECs). A Phase II ESA was conducted to confirm or deny the presence of contaminated soils and groundwater in the vicinity of the RECs. We conducted additional environmental studies that included a Wetland Delineation and USACE Verification; T&E Species Habitat Assessment; Cultural Resources Desktop Review, Clean Water Act Section 404 permitting, and Port of Houston submerged lands permitting.

Ryan Robol
Environmental Lead
MS / Environmental Studies
BS / Biology

Percent of Time Assigned: 40% - 50%

Ryan has 22 years of environmental consulting experience. His current responsibilities as the Section Head of JMT's Natural & Cultural Resources group in Texas includes providing technical guidance and expertise, mentoring JMT's environmental staff, business development and marketing, and overall growth of the program within Texas. His technical background is related to natural resources, including wetland delineations and US Army Corps of Engineers permitting. He also boasts diverse experience managing the preparation of NEPA documentation and obtaining environmental clearances for large public-sector projects, from conducting species-specific field surveys to conducting Phase I Environmental Site Assessments. Ryan has the expertise to take his clients' projects from conceptual "back of the napkin" drawings to "in the ground" implementation as efficiently as possible. He is experienced with complex environmental permitting associated with land development, transportation, civil infrastructure, coastal and water resources development projects.

Ryan currently manages four active contracts with TxDOT, including a Statewide NEPA Documentation contract, a Statewide Biological Resources contract, a Statewide Water Resources Documentation and Permitting contract, and a TxDOT HOU Environmental Documentation contract. Many of the work authorizations that come out of these contracts include short-term duration activities with tight schedules.

Staff Augmentation Services, Harris County Flood Control District, Harris County, TX. Project Manager. Ryan serves as Project Manager in his role of staff augmentation within the Environmental Services Department at the Harris County Flood Control District. Ryan's contributions include both administrative and technical-related tasks. Administrative-related tasks include project scoping, reviewing cost estimates, approving work authorizations, tracking progress, approving invoices, and project closeout. Technical related tasks include reviewing task deliverables prepared by contractors, providing comments and recommendations for improving report quality, tracking all comments to resolution, and interfacing with resource and regulatory agencies for securing environmental permits. Projects on which he works under this contract include both large-scale drainage capital improvement projects (i.e., regional detention basins, channel deepening / widening) and maintenance projects (i.e., infrastructure repair, erosion repair, channel desiltation).

ROADWAY

JMT has a staff of transportation and urban planners, roadway and traffic engineers, environmental specialists, landscape architects, surveyors, and public relations specialists to provide a wide array of transportation engineering and planning services. JMT has worked on multiple local roadway design projects from sidewalk improvements to multi-lane urban corridor widening. **Our staff is well versed with design standards, policies, and procedures, AASHTO guidelines, and International Building Code (IBC). JMT is a leader in BIM / CIM technology.** We currently use MicroStation V8i Select Series 4 with OpenRoads technology for full 3D designs along with Autodesk Civil 3D. Our modeling expertise helps identify risks earlier in the design project lifecycle when the ability to reduce project cost is higher.

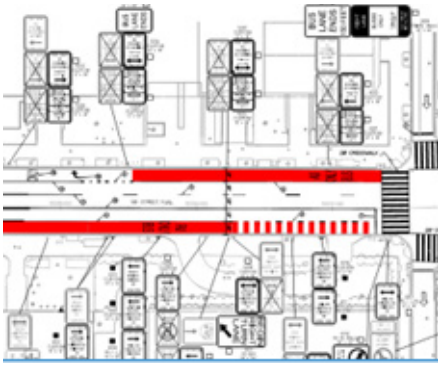
JMT employs a collaborative, context sensitive, and holistic approach to rethinking the public space that is dedicated to transportation. JMT has extensive experience in integrating bicycle and pedestrian facilities into streetscape projects. We have completed award-winning designs that provide seamless integration of modes. Our project resume includes all types of bicycle facilities from basic signing and sharrows, to dedicated and separated lanes, to off-road and multi-use trails.

Services:

- Conceptual Layout & Analysis
- Roadway Design
- Green Infrastructure Design
- Complete Streets Development
- ADA Compliant Facility Design
- Pavement Treatment Analysis and Selection
- Rail Design and Coordination

Traffic Impact Studies, Transportation Modeling Studies, and Signal Design: These studies could include performing crash analysis and safety studies, corridor analysis, transportation systems management studies, traffic signal timing plans, signal warranting and roundabout analysis, parking studies and capacity analysis and congestion mitigation. Other studies could include lighting analysis, reviewing developer plans and traffic impact analysis reports, and developing alternatives. Computer modeling such as Highway Capacity Software (HCS), Synchro (SimTraffic), VISSIM, PTV Vistro or SIDRA Intersection will be used to analyze traffic operations. Photometric analysis will be conducted using AGI32.

JMT is the lead designer of the Citywide Traffic Engineering Design Contract for DDOT Washington DC.



Gerard (Jerry) Baxter, PE, PTOE
Roadway Lead
DC Registered PE# PE908595

Professional Traffic Operations Engineer No. 2119

MBA / Business Administration
BS / Civil Engineering

Percent of Time Assigned: 40% - 50%

Jerry has 22 years of experience in conducting traffic safety studies and preparing engineering plans in an urban and multi-modal environment. He has led several on-call contracts where he is responsible for the overall management and delivery of the project including ensuring that personnel and resources are available as needed. His skills include providing direction, contract management, fostering relationships, discretion, and fostering a culture of excellence and accountability. He has strong communication and technical skills including written correspondence. He has a deep understanding of roadway/traffic standards, drawings, and specifications. He fosters cross-discipline coordination and utilizes computer applications for efficient management. His management skills have been developed from practical experience and education including his master's in business administration.

Citywide Traffic Engineering Design, DDOT, Washington, DC, Project Manager. Managed multiple assignments on to address high crash and problem intersections as part of the annual Highway Safety Improvement Program (HISP).

16th Street NW Bus Lanes project provided peak period, peak direction bus-only lanes for the 2.7-mile corridor from Arkansas Avenue NW to H Street NW. The PS&E development was completed on an accelerated schedule. Elements included topographic survey, utility designation, and geometric, ADA and sidewalk, drainage, ESC, SWM, utility, traffic signal, ITS, signing, markings, and landscaping.

Virginia Avenue Protected Bike Lanes designed conceptual traffic engineering design for a two-way cycle track along Virginia Avenue NW between 18th Street and Rock Creek Parkway. Developed conceptual roll plans detailing parking impacts, two-way cycle track location, geometric changes, and any lane use configuration updates. Design was developed to incorporate proposed bicycle facilities on crossing roadways including G Street NW two-way cycle track and FHWA project on Rock Creek Parkway.

7th Street NW Busway designed a car-free roadway in the heart of downtown. The corridor was designed to allow buses, trucks, and bikes to use the corridor. Project elements included sidewalk extensions, micro-mobility corrals, red top meter modifications, and designated pickup/drop-off (PUDO), loading, and food truck zones. Maintenance of traffic and signing and marking plans were prepared.

STORMWATER AND DRAINAGE

JMT has a keen understanding of stormwater events and the need to carefully integrate critical infrastructure projects into the existing fabric of the landscape. We pride ourselves on our ability to work with clients to develop solutions that not only serve specific project needs, but create environments that are truly context-sensitive, sustainable, and are amenities to the communities they serve. JMT's water resource and civil engineers, landscape architects, environmental scientists and technicians are experienced in providing innovative stormwater management mitigation and retrofit solutions at the local, county, and State levels for both public and private clients. JMT's technical approach is to define and utilize the Best Management Practices (BMP), stormwater pollution prevention plan (SWPPP), to the Maximum Extent Practical (MEP). This approach consists of analyzing, assessing, budgeting, and identifying appropriate and cost-effective BMP solutions. **Together with our environmental and landscape architectural staff, we combine hydrology, hydraulics, water quality, ecology, and constructability to ensure sound sustainable designs with minimal disruption to the surrounding neighborhood.**

Services:

- H&H Analysis
- Hydraulic Modeling/Planning
- Master Watershed and Stormwater Modeling
- Stormwater System Rehabilitation/Capacity Improvements
- Development Review
- Stormwater Ordinance Review and Revisions
- Stormwater System Details and Specifications
- Floodplain Studies
- FEMA Coordination
- External Corrosion Control
- SWPP

Drainage Studies: Our team of highly qualified civil and environmental engineers is ready to provide innovative solutions to the City's drainage problems. JMT has a long track record of studying and developing detailed designs for clients across the county, including surface drainage designs for open and closed systems, stormwater management design, floodplain studies and management, hydraulic analysis, and more. JMT's strength is in the diverse project teams we assemble, our experience working with municipalities across the county and with a wide variety of permitting agencies gives us unique insight into challenges we may encounter. We are confident that the JMT team can meet any need the City has and provide high-quality solutions to any unique challenges that present themselves.

Tara Alexander, PE, CFM
Stormwater and Drainage Lead
Texas PE# 109548 | CFM# 3778-19N
BS / Civil Engineering

Percent of Time Assigned: 40% - 50%

Tara has over 23 years of experience in water resources engineering including roadway drainage design, storm water system design, culvert and inlet design, hydrologic and hydraulic analysis of drainage natural waterways, FEMA CLOMR and LOMR submittals, Water Pollution Abatement Plans (WPAPs), detention and water quality basin design, and complex hydrologic analysis using hydraulic routing in urban and rural environments. She has designed complex drainage for freeways, arterials, and collectors. She has a thorough understanding of drainage design criteria that includes determining peak runoff and designing culvert crossings, storm sewers, and inlets. She also has significant experience preparing hydraulic reports, drainage plans, and PS&E submittals.

Kelly Lane, City of Pflugerville, TX. Drainage Project Manager. To improve safety and accommodate current and future growth along the Kelly Lane Corridor, the City identified a roadway improvement project to widen Kelly Lane from a two-lane undivided roadway to a fourlane divided roadway from W. Falcon Pointe Boulevard to Moorlynch Avenue. JMT performed the schematic design, ROW determination, final construction plans, and specifications for the project. Tara provided hydrologic design oversight and performed complex hydraulic analysis.

The FEMA hydrology project was performed in 2016, prior to the Atlas14 updates to the rainfall depths. The hydrology for the Wilbarger Creek Watershed was updated and served as the basis for the hydraulic analysis at Vilamoura Street. The revised hydraulic study revealed the existing crossing was deficient, and the 100-year WSEL was overtopping Kelly Lane. Tara determined the 100-year flood would rise within the channel with updates to Kelly Lane and identified the limits for channel improvements in conjunction with additional relief structures at the bridge directly upstream of the crossing. Tara performed several crossing configurations at each roadway, and preliminary grading plans to provide the client with several cost-benefit solutions and the resulting hydraulic impacts of each.

The hydrologic analysis determined there would be additional peak runoff at the project outfalls at each location form increased impervious cover and shifting high points in the roadway. Tara provided a solution to the client for mitigating adverse impacts, by eliminating ponds and associated property acquisition to mitigate the increased 100-year WSEL.

GEOTECHNICAL

JMT's professional geotechnical engineering team is experienced in developing design recommendations for an extensive variety of projects. In addition to our design recommendations experience, our geotechnical engineers are experienced in construction inspection and testing, which allows for the **incorporation of recommendations and warnings of conditions into the design documents that should be expected during construction.** Our geotechnical lead will work with a local geotechnical engineering firm and will coordinate testing services, such as soil test borings, rock coring, test pits, in-situ testing and geophysical studies.

Services:

- Third Party Design Review
- Geotechnical Assessments
- Constructability Review
- Cost Estimates
- Scope of Work Development
- Technical Advisor

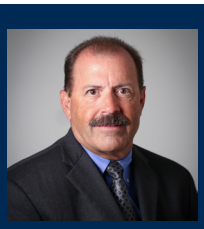
SITE DEVELOPMENT

JMT has experience preparing site design plans for a variety of projects. We have experience working with public clients and private developers. **We also have developed "outside the box" thinking to analyze projects for cost-saving measures** and have developed innovative design techniques to minimize impacts associated with the projects.

Services:

- Site Layouts, Design, and Conceptual Site Design
- Stormwater Management Plan: Grading and Drainage, CBPA compliance, and SWMF Design. Etc.
- Utility and Lighting Plans
- ADA Compliance
- Erosion and Sediment Control Plan
- Landscaping Plan
- Roadway Improvement Plans
- Utility Extensions
- Master Drainage Plan Updates
- Land Use Determinations and Preparations of Project Specifics
- Land Use Permits
- Easement Documents

Our experienced staff of professional engineers, planners, and wetland scientists frequently prepares comprehensive environmental studies, assessments, and designs, and develop site layout and grading to minimize impacts to environmentally sensitive areas (forests, streams, historical) and to minimize earthwork. JMT also incorporates LEED® principles into the site design.



Mike Leffler
Geotechnical Lead
Maryland PE# 13725
MS / Civil Engineering

Percent of Time Assigned: 40% - 50%

Mike has 44 years of experience in geotechnical engineering and construction inspection services. His experience includes the management of hundreds of projects and the development of field investigation programs including test boring/test pits, CPT, DMT, BST and PMT, geophysical, groundwater wells, permits to work in wetlands/waterways, geotechnical analysis and preparation of reports to provide geotechnical design for low to high-rise structures, sheet-pile bulkheads, piers, wharfs, site/consolidation/stabilization, soil, rock and reinforced slopes, and utilities.

Lake Montclair, Prince William County, VA: Principal Engineer. Responsible for oversight of subsurface investigation, which included test borings and piezometers, soil laboratory testing and geotechnical evaluation of existing 80-foot-high embankment dam to evaluate seepage on downstream slope and seepage into box culvert, which penetrated the embankment dam. Geotechnical evaluation consisted of review of available information, stability and seepage analysis to provide recommendations for additional drains to control seepage and mitigate erosion and for sealing leakage into the box culvert.

Gerardo Garcia, PE, CCM
Site Development Lead
New Mexico PE# 29301
MS / Construction Management
BS / Civil Engineering

Percent of Time Assigned: 40% - 50%

In addition to site development experience, Gerardo has more than ten years of experience in Construction and Project Management, planning and scheduling, contract compliance and administration, civil design, cost estimating, and quality control and assurance. He has a strong background in developing project schematics, design, technical specifications, scheduling, construction cost estimates, and contract bid packages.

Consolidated Rental Agency Complex, El Paso International Airport, Project Engineer. As the Project Engineer for civil design with elements of grading design, concrete and asphalt pavement design, storm sewer design, water line, and sanitary sewer design. He was also responsible for developing and preparing project schematics, project design, technical specifications, construction cost estimates, and contract bid documents, and coordinating with owners, subconsultants, staff, and utilities.

NATURAL GAS

JMT has successfully provided engineering services for natural gas infrastructure. Our engineers have completed pipe designs of various diameters and pressures. Recently, we completed the R-2588B Project for Dominion Energy North Carolina. It consisted of approximately 16,500 linear feet of 8-inch high-pressure steel pipe and 8,700 linear feet of 8-inch HDPE. For the same client, we also completed the Riverside Drive Gas Main Relocation Project. It included the design of approximately 790 liner feet of MDPE due to an emergency prompted by slope failure along the existing route. **Our engineers have the capacity to complete design work on planned projects but in emergency situations as well.**

Services:

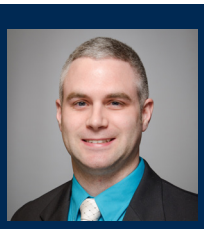
- Field Survey
- Subsurface Utility Engineering (SUE)
- Gas Utility Design
- Construction Drawings
- Computer Network Analysis
- Pipe Design

PROJECT MANAGEMENT AND INSPECTIONS

JMT has over four decades of experience in providing project management services for federal, state, and local government agencies. Our project management department offers a full array of management and support services including project and construction management, inspection, project scheduling and claims analysis. **We are recognized for our ability to aggressively anticipate potential problems and recommend solutions before projects are adversely affected**, enabling the City to maintain schedule, costs, and quality. As an engineering firm specializing in the planning, design, inspection, and project management of infrastructure projects, our experience includes both vertical and horizontal projects. JMT has administered project management and inspection for the City of Las Cruces during the 2018 Bond Program and is currently providing oversight and inspection for the RoadRunner Transit and Operations Center. Several of our project management contracts have been with repeat clients, which is indicative of their satisfaction with the quality of service we provide.

Services:

- Program, Project, and Construction Management
- Pre-Construction Services
- Procurement Support
- Design Review
- Utility Coordination
- Permitting Coordination
- Cost Estimating
- Schedule Management
- Value Engineering
- Construction Inspection
- Pay Application Review
- Change Order Review
- Earned Value Analysis



Steven Pickel, PE
Natural Gas Lead
PE# 135500 (TX)
BS / Civil Engineering - Environmental Concentration

Percent of Time Assigned: 40% - 50%

Steven brings 22 years of experience leading water utility clients who have relied on his creativity and reliability to deliver timely, expert, and economical results in their pipeline construction projects. His expertise encompasses design and CADD management roles and spans all aspects of planning and design for natural gas pipes. His leadership has brought success to a wide variety of projects that include condition assessment, rehabilitation, new installation, and design for replacements and relocations. Steven's expertise also includes strengths across the full range of trenchless pipeline design methods. His major water utility clients have trusted him to deliver a detailed peer review of designs prepared by other consultants.

City of Rockville, MD, Southlawn Office/Industrial Center Water & Sewer Utilities Extension, Rockville, MD. Designer. Designed 1,110 LF of 12-inch ductile iron water main. Completed the bid document drawings which contained plans and profiles and included water house connection tables and details. Designed a PRV and division valve vault associated with the project to 30% until it was separated from the water main design due to necessary coordination between the City of Rockville and WSSC.

Arturo Gonzalez, RA, GGP
Project Management and Inspection Advisor
Texas RA #11529 (TX)
BAE / Architecture

Percent of Time Assigned: 40% - 50%

Arturo is a Registered Architect in the State of Texas with 35-plus years of construction experience in architecture, project management, and project control. He understands projects from conceptual design, estimating, and material shop drawings to construction and delivery. He has experience with federal, industrial, residential, and educational projects within the public and private sectors. Arturo has managed multiple projects for institutional clients, including the City of El Paso, El Paso Water, Sun Metro, and the Housing Authority of the City of El Paso.

Arturo was the Program Manager for the 2018 GO Bond Program, City of Las Cruces and is the current Project Manager for the RoadRunner Transit and Operation Facility.

Additional Services and Tasks

Master Planning: Our firm is experienced in the preparation of master planning for various fields including transportation, utilities, and facilities. We can assist completing the full-blown master plan or complete individual tasks including capital planning and programming, facility assessment, GIS planning, alternatives analyses, asset planning and management, land use planning, stakeholder meetings, hydraulic modeling, cost estimating, process optimization, or cost estimating. For transportation, we are currently working with DoD, municipality, and state and federal agencies in improving agency GIS-planning capabilities by fully integrating GIS and data management into their planning systems. In several cases, our team built the data management system for our clients. Our team has the support of master planners, architects, traffic engineers, landscape architects, civil engineers, and urban designers, who work collectively to solve the largest of planning exercises on time. For utilities, one of our recent master plan engagements include the **Water System Master Planning & Capital Programming Project** for the City of Baltimore (MD). Our engineers will be able to help you with your master planning needs and we will make our local team ready to apply our company expertise to help you determine the utility needs for the short and long term.

Claims Reviews: JMT understands that not all claims are valid, and we evaluate each claim for entitlement first before performing a detailed analysis of cost or time. We first identify the type of claim submitted by the contractor such as differing site condition, superior knowledge, disruption, loss of productivity, ambiguity of specifications, defective specifications, design error, loss of efficiency and other owner related causes, which will guide our approach to defense. Our next step is to determine whether the claim has merit (the contractor is entitled to compensation). Only after merit has been established, based on the specific situation and case law, will we proceed to determine the quantum (time and costs) of the claim. This prudent approach results in the most cost-effective claims analysis services by not expending time and money on a detailed review unnecessarily.

JMT acknowledges that an effective claims review must be performed in a professional and timely manner, which clearly identifies the construction, legal, and financial issues involved, and evaluates their impacts on each construction claim under review. We will provide objective and valid conclusions that the City of Las Cruces can use to successfully resolve the disputes represented by the claims.

Our goal is to preempt or equitably resolve all issues as they arise. JMT will support the City of Las Cruces with claims that are not able to be resolved during the project. **The JMT Team employs licensed professionals that are industry experts and have testified as expert witnesses.**

Cost Management: JMT understands that budget and cost control are fundamental to the effective management of any project. The development of a comprehensive fee estimate for each assigned task is critical to reliably and accurately budget and track the project activities. JMT is well-versed in establishing detailed project budgets which include all the project costs and will integrate cost and schedule estimating tools into the project control system to ensure all tasks remain within budget. Throughout the planning process, the JMT Project Manager (PM) will participate and provide design and construction expertise to the planning team. The PM will focus on the following areas:

- Identifying preliminary project budgets and costs.
- Developing the project master schedule.
- Proactively identify challenges to mitigate budgetary impacts.
- Assist the City in receiving the greatest return on their investment.

Schedule Methodology: JMT places a very high priority on completing projects on schedule and within budget and implements customized project control systems to meet the needs of individual projects and tasks. Throughout the planning process, the JMT Project Manager will participate and provide design and construction development expertise to the planning team. The PM will focus on the following areas:

- Identifying preliminary milestones, restrictions, and design phasing.
- Set up project budgets and costs.
- Develop the project master schedule.
- Keeping a close eye on the critical and "near-critical" paths for trends before they impact the critical path.

The Project Manager will prepare and submit a baseline schedule for review and approval. JMT will develop schedules to mitigate anticipated delays by proactively identifying these critical milestones and incorporating steps early in the design process to address them. The baseline schedule is distributed to the project team and is used as a management tool to monitor and control the progress of the project. The schedule will be regularly reviewed at the weekly progress meetings.

Quality Control/Quality Assurance: JMT will rely on discipline-specific engineers and senior technical reviewers to ensure our work receives an appropriate level of review by a seasoned professional. Our internal QA/QC review process is often performed in Bluebeam Studio to ensure all issues are resolved and quality control checks are completed. We use JMT's custom 5-Step Bluebeam Process, which follows:

1. Reviewers use custom JMT tools to place comments in Bluebeam or PDF docs.
2. Engineers accept, reject, or defer comments with detailed responses.
3. Designers address each comment marking them corrected.
4. Designers check each corrected comment and mark them backchecked.
5. Engineers complete the final review and mark each comment verified.

Project Schedule

GENERAL ENGINEERING SERVICES - SAMPLE SCHEDULE

ID	Task Name	Duration	Start	Finish
1	**Sample Engineering Project**	**265 days**	**Mon 3/4/24**	**Fri 3/7/25**
2	Notice to Proceed	1 day	Mon 3/4/24	Mon 3/4/24
3	**Project Set-Up and Scope Coordination**	**30 days**	**Tue 3/5/24**	**Mon 4/15/24**
4	Complete PMP	5 days	Tue 3/5/24	Mon 3/11/24
5	Preliminary Survey	15 days	Tue 3/5/24	Mon 3/25/24
6	Geotechnical Study	15 days	Tue 3/26/24	Mon 4/15/24
7	Preliminary Coordination	15 days	Tue 3/5/24	Mon 3/25/24
8	**Preliminary Design Plans & Specifications**	**34 days**	**Mon 3/4/24**	**Thu 4/18/24**
9	Development of Schematic Plans & Specifications	14 days	Tue 3/5/24	Fri 3/22/24
10	Client Review of Documents & Specifications	14 days	Mon 3/4/24	Thu 3/21/24
11	Modifications of Documents	10 days	Fri 3/22/24	Thu 4/4/24
12	Client Final Review of Documents	10 days	Fri 4/5/24	Thu 4/18/24
13	**Design Phase**	**89 days**	**Mon 3/4/24**	**Thu 7/4/24**
14	30% Design Submittal & Review	20 days	Mon 3/4/24	Fri 3/29/24
15	60% Design Submittal & Review	20 days	Fri 4/5/24	Thu 5/2/24
16	95% Design Submittal & Review	20 days	Fri 5/3/24	Thu 5/30/24
17	100% Design Submittal & Review	20 days	Fri 5/31/24	Thu 6/27/24

Performance of the Firm

MCKINNEY ON-CALL ROADWAY DESIGN – RIDGE ROAD FROM US 380 TO WILMETH ROAD, TX

JMT has the expertise and experience required to support the City of Las Cruces with roadway design services. Our experience includes the design of residential, collector, and arterial improvements and we offer a broad range of services including alternatives analyses, parking lot, street lighting design, final plans preparation, specifications, cost estimates, bidding documents, as well as post design support. Our engineers also have extensive experience with intersections and alley improvements, and we are adept at preparing final design plans for streets and drainage improvements, traffic signals, signing and pavement markings, structures, ITS, environmental studies, permitting, and traffic control plans. Recently for the City of McKinney (TX), our roadway engineers completed the McKinney On-Call Roadway Design – Ridge Road from US 380 to Wilmeth Road Project. This $17.8 million four-lane divided urban arterial on new alignment, included twin 600-foot bridges over Wilson Creek and a multi-lane roundabout at Wilmeth Road. The alignment was adjacent to and parallel to an existing 36" wastewater and 33" water line.

As part of our services in this project, our team developed alternative alignments to minimize impacts to the existing utilities in conjunction with adjacent residential developments. We coordinated utility relocation efforts to ensure they would be incorporated within the project elements. Another project component was bridge design. It included a 10-foot sidewalk on both structures and allowed for ultimate widening to a six-lane section. Aesthetic elements were provided including decorative pedestrian handrails, form liners on columns and bent caps, painted substructure, and stone veneer monuments. with accent lighting. Another key project element was a multi-lane roundabout which is the first in McKinney. We evaluated turning radii, approach and departure geometry, and sweep areas to accommodate cars and trucks. Roundabout Layout sheets were prepared detailing joint layouts, curb offsets, spot elevations, contours, and signing and marking. A concrete truck apron was incorporated into the design with stamped and tinted concrete. The design was completed in 24 months.

TRAVEL FORECASTING, TRAFFIC ANALYSIS, AND ENGINEERING SERVICES, STATEWIDE, MD

This contract involves traffic engineering studies and travel demand forecasting, including development of existing and design year no build and build average daily traffic (ADT) volumes for planning and design projects.

Client Reference:

Maryland State Highway Administration
Lisa Shemer
410-545-5640
LShemer@mdot.maryland.gov
Client is more engaged by email connections.

Most projects involved using the MWCOG, BMC MPO, or MD Statewide Transportation models. Projects involved developer plan and traffic impact analysis reviews, arterial and freeway congestion management studies, IAPA reports (I-495 at MD 97), SHA Objective Statements, roundabout analysis using SIDRA intersection, safety analysis using the Highway Safety Manual including conducting pedestrian road safety audits (PRSA), active traffic management (ATM) strategies including TSMO, support the Highway Access Manual, regional impacts of developments (Westphalia Town Center), mesoscopic DTALite modeling for MD 43, performing capacity analysis using HCS, CLV, Synchro/SimTraffic, multi-hour Vissim computer modeling, signal warrant studies and roundabout analysis, crash analysis and safety studies, and conducting Maintenance of Traffic Alternative Analysis, developing presentations on traffic/safety concerns. Staff have provided on-site support. Supported PEL, NEPA, long-range planning, and feasibility studies.

TRAFFIC ENGINEERING SERVICES, DISTRICT 3 MONTGOMERY AND PRINCE GEORGE'S COUNTIES, MD

JMT delivers traffic engineering studies including traffic signal warrant/multi-way stop analysis, and left-turn phasing; review of development plans and traffic impact analysis for access management; traffic signal timing optimization using Synchro/SimTraffic; roundabout analysis using SIDRA intersection; corridor and intersection analysis; analysis of congested/high crash locations for the SHA Candidate Safety Improvement Program locations (CSIL/CSII) and Intersection Capacity Program (formally Congested Intersection Program) as part of the System Preservation Program; work zone traffic control reviews; and pavement marking/signing reviews. Traffic/pedestrian/bicycle data collection was conducted along with queuing measurements, speed studies, safety, and traffic calming, delay analysis, crash analysis, and capacity analysis. Provide on-site support and use ProjectWise, Microsoft Office, and MicroStation.

JOHN T. HICKERSON WRF DESIGN-BUILD IMPROVEMENTS, TX

The John T. Hickerson Water Reclamation Facility has a total capacity of 17.5 million gallons per day. Critical components of Treatment Train # 1 were due for rehabilitation for a total construction cost of nearly $30 million. The work included the replacement of key treatment infrastructure mechanisms for the headworks, clarifiers, aeration basins, and pumping rooms. The following main improvement tasks were performed while maintaining the plant fully operational:

- Large diameter sewer pipelines.
- Gas pipeline relocation.
- Concrete splitter box.
- Flow meters and vaults.
- Concrete pads.
- Crane system.
- Large cast-in-place concrete boxes.
- Structural rehabilitation.
- SCADA and instrumentation.
- Electrical panels.
- Odor control system.
- HVAC.
- Variable frequency drives pumps and motors.
- Standby power generators

JMT acted as the Owner advisor and was closely involved in this project from the planning phase, conducting tasks such as condition assessment of critical infrastructure before bid phase, performance specifications, construction cost estimates, and the preparation of bridging documents through the progressive design-build model, review of contractors' proposal, provided recommendations for the most qualified design-build contractor. JMT also provided overall project management, management of subconsultants, review of technical specifications, conducted progress meetings, reviewed design, completed earned value analysis, and negotiated guaranteed maximum price with the contractor.

SE LOOP, SCHEMATIC AND PS&E, WILLIAMSON COUNTY, TX

JMT is at the forefront of stormwater management and water resources program development and implementation for drainage, storm, and FEMA flood studies. We pride ourselves on keeping our clients on the "cutting edge" of MS4 compliance, while managing the complexities and risks. Our experience defines our abilities and has provided us with valuable knowledge on what works, what can be streamlined, and what level of effort is just right. Our team provides services for erosion control, storm drainage, and hydraulic modeling while prioritizing design steps towards a final product that avoids, minimizes, and mitigates environmental impacts, maximizing the client's investment.

For the Williamson County SE Loop project, JMT led the highly complex drainage design which included 2 major FEMA crossings, minor culverts, detention, and dam coordination. The schematic design calculated 5.8 miles of the controlled-access facility including main lanes, ramps, frontage roads, and new roadway alignment; the PS&E portion included roadway improvements along the loop's corridor.

The H&H study was highly complex for this project and focused on major FEMA stream crossings, evaluating peak runoff at the outfalls, and comparing it to the new drainage pattern established with the roadway. JMT's team determined detention volumes to mitigate peak runoff back to existing conditions.

At the major FEMA river crossings, alignments were proposed to minimize floodway encroachment and assure no 100-Year water surface elevation increases outside the ROW. The schematic phase incorporated parallel drainage design (ditches and storm sewer trunklines) and subsequent PS&E analysis revealed the drainage patterns could accommodate more crossings, consequently translated into savings towards the ultimate build.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called "CITY" and Kimley-Horn and Associates, Inc., of 1001 West Southern Ave, Ste 131, Mesa, AZ, 85210, hereinafter called "CONTRACTOR".

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment "A") during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY'S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY'S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Kimley-Horn and Associates, Inc. 1001 West Southern Ave, Ste 131 Mesa, AZ 85210 ATTENTION: John Kissinger

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

ATTACHMENT C – COST PROPOSAL FORM RFP 23-24-051 – General Engineering Services
(NOTE: This form shall not to be modified in any way)

Consulting Firm Kimley-Horn and Associates, Inc.

ITEM	DIRECT LABOR / CLASSIFICATION	HOURLY RATE*
1	Principal Engineer	$ 330.00
2	Project Engineer/Project Manager	$ 295.00
3	Senior Engineer	$ 240.00
4	Design Engineer	$ 205.00
5	Engineer Intern	$ 170.00
6	Engineering Technician	$ 150.00
7	Drafting Technician	$ 135.00
8	Survey Crew**	$ N/A
9	Construction Inspector/Observer	$ N/A
10	Administrative/Clerical	$ 130.00
11	Field Testing and Investigations	$ N/A
		PERCENT MARKUP
12	Subcontractor Cost Markup	(%)

ITEM	MATERIALS / REIMBURSABLE EXPENSES	RATE
	Travel	
13	Per Diem (per day) – Pre-Approval Required	City of Las Cruces Rate
14	Vehicle Mileage Rate (per mile)	Current IRS Rate
	Reproduction Services	
15	Black and White Copies (per copy)	$
16	Color Copies (per copy)	$
17	Prints 24x36 (per sheet)	$
18	Mylars 24x36 (per sheet)	$
19	Photo Quality Plots (per plot)	$
	Miscellaneous	
20	Any other costs incurred	Case by Case Basis

**Rates are to include all overhead costs and any and all assessment expenses*

***Survey Crew Rates are to include GPS and Total Station Equipment*

Notes: 1. Detailed man hour Estimates are required for T&M contracts and are to utilize corresponding rates

2. Rates in place at the time a project is contracted with the City will remain for the duration of the contract.

CITY OF LAS CRUCES

PROPOSAL FOR

General Engineering Services

RFP No. 23-24-051

FEBRUARY 27, 2024

PREPARED BY

Kimley»Horn

Expect More. Experience Better.

February 27, 2024

City of Las Cruces
700 North Main
Las Cruces, NM 88001

Kimley-Horn
1001 West Southern Avenue, Suite 131
Mesa, AZ 85210

Re: Proposal for General Engineering Services, RFP No. 23-24-051

Dear Members of the Selection Committee,

The City of Las Cruces (City) is seeking a consultant to perform general engineering services that will support a variety of public needs ranging from roadway plans and right-of-way (ROW) coordination to transportation studies and electrical and utility design. Kimley-Horn is pleased to offer our multidisciplinary engineering and design services, which will enable the design of an array of multifaceted projects throughout the city. We have the relevant experience, quality team, and availability to provide the general engineering tasks associated with this on-call contract. **We are pleased to offer the City the following benefits in partnering with Kimley-Horn:**

Local Knowledge. Kimley-Horn has partnered with the City on several projects recently, providing the City with guidance on signal timing, lighting analysis, and traffic impact analysis projects. We will use our experience in working with City staff to focus on key issues facing the City and we will utilize our existing relationships with City staff to streamline communication and management. **There will be no learning curve at the onset of the contract, and our project team is prepared to hit the ground running.** Additionally, we are familiar with how the City prefers to communicate with its consultants and are well equipped to implement time-tested communication methods and project management approaches that meet the City's desire for in-depth and articulate consulting guidance.

Multidiscipline Planning and Design Services. We have assembled a broad team that offers the City local, technical experts in all of the major design tasks listed in the Request for Proposal (RFP). Our team includes experts in master planning, structural design, roadway/transportation and parking lot design, site development, electrical design, mechanical design, water/wastewater design, traffic planning, street lighting/photometrics, drainage studies and storm drainage, construction management, environmental assessments, and more. **Contract Manager Joel Varner and other key team members offer a proven track record of successfully coordinating stakeholder efforts involving municipalities throughout New Mexico, Arizona, and other surrounding states. With access to our vast network of national talented experts and design partners, we are able to quickly address any need the City has.** With Kimley-Horn, the City of Las Cruces truly has access to a one-stop shop for all general engineering tasks that may be encountered as a part of this on-call contract.

Planning and Design Expertise. Our team has experience in all phases of project development, from planning and conceptual studies to traffic and safety analysis to preliminary design and feasibility reports all the way through final construction documents and construction administration. **We are able to assist the City through the entire life cycle of a project, providing the City with a holistic approach to planning and design that provides consistency throughout the project process.** Regardless of what stage of a project's life cycle the City needs assistance with, the Kimley-Horn team is equipped to address all aspects of operations to best meet the needs of the City.

Kimley-Horn is in receipt of addendum one dated February 20, 2024. We appreciate the opportunity to submit our proposal and look forward to continuing our partnership with the City. We are confident in our qualifications and our ability to successfully deliver on assignments from this on-call. If you have any questions, please contact Joel at 602.906.1188 or at joel.varner@kimley-horn.com.

Sincerely,
KIMLEY-HORN

Joel Varner, P.E.

CITY OF LAS CRUCES

RFP COMPLIANCE DECLARATION

RFP TITLE: **General Engineering Services**

RFP NO.: **23-24-051**

DUE DATE/TIME: **February 27, 2024 / 4:00 p.m.**

In compliance with the requirements of this RFP, I, the undersigned, offer and agree to furnish any or all materials and/or services to the City of Las Cruces within the time agreed.

I further certify that this company has not been debarred, suspended, or otherwise made ineligible for participation in Federal Assistance programs under Executive Order 12549 Debarment and Suspension as described in the Federal Rules and Regulations.

Receipt of Addenda Nos.: 1 is hereby acknowledged (where none received, place a zero in this space)

Company Name and Address:

Kimley-Horn and Associates, Inc.

NM Resident Certificate from NM Tax and Revenue Department enclosed _____ Yes X No

THIS FORM MUST BE COMPLETED AND INCLUDED WITH PROPOSAL
FAILURE TO INCLUDE WILL SUBJECT RESPONSE TO REJECTION

Evaluation Criteria No. 1: Technical Approach

A. Technical Approach

Civil engineering has been a cornerstone of Kimley-Horn's practice since our founding in 1967. We have knowledgeable professionals who are able to address every aspect of the needs of the City of Las Cruces (City) associated with general engineering, and other related fields that rely on these civil-related topics such as roadway and transportation. Kimley-Horn's professionals have successfully completed a wide range of projects for state, regional, and local agencies. **Our engineers will provide the City with various professional, technical, and customary services as they relate to the on-call tasks assigned by the City, including safety considerations and evaluations, roadway and congestion management, drainage, utilities, and more.** We do not just work to find solutions to the task we are selected to complete, but provide additional value to the project by thinking ahead to anticipate how given solutions will affect other aspects of the project. We work to get these items incorporated into the task schedule as needed, and we make it a priority to keep up-to-date on innovative and emerging technologies and methods and think outside the box to find creative solutions to tasks.

Assigning the Right Project Team

A big part of our approach to this General Engineering Services On-Call is assigning the right team for each project. The key is making sure that when you contact us that we provide the team that can serve you best. For example, if the project is highly specialized such as a structural forensics opportunity where there is structural building damage caused by stormwater flooding, the City needs a forensics specialist rather than a structural engineer whose career has been focused on primarily bridge and retaining wall design. Likewise, the City needs a team that has the capacity to effectively lead a given project and provide the City with exceptional service. Our proposed contract manager, Joel Varner, has managed similar civil engineering on-calls across the Valley over his 14-plus-year career, and knows the importance of matching the right team for each project. He has a strong understanding of the individual strengths of our proposed team members as well as other support staff at Kimley-Horn. Joel is also familiar with individual and team workload situations to ensure that the team assigned has the available capacity to serve the City effectively. When approached by the City with an on-call task, Joel will connect the right point of contact that is proficient, available, and cost effective based on the nature of the task.

B. Major Tasks to be Accomplished

Our team has served as on-call consultants for many municipalities over the years and we have developed an approach to making every task a successful one.

Our major tasks and goals for this contract include the following:

Being Flexible. We know that having a flexible approach is a critical need during on-call contracts. Our project team understands how to navigate changes to the project schedule, scope, budget, and other various unforeseen circumstances. Our team is knowledgeable and available to offer our consulting services if and when these changes arise.

Thinking and Acting as an Extension of the City's Staff. Our team will approach the City's projects as though we are part of your staff. We want to operate as one efficient unit, prioritizing your overall vision and goals. We anticipate acting in concert with the Las Cruces community and working to minimize constraints to the City's objectives.

Thinking Big Picture. We will look beyond the project, asking ourselves: *What is the ultimate goal?* We will help the City identify and procure outside funding whenever possible.

Being Creative. We will look for creative and innovative solutions and present them to the City throughout the projects that come out as part of this on-call contract. *One example of this includes when Kimley-Horn was tasked by the City to complete a signal timing and phasing evaluation at the closely-spaced intersections of Spitz Street/Three Crosses Avenue and Main Street/ Solano Drive. Our team found that without clustering the intersections together, the City could instead utilize fixed timing to accomplish the same result and be more flexible. This allowed the City to customize the signal splits while maintaining coordination between the two intersections. Kimley-Horn also provided additional recommendations at these locations to improve operations, including double-servicing a left turn and changing the phase order.*

Providing Community and Council Support. Outreach to the community can be as important as the design of a project. We can prepare all exhibits and media, present information to the community or council, or simply provide support for the City. Our public involvement team

is versed in community outreach and will work with the City to reach consensus among all stakeholders involved.

Communicate Continuously and Effectively. We continuously keep the City's Project Manager and major stakeholder abreast of all project-related activities. The City needs a consultant who is responsive and proactively communicates the status of tasks to keep the City informed. We also understand the importance of communicating with the City when potential changes arise that may impact the project budget or schedule, that way a mutually agreed-upon solution can be reached in a timely fashion.

Produce Quality Deliverables. Our team is committed first and foremost to delivering high-quality deliverables void of errors and omissions. Between pre-submittal quality control reviews through tracking major action items and providing detailed responses to the City's comments, we strive to create a quality experience for our clients.

C. Statement of Services

With this general engineering services on-call contract, it is essential that the City identifies a consultant who can provide a broad range of planning, design, and construction engineering services, a team of strong, experienced staff who are leaders in their design disciplines who can be trusted to deliver on very specific types of services, such as a airport design support, transportation planning, or modifying a FLO-2D model, a consultant with the resources and capabilities to deliver on high-profile and fast-paced projects for the City. Kimley-Horn's national network of experts and strong local presence make it an ideal selection for this contract. **Our team is pleased to offer the City the following services and expertise in the following disciplines, all of which are provided by our in-house team of engineers and planners.**

Master Planning

Kimley-Horn has been serving both public and private clients for their master planning, land use, and development projects for decades. We work with cities and counties on projects like fire stations, parks, court houses, and municipal buildings. We work with schools like Washington K-12 district in Phoenix, Maricopa Community Colleges, and Arizona State University (ASU), and many others. In healthcare we work with the Phoenix Veterans Hospital, and many small medical facilities, and we handle everything outside the buildings on the Mayo campuses.

We also work on many small national client and private land development projects like office parks, multi- and single-family residential, and retail. Our Phoenix office has the following disciplines all in-house under one roof:

- Landscape architecture
- Land planning
- Civil engineering
- Structural engineering
- Traffic impact analysis and studies engineering
- Stormwater quality and quantity engineering
- Environmental services
- Geographic Information System (GIS) planning
- Electrical engineering

Having this complete group of disciplines all together reduces the risk of design conflicts and schedule slippage, and allows us to provide solutions that are holistic to everything that involves the area outside the building. We know what it takes to build consensus on designs that are permittable and constructible.

Structural Design

Structural engineering is often integral to full-service civil engineering, and our structural engineers are experienced in bridge design, vertical structures design, industrial facilities planning, stormwater and water management structures, and design of municipal facilities and transportation-related structures. Our structural experience with steel beam and girder structures, post-tensioned box girders, and precast and conventional reinforced concrete, enables us to readily address your needs, schedule, and budget. Kimley-Horn offers you expertise in design, construction inspection, and evaluation of buildings, parking facilities, water control structures, bridges, signing and signal structures, and roadway structures.

Roadway, Transportation, and Parking Lot Design

The design of transportation facilities is foundational to what we do at Kimley-Horn. Since our inception, we have built a national reputation for delivering exceptional solutions to clients across various sectors, including public agencies, private developers, and transportation authorities. Our team of talented professionals brings a wealth of experience and expertise in transportation engineering, urban planning, and design. Over the years, we have successfully completed the design for thousands of miles of roadway projects, ranging from small-scale roadway improvements to large-scale transportation infrastructure

developments through every phase of the planning, preliminary design, and final design process. Our team has experience delivering conceptual alignment studies, conducting traffic and safety analyses, preparing project assessments (PAs) and design concept reports (DCRs), and construction documents. We have experience working with the Federal Highway Administration (FHWA) and understand the steps involved with federal processes and guidelines.

Kimley-Horn also offers a complete range of parking design and consultation services—from planning and feasibility studies to facility design, maintenance and restoration, and revenue/access control. Parking-related services represent a major part of our transportation-based practice. With more than 100 dedicated parking professionals across the country focused on four key parking components—strategic planning and management, design and construction, technology, and maintenance and restoration—our firm has provided parking services on more than 200 parking structures (150,000+ spaces) across the country in the last 15 years.

Site Development

Kimley-Horn's dedicated development services staff have participated with many local municipal clients since our founding. Typically, our work is related to plan checks for new developments within a municipality. Our staff has provided, and is currently providing, such services as checking plans to verify compliance with local agency standards; providing tracking of revised plans and status of plans in the plan check process; supporting developers and their engineers in their efforts to get plan approvals per agency standards; and general support to county and city engineering and public works staff. Our team of development services engineers can work as an extension of City staff to assist with development plan reviews, permit compliance reviews, development coordinaton, or even to help with master planning efforts. We are also well versed with public presentations, public coordination, and can assist with presenting to City Council as necessary to assist with communicating planned developments.

Electrical Design

Kimley-Horn's electrical engineering team has extensive experience in power and instrumentation design of new and existing water and wastewater facilities ranging from treatment facilities, lift stations, booster pump stations, and well sites. Our practice encompasses the design of control panels, ladder logic diagrams, power distribution and backup power, load summary and analysis, Piping and Instrumentation Diagram (P&ID) diagrams, Supervisory Control and Data Acquisition (SCADA) design plans, and backbone communications design for both exterior and interior projects. Our electrical team will create comprehensive designs keeping the customer in mind, while also conforming to all applicable codes and the City's design standards for seamless permitting and construction processes.

Mechanical and HVAC

Our mechanical engineering team is focused on designing energy-efficient and cost-effective systems for buildings ranging from manufacturing facilities, vehicle maintenance facilities, medical office buildings, lift stations, to multi-family residences. Our team is versed in the design of central plants, packaged air handling units, domestic water piping, sanitary waste and vent systems, natural gas, and other compressed gas systems. With the use of Revit, the mechanical team looks to design systems that not only satisfy the building code requirements, but provide systems that facilities staff will be able to maintain well of the entire life cycle of the building.

Water/Wastewater Design

Kimley-Horn brings a complete understanding of water/wastewater, and reclaimed water systems from the initial needs analysis and master planning to detailed design, construction phase services, and condition assessments. We have municipal experience in design and construction of a wide variety of projects, including planning and design of transmission and distribution pipelines; trenchless technology designs; right-of-way and easement coordination; utility coordination; pipeline rehabilitation; water/wastewater treatment facilities design; tanks and boosters design; lift station evaluation and design; flow monitoring; site security; and permitting. Many of our professionals are locally and nationally recognized in the field of lift stations, water/wastewater treatment membrane technology, and security management systems such as closed-circuit television (CCTV) surveillance, detection systems, field controllers, communications systems, and central control and monitoring.

Traffic Impact Studies and Transportation Modeling Studies

Kimley-Horn is a leading consultant in developing transportation plans, transportation/traffic modeling studies, corridor studies, operational studies, parking studies, bicycle and pedestrian plans, safety analyses, freight plans, general plans, and transportation impact studies. We have assisted

many local and state agencies in securing federal funding and developing transportation plans and programs for both short-term and long-range improvements. With expertise in conditions assessment, demand forecasting, environmental review, alternatives assessment, and cost-benefits analysis, Kimley-Horn has the experience to progress a project from the inception of a concept through the development and implementation of a plan.

Kimley-Horn also provides transit planning and engineering services throughout the U.S. From the largest regional agencies to small systems, Kimley-Horn's transit experts guide our clients through all phases of a project, from the early planning stages through final design and construction administration. For rural, urban, regional, and statewide transit systems, we provide comprehensive analysis, planning and design services, short- and long-term transportation plans, major investment studies, route planning, alternatives analysis, line-by-line analyses, on-board surveys, demand modeling, and environmental documentation. **Our team understands that all facets of the transportation system—streets, transit, bicycling, and walking—must work together to build vibrant, sustainable communities.**

Photometrics and Street Lighting Design

Kimley-Horn's electrical engineering team is well versed in providing detailed photometrics analysis and street lighting design for nearly all of our civil projects. Our experience includes designing and analyzing lighting for roadways, development sites, parking lots and structures, parks, pathways, sporting facilities, airport runways, and more. Our team regularly deals with electrical and lighting design considerations, including determining power requirements, utility coordination, stakeholder involvement, Leadership in Energy and Environmental Design (LEED) and conservation requirements, and investigating existing systems and their life expectancy. We are also familiar with the National Electric Code (NEC), Energy Conservation Codes, and LEED commissioning, and we bring that expertise to the project team. Many requirements govern the installation of electrical systems and we will incorporate those requirements into our designs. Our team is thoroughly experienced in all electrical engineering considerations that may be included in this on-call contract.

Drainage Studies, FEMA Flood Studies, and Storm Drainage

Kimley-Horn's surface water and drainage experience encompasses everything from traditional hydrologic/hydraulic analyses and design of storm drainage systems, culverts, and bridges to holistic urban watershed-based solutions that address flood control, water quality, aesthetics, and mitigation needs. Our team of experts have successfully completed projects nationally and across the Southwest, and we thoroughly understand arid region flood mitigation. Our surface water specific services include master planning, flood control design, hydrology and hydraulic analyses, complex two-dimensional modeling, Federal Emergency Management Agency (FEMA) permitting, floodplain mapping, and public involvement.

Kimley-Horn's expertise in these categories goes above and beyond in storm drain design and complex watershed master planning. Our storm drain design experience ranges from small systems to large flood control facilities. We have recently completed projects with storm drain up to 120" in diameter. We understand that the typical critical path for most storm drain design projects in utility identification, coordination, and relocation. Kimley-Horn has developed a scalable approach to minimize utility coordination and relocation delays as much as feasible to avoid project disruptions.

From a master planning perspective, Kimley-Horn has developed an approach for large and small watersheds that utilizes detailed 2D H&H (FLO-2D or HEC-RAS 2D) to initially identify hazards. We then engage the public and stakeholders with a robust outreach program to "ground truth" results. From there, we formulate conceptual alternatives that are implementable based on funding constraints and grant opportunities. This approach has worked well in securing grants and funding actual construction projects with attractive cost share programs for the local agency.

Environmental Surveys, Planning and Analysis

Our team, consisting of National Environmental Policy Act (NEPA) planners, biologists, environmental scientists, GIS specialists, and hazardous materials remediation specialists is structured to meet each task that could be involved in this contract. In addition, as a national firm, backed by over 7,400 employees in more than 120 offices around the country, we have the ability to meet the personnel needs of this contract. Environmental services provided include:

- Section 404/401 Permitting
- Preliminary Jurisdictional Delineations (PJDs), Approved Jurisdictional Delineations (AJDs), as well as individual and general (regional and nationwide) permit applications
- Biological Evaluations

- Habitat analysis, threatened and endangered species evaluations, and designing and conducting species-specific surveys
- Hazardous Materials Assessments
- Preliminary Initial Site Assessments (PISAs) and Phase I/II Environmental Site Assessments (ESAs)
- Section 4(f)/6(f) resources, environmental justice/ Title VI, prime and unique farmland, visual resources, floodplains, and sole source aquifers analysis
- GIS analysis
- NEPA Documentation
- Categorical Exclusions (CEs), Environmental Assessments (EAs), and Environmental Impact Statements (EIS)s

Any historical/archaeological/cultural resource assessments tasks will be completed by a qualified subconsultant.

Expert Witness

Kimley-Horn's forensic engineers and specialists apply accepted scientific and engineering principles to collect evidence and conduct the analysis to understand your case. Our licensed professional engineers are experts in evaluating claims related to property, buildings and/or building systems, vehicle crashes, premise liability, workplace accidents, fire causation, product failure, construction defects, structural failures, storm damage, and more.

Our advantage is in our experts' experience and understanding of the best strategy for the use of expert testimony coupled with the state-of-the-art engineering analysis. Our experts have the ability to provide clear answers in an efficient, timely manner, and to provide expert testimony when necessary. We have experts in mechanical engineering, civil engineering, and biomedical engineering providing analysis accepted in circuit and federal courts.

Insurance professionals and attorneys nationwide call on Kimley-Horn's experts with many years of practical experience, education, and specialized training. Kimley-Horn has more than 120 offices across the U.S. allowing our experts to draw on nationwide resources resulting in exceptional services. In addition, our experts are capable and experienced in providing vast technical data in a way that a jury can understand.

Project Management

Kimley-Horn's project management begins with a complete and thorough understanding of the project, including communication/coordination, assigned scope, schedule, budget, and quality control requirements. Effectively managing these functions throughout the development of projects is paramount and we consistently:

- Take ownership of task orders
- Conduct productive meetings
- Employ effective communication with project team and stakeholders
- Identify issues and resolutions early
- Provide alternatives/options and recommendations
- Determine action items and make decisions
- Monitor project budget and schedule
- Respond quickly to design and construction requests
- Build QC into every task

Public Participation and Involvement

Kimley-Horn is sensitive to the role of meaningful public involvement programs that enable area residents to establish their priorities. Public involvement determines the overall design program, funding strategies, and implementation priorities. Our expertise in providing a broad range of services helps to ensure the successful implementation of your goals while addressing the specific challenges that each project entails. Kimley-Horn is known for developing innovative project approaches that involve neighborhood and community participation. We understand that some projects require community involvement and acceptance, and we have developed effective methods of bringing the community into the process. **Kimley-Horn is strongly committed to conducting public involvement programs that educate, inform, and build consensus for a particular solution. Each project is different in terms of the stakeholders and the critical issues involved; thus each public involvement program must be tailored to specifically address the project's needs.**

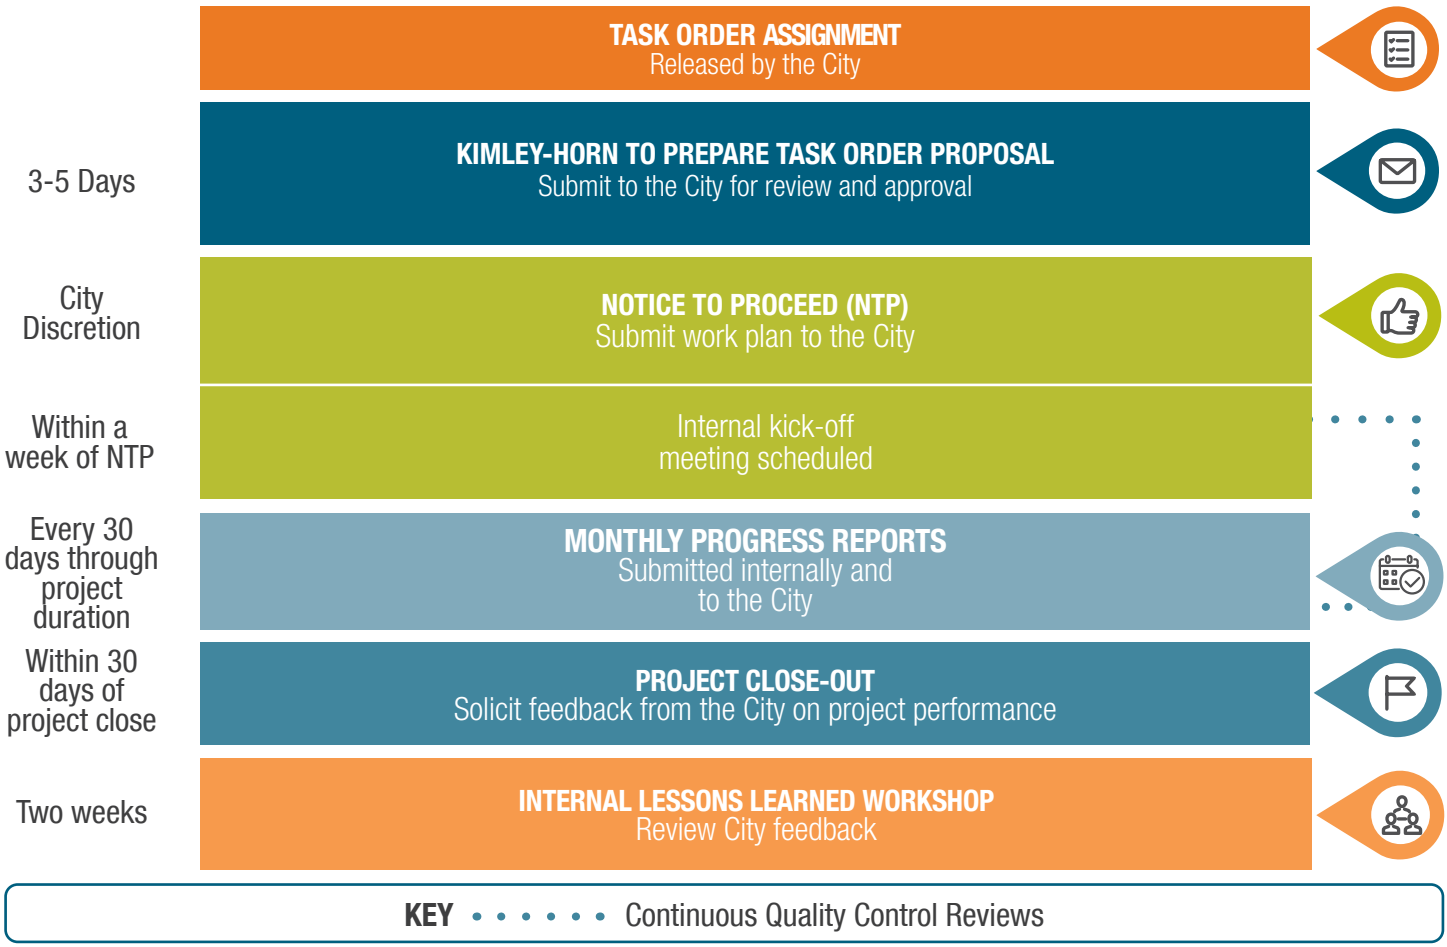
D. Project Schedule

Meeting project schedules is beneficial to both the City and critical stakeholders. Our team recognizes that control of the schedule is vital to the success of any project that may arise during the contract. Through communication with City staff, our team will work to create and define project requirements, recognize potential obstacles to success, identify possible opportunities to achieve additional value within the identified budget, and create a project work plan that allows us to accomplish the City's goals. We recognize that meeting schedule demands allows stakeholders to feel that their approval of the funding was a wise investment. Kimley-Horn has developed a process that ensures our team works in concert with the City to maintain a comprehensive schedule approach to on-call task orders. We include City staff in critical decision-making points so the project team and City staff can agree upon the best course of action to keep the project on track at all times.

Due to our access to Kimley-Horn's large network of experts, we can address sudden requests on a moment's notice. Because City staff may get short-notice requests, often requiring immediate attention, we can provide the City with fast response times and the necessary resources to respond to these often unanticipated and political projects. This may include providing the City with exhibits or cost comparisons within hours to satisfy the request. Establishing internal project schedule deadlines is a successful technique to track schedule progress and provides an opportunity to use additional resources, if necessary, to deliver the project on time. We will develop an internal submittal schedule for the project team that begins typically one to two weeks before the City's submittal deadlines. This internal schedule includes milestone deadlines such as internal independent Quality Assurance/Quality Control (QA/QC) reviews, distribution of QA/QC comments to the project team, and final edits to construction documents.

The graphic below details our typical approach to on-call task orders.

Figure 1: Task Order Approach



Evaluation Criteria No. 2: Qualifications and Competence

A. Key Personnel Qualifications

Our project team has been thoughtfully assembled to address all major design needs of this general engineering services on-call contract. As you review, please note that each team member provides technical expertise directly related to one of the major technical scope of work items identified in the RFP, and we are able to address all major design elements of this on-call contact with our in-house team of planners and engineers.

Below is our organizational chart, which details our project team and identifies key personnel and relationships among team members. This is followed by team bios with a description of experience, areas of competence, and a percent of time assigned to the project for our key personnel.

Figure 2: Organizational Chart

Professional Credentials: **Professional Engineer in NM (Pending)**, AZ

Joel offers 14 years of experience in transportation and civil engineering. His main area of expertise is in municipal roadway projects, where he has experience managing multidiscipline designs and coordinating the geometric, structural, drainage, and traffic components of complex transportation projects. Joel contributes considerable design knowledge and strong software skills, and his previous responsibilities have included roadway geometry and Americans with Disabilities Act (ADA) design; pavement marking and striping layouts; preparation of final plans, specifications, and cost estimates; utility coordination; grading and drainage; and earthwork modeling. **As your Contract Manager, Joel will serve as the main point of contact for the City.**

Relevant Experience

- City of Phoenix, Engineering On-Call Services, Phoenix, AZ
- City of Goodyear, On-Call Services, Goodyear, AZ
- City of Glendale, On-Call Roadway Services, Glendale, AZ
- Coconino County, On-Call Engineering Services, AZ

John Kissinger, P.E., PTOE // Principal-in-Charge/ Expert Witness

37 Years of Experience
27 Years with Kimley-Horn
Professional Credentials: **Professional Engineer in NM (#25907)**, AZ, CA, ID, IL, IN, IA, KS, MN, MO, MT, NE, NV, OH, UT, WA, and WI; Professional Traffic Operations Engineer (PTOE)

John has 37 years of consulting experience designing roadway, traffic, and Intelligent Transportation Systems (ITS) projects. John's experience includes leading projects from the initial planning and feasibility study stages through final design and construction. He also is experienced in the public involvement process including city council and large group presentations, facilitation of open house meetings, and leading small group and one-on-one meetings. **As your Principal-in-Charge, John will provide general oversight of the project to see that your needs are being met and that you receive a high level of service. He is also available to serve as an Expert Witness, if needed.**

Relevant Experience

- City of Las Cruces, Signal Timing at North Main and Solano, Las Cruces, NM
- City of Las Cruces, Signal Timing at Missouri and Triviz, Las Cruces, NM

Chris Woolery, P.E. // QA/QC Manager

30 Years of Experience
12 Years with Kimley-Horn
Professional Credentials: Professional Engineer in AZ

Chris has 30 years of extensive experience in project management, engineering design, and construction. He has been responsible for the roadway design and utility coordination for numerous public projects throughout Arizona and surrounding states. His responsibilities have included the preparation of final design plans, specifications, and cost estimates; roadway design; grading and drainage design; water and sewer design; utility conflict identification and relocation; preparation of DCRs and PAs; coordination with city, county, and state agencies; and attendance at public meetings. **As your QA/QC Manager, Chris will be responsible for monitoring the quality of our performance on this contract.**

Relevant Experience

- City of Tucson, On-Call Traffic Engineering Services, Tucson, AZ
- City of Chandler, On-Call Civil Engineering Services, Chandler, AZ

Keith Nichter // Master Planning

20 Years of Experience
6 Years with Kimley-Horn

Keith brings over 13 years of local land planning, entitlement and development experience throughout the Southwest and is well known for his commitment to exceptional client service and dedication to delivering quality projects. With a diverse background delivering both private and public projects, Keith's relationships and expertise, combined with Kimley-Horn's depth of resources, provide an unmatched approach to full-service consulting.

Relevant Experience

- Pinnacle Land Development, LLC, Brody Square, Phoenix, AZ
- KB Homes, Cherry Gove Utilities, Boise, ID

Dave Haines, P.E., PSNP // Electrical Design/SCADA Design

31 Years of Experience
29 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (#15988)**, AZ, CA, ID, KS, MI, MO, NE, NV, OR, TX, UT, and VA

Dave specializes in wide-area communications architecture design, communication equipment and ITS equipment technology assessments, fiber optic network design, local area network design, power distribution design, and roadway, intersection, parking, and lighting designs. He is experienced in software functionality writing, specification writing, plans package production, constructability evaluations, communication hardware integration, performing voltage drop and conduit percent fill calculations, performing illumination calculations, troubleshooting and repair of communication equipment, and construction support for fiber optic network installations.

Relevant Experience

- City of Las Cruces, Technical Support for Fiber Optic Network Architecture, Las Cruces, NM
- Arizona Department of Transportation (ADOT), Statewide Traffic On-Call, Statewide, AZ
- ADOT, Apache Junction ITS Strategic Plan, Statewide, AZ

Jeffrey Smith, P.E. // Mechanical/Plumbing/HVAC

10 Years of Experience
3 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (#27374)**, AZ, AL, AR, CA, FL, ID, KY, LA, MS, TN, TX, UT, and WA

Jeff has 10 years of experience in mechanical, plumbing, and energy engineering providing services from conceptual design, through construction for projects ranging from renovations to new construction on large commercial, tenant improvement, city, higher education, and healthcare projects. Jeff's experience includes designing heating, ventilation, and air conditioning (HVAC) and plumbing system designs as required to produce permit and construction drawings. His responsibilities include but are not limited to, determining and specifying HVAC and plumbing systems and performing a cost-benefit analysis, heat load calculations for building load and system calculations for indoor heating and cooling systems, and pressure loss calculations for piping and air duct systems.

Relevant Experience

- City of Mesa, On-Call Mechanical Engineering Services, Mesa, AZ
- City of Coolidge, On-Call Mechanical Services, Coolidge, AZ

Ben Henderson, P.E., S.E. // Parking Lot Design

19 Years of Experience
17 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ, CO, IN, IA, MI, MN, MT, NE, NJ, TX, WI - P.S.E. in AZ, IL, NV, UT, WA

Ben has 19 years of structural engineering experience designing and supporting the construction of a broad range of structure types for developers, private clients, airports, transit facilities, DOTs, municipalities, and universities. Some of the structure types that Ben has designed include low-rise buildings, parking structures, pedestrian and vehicular bridges, boardwalks, foundation systems, canopies, box culverts, retaining walls, sign and signal structures, and other miscellaneous structures. In addition to his experience with the design and construction of new structures, Ben specializes in structural rehabilitation, remediation, and durable structural design that provides his clients additional assurance of projects with lower life cycle costs and desired design life.

Relevant Experience

- Capital City Development Corporation, On-Call Parking and Mobility Services, Boise, ID
- Pima County Community College, On-Call Structural Services, Pima County, AZ

Ray Montoya, P.E. // Water/Wastewater

26 Years of Experience
8 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (#20889)**, AZ, HI, NV, and UT

Ray has 26 years of experience in the water/wastewater industry. He has prepared water and sanitary sewer improvement plans, water and sewer hydraulic computer models, master water and sewer studies, and water reuse system plans. His experience includes a wide range of projects in the water/wastewater industry including pipelines, pump stations, pressure-reducing stations, and various preliminary and detailed design reports. He has experience in pipeline and utility design utilizing alternative construction methods, including pipe bursting, slip lining, micro-tunneling, and directional drilling.

Relevant Experience

- City of Tucson, On-Call Transmission Mains, Tucson, AZ
- City of Las Vegas, Wastewater Treatment On-Call Services, Las Vegas, NV

Keith Christian, P.E. // Traffic/Impact Studies and Transportation Modeling

11 Years of Experience
11 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (#27998)**, AZ, and ID

Keith offers 11 years of experience having worked on a wide variety of traffic engineering, planning, and traffic systems design projects for public and private agencies. His projects involved obtaining and analyzing traffic data, creating macro and microsimulation traffic models, optimizing signal timings, assisting agencies with implementation and fine tuning, and providing recommendations and a final report. Keith's experience also includes transportation performance measures, traffic forecasting/analysis, and multimodal transportation planning/engineering.

Relevant Experience

- City of Las Cruces, Lohman Avenue Retiming Phases 1 and 2, Las Cruces, NM
- City of Las Cruces, Traffic On-Call Services, Las Cruces, NM

Michael Colombo, P.E. // Photometrics/ Street Lighting Design

20 Years of Experience
19 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ, CA, and IL

Michael has 20 years of experience specializing in electrical power distribution, lighting, security, and communications. His experience includes performing photometric lighting calculations, electrical load calculations, outside plant conduit and conductor infrastructure, and specification writing. He has participated in the design of park lighting, pedestrian pathway lighting, and roadway lighting for freeway and arterial streets, as well as the design of power distribution systems for various types of infrastructure improvements.

Relevant Experience

- City of Scottsdale, Electrical On-Call Services, Scottsdale, AZ
- City of Mesa, On-Call Electrical Engineering Services, Mesa, AZ

Geoff Brownell, P.E., CFM // Drainage/FEMA Studies/ Storm Drainage

25 Years of Experience
5 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ, CA, and NV, Certified Floodplain Manager (# 02-00581)

Geoff will call upon his 25 years of experience in drainage design, flood hazard analyses, and flood hazard mitigation. Geoff has served on numerous large and small drainage and floodplain studies, ranging from small storm drain improvements to large-scale master plans. He has led many projects developing one- and two-dimensional hydrology and hydraulic models for river systems, local and regional watersheds, and land development. As a former FEMA contractor, Geoff is also an expert in large floodplain mapping studies, map revisions, and the Conditional Letter of Map Revision (CLOMR)/Letter of Map Revision (LOMR) process.

Relevant Experience

- City of Goodyear, On-Call Plan Review, Goodyear, AZ
- City of Scottsdale, On-Call Stormwater Services, Scottsdale, AZ

Jennifer Simpkins, REP // Environmental Survey and Assessments

23 Years of Experience
23 Years with Kimley-Horn

Professional Credentials: Reg Environmental Professional (REP)

As a Senior Environmental Scientist, Jennifer has 23 years of experience in managing environmental regulatory compliance issues for both the private and public sectors. She is experienced in preparing biological evaluations including habitat analysis, threatened and endangered species evaluations, and designing and conducting species-specific surveys. She is also well versed in Section 404 permitting with extensive experience preparing PJDs, AJDs, as well as individual and general (regional and nationwide) permit applications. Jennifer has experience in conducting PISAs and ESAs. Her NEPA experience includes CEs, EAs, and EISs.

Relevant Experience

- City of Phoenix, Natural and Cultural Resources On-Call, Phoenix, AZ
- ADOT, Environmental On-Call Services, Statewide, AZ

Russell Cameron, PMP // Subsurface Utility Exploration (SUE)

21 Years of Experience
1 Year with Kimley-Horn

Russell is a construction and project management professional with 21 years of experience combining operational management, business development, and customer service expertise to maintain cost control levels while providing exceptional service in competitive domestic and international business markets. His expertise is with SUE, particularly focusing on utility designating, utility potholes, and utility relocation for all types of design projects pertaining to roadway, drainage, and new-build designs.

Relevant Experience

- City of Mesa, SUE On-Call Services, Mesa, AZ

Chad Huber, PLS // Survey and ROW Services

30 Years of Experience
2 Years with Kimley-Horn

Professional Credentials:
Professional Land Surveyor in AZ, CO, and NV

Chad is a professional registered land surveyor with 30 years of experience working on projects in the public, private, site civil, and energy sectors. His experience includes boundary surveys, American Land Title Association (ALTA)/National Society of Professional Surveyors (NSPS) surveys, right-of-way (ROW) plans, and drafting. Chad provides oversight on all survey projects including the research, analysis, design, and documentation of survey results. His responsibilities also included cost estimates, project budgets, construction calculations, field notes, oversight of survey staff, and business development.

Relevant Experience

- Arizona State Land Department On-Call ALTA Land Surveying Services, AZ
- Town of Paradise Valley, Mockingbird Lane Final Design, Paradise Valley, AZ

Kim Carroll, P.E., PTOE // Project Management

31 Years of Experience
10 Years with Kimley-Horn

Professional Credentials: Professional Engineer in AZ, LA, and UT; Professional Traffic Operations Engineer

Kim has 30 years of civil engineering design experience. She brings a wide variety of experience including roadway/intersection design, transportation planning, traffic studies, pedestrian/bicycle path design, ADA ramp evaluation and design, traffic signal operations, traffic signal design, pavement marking and signing design, and construction phasing. She has overseen and delivered federally funded projects, including utility relocation and clearances, right-of-way clearances, environmental clearances, and material clearances. She has experience working on design-bid-build, job order contracting, design-build, and construction manager at risk delivery methods.

Relevant Experience

- Town of Prescott, On-Call Traffic Engineering Services, Prescott, AZ
- City of Chandler, On-Call Transportation Services, Chandler, AZ

Nathan Merrill, P.E. // Structural Design

13 Years of Experience
9 Years with Kimley-Horn

Professional Credentials: **Professional Engineer in NM (#26293)**, AZ, CO, and NV

Nathan has 13 years of experience in structural engineering design, construction, inspection, and plan development of various government and private-sector structures and bridges. His bridge design experience includes reinforced concrete, precast/pre-stressed concrete, steel girder, and various pedestrian bridges, as well as concrete and steel superstructure rehabilitation and replacements.

Relevant Experience

- ADOT, On-Call Bridge Scoping Services, Statewide, AZ
- City of Buckeye, Structural On-Call Services, Buckeye, AZ

Joe Cuffari, CFM // Public Involvement

13 Years of Experience
1 Year with Kimley-Horn

Professional Credentials: Certified Floodplain Manager (CFM)

With 13 years of expertise in construction, architecture, and engineering projects, Joe is a highly experienced public involvement coordinator with a proven track record in coordinating public engagement activities for a local government agency. His extensive background encompasses strategic outreach planning, development of collateral and mailings, stakeholder coordination, public messaging, and serving as a point of contact for constituents. He demonstrates a genuine willingness to listen to the concerns of impacted residents and effectively collaborates with project managers to identify agreeable and beneficial solutions, ensuring project success.

Relevant Experience

- City of Tucson, Bilby Road Modernization, Tucson, AZ
- Santa Cruz County, Patagonia Flood Mitigation, Santa Cruz, AZ

Our team prides itself on its ability to be highly responsive and readily available to meet the needs of our clients. We understand the importance of timely communication and are committed to providing quick and efficient responses to inquiries and requests. Whether it is addressing a concern, providing updates on a project, or offering guidance, our team is dedicated to being accessible and responsive at all times. We prioritize clear and concise communication, ensuring that our clients receive the information they need in a timely manner.

Additionally, we embrace collaboration and growth, always striving to enhance our knowledge and skills to better serve our clients. While we value a light-hearted and positive approach, we never compromise on the accuracy and value of our responses. If there is ever a question or situation where we do not have an immediate answer, we will openly communicate this and work diligently to find the information needed.

Overall, our team's ability to be responsive and available stems from our commitment to exceptional client service and creating an environment where our people can flourish.

B. Contact Information and Roles for Firms Responsible for Contract Administration

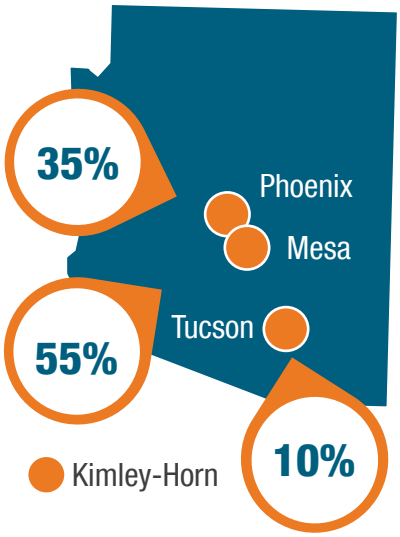
Kimley-Horn's contact information and areas of responsibility are shown below. Hiring subconsultants on an as-needed basis is one of Kimley-Horn's strategic approaches. This flexible model allows us to bring in specialized professionals on a project-by-project basis, tailoring our team to meet specific client needs.

Firm Name and Principal Member/Address	Areas of Responsibility
Kimley-Horn **Contract Manager:** Joel Varner, P.E. **Phone:** 602.906.1188 1001 West Southern Avenue, Suite 131, Mesa, AZ 85210 **Principal-in-Charge:** John Kissinger, P.E., PTOE **Phone:** 602.944.5500 7740 North 16th Street, Suite 300, Phoenix, AZ 85020	**Planning and Design for:** Master Planning, Structural Design, Roadway, Transportation, and Parking Lot Design, Site Development, Electrical Design, Mechanical Design, Water/Wastewater, Traffic Impact Studies, Photometrics/Street Lighting Design, Drainage Studies, FEMA Flood Studies, Storm Drainage, SUE, Survey and ROW, Plumbing and HVAC, Environmental, Project Management **Additional:** Expert Witness, Public Involvement

"We have no reason to exist except to serve our clients"
Ed Vick, President, Kimley-Horn and Associates, Inc. 1972-1992

C. Location and Percentage of Work to Be Performed

The Kimley-Horn Mesa and Phoenix offices in Arizona will perform the majority of work for this contract. **Below, we have included a graphic to represent the percentage of work to be performed at each office location, which is based off of where team members sit and operate.**



D. New Mexico Registration

John Kissinger, P.E., PTOE is a Professional Engineer in New Mexico (#25907). He will be responsible for and in direct charge of the work taking place for this on-call contract.

As Contract Manager, Joel Varner, P.E. has demonstrated the knowledge and skills in the field of engineering and is actively working towards obtaining licensure in the state of New Mexico in addition to his currently active licensure in the state of Arizona. While his license is pending, he is still able to practice engineering under the supervision of John Kissinger, a licensed professional in New Mexico.

Other team members are registered in New Mexico, as identified in the Team Bio's section on pages 8-12.

Kimley-Horn has previously executed multiple agreements with the City of Las Cruces. We are confident that we will be able to reach mutually agreeable terms and conditions. We kindly request the City consider the following minor modifications:

- RFP, Page 10, F. Insurance Requirements, 1. Professional Liability: Professional Liability insurance is per claim, not occurrence.
- RFP, Page 10, 7.: Kimley-Horn cannot name the City as additional insured on workers' compensation and professional liability insurance.
- Professional Services Agreement, page 5, 18. Indemnity and Limitation: Strike "in whole or in part" all three times it appears in lines 3-4 and replace with "solely" as we have done in previously executed contracts with the City.

Evaluation Criteria No. 3: Performance of the Firm

Similar Experience

Kimley-Horn has successfully delivered on hundreds of general engineering projects nationwide. **Below, we have included some of our most relevant experience accompanied by the client contact person for each project.**

City of Tempe, Kyrene Road/Roosevelt Street/Farmer Avenue Bicycle and Pedestrian Improvements // Tempe, AZ

Kimley-Horn was selected by the City as the prime consultant for providing preliminary design services for this bicycle and pedestrian improvement project. The overall goal of this project is to transform an approximate 3.5-mile corridor into a signature BIKEiT Boulevard route for better multimodal connectivity. Improvements focused on providing a low-stress, multimodal route between Baseline Road and University Drive along Kyrene Road, Roosevelt Street, and Farmer Avenue. Project improvements include a cycle track, separated bike lanes, wayfinding, traffic and pedestrian signalization, lighting, landscape, and improved ADA circulation. Our final deliverable includes preliminary (30%) plans, cost estimate, and a PA report, and we recently have begun the development of Final Design construction documents.

Key Similarities: Roadway/transportation design, water/wastewater design, traffic safety analysis, drainage design, environmental assessment, geotechnical assessment

Contact Person: German Piedrahita, Senior Civil Engineer german.piedrahita@tempe.gov 480.350.8160

Broadway Road (Phase 1 - Mesa Drive to Stapley Drive) // Mesa, AZ

Kimley-Horn completed the planning and design of new high-pressure (HP) and intermediate-pressure City gas lines and 12-inch and 20-inch water pipelines within the congested corridor. This roadway segment consists of numerous existing, aging City gas, water, and sewer facilities, and numerous private utilities, which limited options for the new City water infrastructure. Kimley-Horn worked with City staff to develop and evaluate pipeline alignment alternatives; construction sequencing; traffic control; and adjacent property owner impacts. Kimley-Horn managed the design of HP and intermediate gas line improvements, including HP gas regulating stations, service lines, and meter replacement.

Key Similarities: Signal studies, traffic signal system coordination, safety studies, general studies, water/sewer design, roadway/transportation design, electrical design, street lighting

Contact Person: Craig Alteri, Project Manager craig.alteri@mesaaz.gov 480.644.2667

Similar Experience - Cont.

City of Goodyear, Recreation Center // Goodyear, AZ

Kimley-Horn worked with the City of Goodyear to provide master planning, final design, and construction phase services for the new ground-up recreation campus, which comprises a 30-acre community park, recreation center, aquatics facility, and 50-acre city park. The facility includes multi-use rectangular fields, two baseball fields, sport courts, multi-use pathways, restroom buildings, and parking areas. A featured element of the Goodyear Recreation Campus is an innovative playscape with slides integrated into hillslopes, topographic changes, and community-inspired elements.

Kimley-Horn provided MEP engineering for all phases of design and construction for the recreation center, aquatics building, maintenance building, restrooms, and the recreation campus. The mechanical design services included an HVAC design consisting of packaged rooftop units, evaporative coolers and split systems, exhaust fans, and a building automation system. The electrical design included electrical distribution; power; interior, exterior, site, and high-mast sports lighting and controls; fire alarms; and coordination with the City's partners for the telecommunications and audio and visual (A/V) systems design. The site included park lighting, sports field lighting, and restroom power. The buildings included electrical engineering for the pool, the building lighting, and power systems. The plumbing design services included domestic water, waste and vent, storm, and natural gas systems.

Key Similarities: Mechanical/HVAC, electrical design, street lighting, utilities, structural, transportation design, parking

Contact Person: Walt Kinsler, CIP Manager walter.kinsler@goodyearaz.gov 623.882.7959

In addition to the above-highlighted projects, our team has direct recent experience working with City staff on projects for the City of Las Cruces. **Shown below are our most recent contracts with the City, all of which were worked on by members on this on-call team.** We look forward to continuing our excellent working relationship with the City of Las Cruces as a part of this on-call contract.

Kimley-Horn - City of Las Cruces Project Experience:
Lohman Street Signal Retiming Phase 1
Lohman Street Signal Retiming Phase 2
Safe Streets and Roads for All (S4A) Grant Application
Fiber Support for Network Architecture
Third-Party Traffic Impact Analysis Review
High-Mast Lighting
Missouri Street and Trivits Street Retiming
North Main Street Retiming

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Molzen Corbin and Associates, of 1155 Commerce Dr, Ste F, Las Cruces, NM, 88011, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Molzen Corbin and Associates 1155 Commerce Dr, Ste F Las Cruces, NM 88011 ATTENTION: Kevin W. Eades

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

RE: General Engineering Services, RFP 23-24-051
(We are in receipt of Addendum 1, dated February 13, 2024.)

Dear Members of the Selection Advisory Committee:

Molzen Corbin is pleased to present this proposal to provide General Engineering Services to the City of Las Cruces. Our Las Cruces branch has served the City for 40 years, designing your roadway, water system, wastewater system, and drainage improvements. We have been honored to partner with the City of Las Cruces and hope to never take our relationship for granted. We work hard to be **your Go-To-Firm**, not simply because we are local, but because we provide the highest quality professional engineering services the City requires. Our ability to deliver is based on the following strengths:

- **Team Continuity:** Molzen Corbin has numerous senior engineers and architects that you are familiar with that have more than 40 years of continuous experience in the City of Las Cruces. You will not be dealing with new faces after the contract is signed. Our workforce is reliable, empowered, and motivated to once again serve the City of Las Cruces and we see our own success directly tied to Las Cruces' success.
- **Local Knowledge Base:** Molzen Corbin's engineers and architects are familiar with most of the City's infrastructure needs. Because of our diverse local experience in water, wastewater, gas, transportation, stormwater, and facilities, and our knowledge of your current infrastructure and future needs, we believe that Molzen Corbin is an ideal choice for this on-call contract.
- **Maximum Value for the Money:** We are more than a consultant—we become your partner in seeking opportunities to economically grow Las Cruces because of our vested interest. Molzen Corbin offers the City the best of both worlds: high-quality, high-value projects delivered from a local office. Our resources are used to ensure that every project, conversation, and task delivers value to the City of Las Cruces.

We trust that the following submittal underscores the unique knowledge and benefits of the Molzen Corbin Team. We look forward to continuing our successful relationship with the City of Las Cruces.

Sincerely,
MOLZEN CORBIN

Kevin W. Eades, PE
President and Chief Executive Officer

City of Las Cruces Business Registration Certificate

1. Technical Approach to the Project

About Molzen Corbin

Molzen Corbin is a nationally ranked firm with deep roots in this State. We have provided a diverse portfolio of engineering services to New Mexico's public entities since 1960. Molzen Corbin has a successful branch office in Las Cruces, and has served the City for over 40 years. Our strong track record for the delivery of high-quality projects on time and within budget is reflected in the fact that 90% of our business comes from repeat clientele. A majority of the clients we began with 64 years ago are still with us today on a retainer basis.

Technical Approach

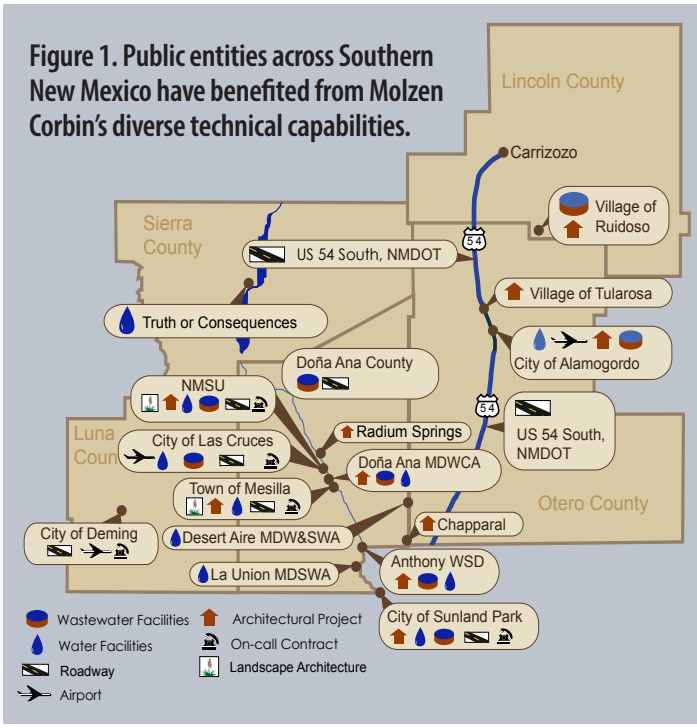
As we have in the past, Molzen Corbin will continue to provide planning, design, and construction phase services on a work-order basis. We will also provide day-to-day consultation services and attend conferences and meetings to remain informed about projects and issues. Molzen Corbin's general process and approach is as follows:

- **Project Scoping/Programming:** Work with the City to fully define the scope for each project. This step is arguably the most important step in any project. To fully understand your needs, we will continue to work closely with the City in an open exchange of ideas. Using your input, we will develop a project scope that is a full and accurate reflection of your needs and goals.
- **Studies:** Gather data including on-site measurement, drainage studies, master plans, utility rate studies, and other pertinent information.
- **Preliminary and Final Design:** Prepare complete working drawings, technical specifications, contract documents for bidding (e.g., bonds, insurance, etc.), quantity take-offs, and cost estimates.
- **Bidding:** Provide assistance in advertising for bids, distributing plans and documents for bidding, receiving and tabulating bids, award recommendations, checking bond and insurance forms and issuing notice to proceed for construction.
- **Construction:** Provide project/construction observers (full time if required), inspection services if desired.
- **Project Closeout:** Prepare drawings for permanent records, including changes; provide O&M manuals and operator training for treatment plants or electrical system projects.

Technical Capabilities

Molzen Corbin employs 90 in-house professionals in the fields of civil, water, wastewater, and airport engineering; architecture and landscape architecture; planning and grants administration. We offer the operational agility and depth of staff needed to provide highly responsive services to the City. The map below (Figure 1) illustrates the depth and breadth of Molzen Corbin's technical experience in Southern New Mexico. Following we describe our technical capabilities in transpor-

Figure 1. Public entities across Southern New Mexico have benefited from Molzen Corbin's diverse technical capabilities.



tation engineering, water resources engineering, drainage design, electrical and mechanical engineering, and architecture.

Transportation Engineering

Molzen Corbin has designed more than 880 miles of highways, streets, and roads throughout New Mexico, including rural roadways, residential streets, and urban arterials, as well as rural, urban, and interstate highways. **Our transportation experience has included a wide range of design elements, including utilities and storm drainage; bridges and street paving; curb, gutter, and street lights; bike lanes; roundabouts; street and sidewalk improvements; and ADA compliance and right-of-way (ROW).** Figure 2 illustrates our Statewide experience in roadway design.

Drainage Design

Molzen Corbin has worked with entities ranging from the New Mexico Department of Transportation (NMDOT) to the U.S. Army Corps of Engineers, Albuquerque Metropolitan Area Flood Control Authority, and municipalities across the State in addressing drainage projects, including in the City of Las Cruces. Our project experience includes drainage master plans, new drainage systems, flood control structures, and extensions to existing systems in conjunction with road design and site development projects (see Figure 3).

Sitework

Molzen Corbin's Civil Engineering Division is experienced in site development plans for new or renovated buildings or structures. Our team prepares drainage and grading plans, utility layout plans, and stormwater pollution prevention plans for government and commercial facilities. These site plans are developed with sensitivity to the surrounding environment to match the character of the area in which they are located. Earthwork is minimized based on site conditions and balanced with the needs of the facility. Our site development plans have included sites as small as half-acre commercial lots to a 50-acre resort development.

Figure 3. Molzen Corbin offers diverse, statewide project experience in drainage design.

Water Resources Engineering

Molzen Corbin's experience in water system design includes every facet of water systems, from wells and reservoirs to filtration facilities and booster pump stations. Our experience in wastewater system design is similarly diverse, and includes everything from PERs and master plans to collection systems and wastewater treatment plants. We have completed more than 600 water and wastewater projects since 1960. Figure 4 illustrates our experience in the planning and design of water and wastewater systems.

Electrical/Mechanical Engineering

Our Electrical and Mechanical Engineering Division has a strong reputation for troubleshooting, analyzing, and designing innovative and reliable electrical and mechanical systems. Our electrical team has been sought out by municipal clients and assigned to take over and complete projects that other MEP (mechanical, electrical, and plumbing) firms could not complete.

- **Electrical Engineering:** We have extensive experience in street lighting, water and wastewater facilities, controls and instrumentation, supervisory control and data acquisition (SCADA) systems, airport lighting, and lighting for architectural and landscape architectural projects. Design services we have provided include utilities support, telemetry and control instrumentation, solar power generation, primary and secondary power distribution, interior and exterior lighting, communications, fire and intrusion alarm systems, and security and auxiliary systems for a variety of water production and distribution facilities, wastewater collection and treatment facilities, municipal and public buildings, and industrial facilities.
- **Mechanical Engineering:** Our mechanical team specializes in designing cost-effective, innovative, and user-friendly HVAC, plumbing, and gas systems for a variety of building facilities, including educational facilities, office buildings, medical facilities, and research laboratories, as well as mechanical equipment assessments for buildings and water/wastewater facilities. Our project experience ranges from mechanical design, construction cost estimation, project planning, and construction services

Figure 4. Molzen Corbin has designed more than 600 water and wastewater projects since 1960, including numerous projects for the City of Las Cruces.

including new mechanical systems, as well as the optimization of existing systems.

Architecture/Landscape Architecture

Molzen Corbin's in-house architectural division specializes in user-friendly architectural design for public entities. Our team's range of experience includes the planning and design of diverse public works facilities and municipal buildings, from well houses and booster pump stations to Town Halls, public safety complexes and public parks.

Molzen Corbin has produced landscape designs and site plans for buildings, public spaces, roadways, parks and recreational areas, and other facilities. Our park designs have included gymnasiums; athletic fields; courts for pickleball, tennis, basketball, and volleyball; picnic areas and parking areas; trails; aquatic facilities; native, exotic, and specialized landscaping and irrigation; skate parks; and stormwater features (such as ponds, arroyos, and bridges).

Molzen Corbin's Specialized Services

Molzen Corbin recognizes that project demands often go beyond technical tasks, and as such we offer a diverse portfolio of special services.

- **Master Planning:** Molzen Corbin has prepared numerous Master Plans for our municipal clients that included segments of the community that required special study or for improvements to the community as a whole. These Master Planning efforts have included Comprehensive Plans, Water Master Plans, Wastewater Master Plans, Stormwater Master Plans, and Transportation Plans.
- **Public Involvement:** Molzen Corbin typically schedules and conducts all of the public meetings to communicate project information, and attends City Council meetings.
- **Expert Witness Testimony:** Molzen Corbin has been a reliable expert witness for the City, and can continue that relationship in the future if called upon.
- **Bid Documents:** Molzen Corbin has designed public works projects for public entities, including plans and specifications developed in compliance with State and Federal regulations and procurement requirements, local procurement requirements, and industry standards.
- **Surveying:** Molzen Corbin's in-house surveying capabilities range from base mapping to detailed infrastructure surveys, performed by experienced surveyors using state-of-the-art Trimble R10 Integrated GNSS System. Our team has field experience with the finish techniques required by the City of Las Cruces.
- **Construction Observation:** Our in-house observers have been very effective in ensuring that our projects are constructed to the highest level of quality and conformance to the contract documents.

Management Structure and Approach

Molzen Corbin pioneered the use of on-call engineering and architectural agreements in the 1980s. Today, on-call clients remain at the heart of our business. We currently hold on-call contracts with 51 municipalities and counties, including with the City of Las Cruces. We are organized and staffed expressly to meet the day-to-day and long-term needs of public entities, providing rapid response and personalized service. Over the years, we have provided on-call engineering and architectural services to public entities throughout the State (see Figure 5).

Project Highlight: Harrelson Street, City of Las Cruces

As part of our Civil Engineering On-Call with the City of Las Cruces, Molzen Corbin completed roadway and utility design, including site development and drainage, on Harrelson Street.

Day-to-Day Operation of the Contract

Molzen Corbin offers the operational agility and depth of staff needed to provide highly responsive services to the City of Las Cruces. Our proposed project manager, Mr. John Montoya, PE, PS, PTOE, is a Molzen Corbin Vice President with more than 30 years of project experience with the City. He is very knowledgeable with our on-call approach and procedures, as well as with City staff and processes. Following, we describe our management and operational approach.

- **Day-to-Day Technical Services and Small Task Order Work:** Mr. Montoya will serve as the City's primary point of contact. When the City needs day-to-day technical services or requests small task order work, you may call Mr. Montoya directly. He will either assist you himself or assign a lead engineer from the appropriate discipline to provide the needed service.
- **Large Projects:** For larger design projects Mr. Montoya will either serve as Project Manager or assign that role to an experienced engineer from the appropriate discipline. Once the project begins, the City may interface with either Mr. Montoya or the Project Manager. Project Managers will provide Mr. Montoya with regular updates on project schedules, budgets, status, and other issues.

Tasks to be Accomplished

Following are a few of the services we will provide to the City under this contract:

- Master Planning
- Structural design, including buildings and retaining walls
- Roadway, transportation, and parking lot design
- Site development (e.g., grading and drainage design)
- Electrical design (e.g., wells, booster stations, lift stations, odor control stations, buildings)
- Computer network analysis for GasWork, InfoWater, and InfoSewer
- SCADA System Design
- Mechanical, gas system, plumbing, and HVAC design
- Water, wastewater, and natural gas utility system design and analysis
- Traffic impact studies and transportation modeling
- Photometrics and street lighting
- Drainage studies, including FEMA flood studies
- Storm drainage
- Solid waste studies and landfill system design and analysis
- Environmental surveys and assessment monitoring and management (e.g., indoor air quality, asbestos, mold, and other related services)
- Geotechnical assessments, such as soil and groundwater testing for contamination, remediation, and related services
- Expert witness in a judicial and/or quasi-judicial setting
- Project management
- Construction inspection

Services to be Provided Under Each Task

Scoping Meeting

When contacted by the City of Las Cruces, Molzen Corbin will form a scoping team consisting of staff from the City, Molzen Corbin, and subconsultants.

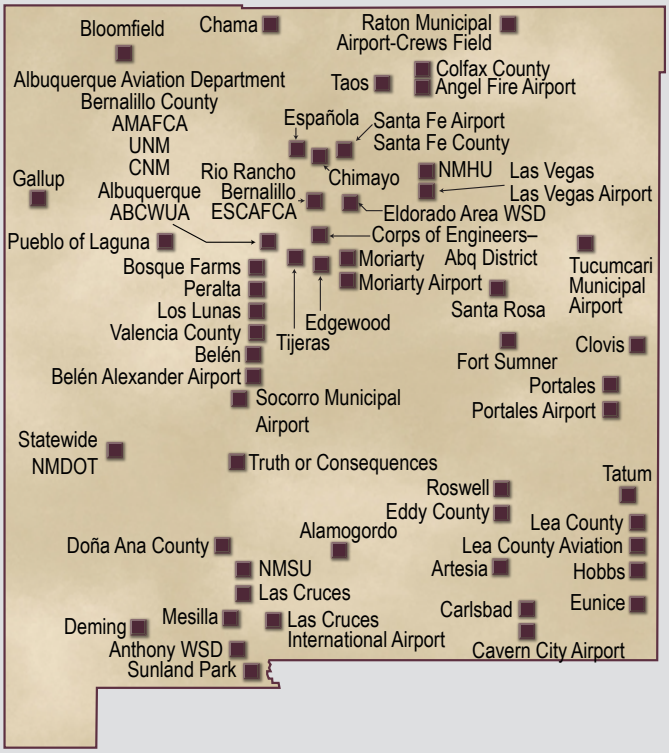

Figure 5. Molzen Corbin has provided retainer services to many different entities across the State throughout our history, including providing on-call engineering services to the City of Las Cruces for almost 40 years.

The scoping meeting will provide all parties with the opportunity to discuss project parameters, ask questions, and work together to resolve challenges.

Molzen Corbin will carefully consider the input of the City's user group in identifying elements that will influence the scope, schedule, and budget of each project or task. To ensure that the City gets the most value for money spent, we will also address funding sources and look for opportunities to narrow the scope so that unnecessary tasks are eliminated. A project schedule with milestone dates will also be established at this meeting.

Such up-front project development will not only be used as the basis of the engineering agreement, it will serve as a guide in the execution of the task order.

Milestone Meetings

Mr. Montoya and key project team members will meet with the City at the conclusion of each task to update the City on project status, review technical information, answer questions, and solicit feedback from the City to ensure that the project is continuing on schedule and to the City's satisfaction. Examples of key milestone meetings for a roadway project are as follows:

- Drainage Plan Review
- Survey and Existing ROW Review
- Existing and Proposed Utility Review
- Roadway Alignments
- Roadway and Utility Profiles
- Lighting and Erosion Control
- Right-of-Way Acquisition (if needed)
- Technical Conflict Resolutions (utilities, ADA, drainage, driveways, etc.)
- Environmental Document Review

Final Design Review

Molzen Corbin will also hold design review and final design review meetings with the City to coordinate the final plan set for bidding and complete minor changes. All design elements will have already been reviewed during the milestone meetings, which should be the basis of the final design drawings.

Quality Control

To ensure that the City receives the highest possible quality on each project, Molzen Corbin will implement a peer review quality control plan, with oversight provided by Mr. Jerry Paz PE.

Molzen Corbin and our subconsultants will each conduct a quality review of the other firm's work for each project or task. Each review will consider completeness, accuracy, and whether the work is meeting the project goals.

This peer review process is essential to the development of the project and will be integrated into scheduled project team meetings. Frequent, thorough quality checks will enable the project team to identify and correct potential problems during the project, when they can be addressed in a cost-efficient manner.

Project Schedule

Molzen Corbin has sustained an excellent performance record for timely delivery of projects and control of costs. Figure 6 below provides examples of Molzen Corbin's cost and schedule performance on similar relevant projects. Our approach to controlling costs and meeting schedules is summarized below.

Cost Control During Design

- **Planning for the Project:** Starting with a detailed planning effort helps to define the scope of work for any project. Detailed planning and the corresponding coordination effort helps to ensure that the client and engineer are working toward the same goals. It is also much easier to make changes during a planning phase than during design. Finally, a well-thought-out

Project/Client	Estimate	Close Out	Owner's Deadline	Completion Date
I-25/University Interchange, NMDOT	$38,000,000	$35,327,282	October 2021	October 2021
Valley Drive (Phase II), NMDOT	$22,973,000	$25,598,110	March 2020	April 2020
Bowman Avenue, Mesilla	$443,860	$428,297	November 2019	November 2019
Harrelson Street, Las Cruces	$786,402	$824,739	November 2018	November 2018

Figure 6. History of Past Performance

plan results in a shorter design schedule and a corresponding project cost savings.

- **Control of Work Hours:** Molzen Corbin uses project management and cost accounting software to develop a design fee cost estimate, or budget, for each task based on manhours and rates. Our cost accounting system generates cost reports automatically every week. We use these to compare each task's manhours used to the manhours remaining in the budget and the estimated percent complete. This proactive approach allows us to identify deviations from the project plan early on and make appropriate adjustments to mitigate any impacts on the design costs.
- **Review of Percent-Complete Report:** Each month the project manager submits a percent-complete report for review by the appropriate department head. If the percentage of budget expended is greater than the percentage of completion (*e.g.*, a project is only 20% complete but 50% of the budget is expended) and the project scope has not changed, then the department head assigns more resources (without cost to the owner) to enable the project to achieve completion.
- **Proactive Communication:** Communication between the client and engineer throughout design is essential to cost control. We establish a budget early on and use milestone meetings to communicate design progress and estimated costs.

Schedule Control

Molzen Corbin has a fully staffed office in Las Cruces to serve communities and municipalities in southern New Mexico. This local office makes Molzen Corbin especially suited to respond to the City's needs in this contract. Molzen Corbin's success in delivering projects on time is due primarily to three important factors:

- **Detailed Project Schedule:** A detailed project schedule is developed and includes critical milestones and activities required of all stakeholders including project production and review. The schedule is used as a tool to help manage project progress and regularly scheduled meetings are used to secure valuable input.
- **Local Project Control:** Because Molzen Corbin is a New Mexico company and is locally owned and operated, project control is established effectively and efficiently. The local control allows dedication of all resources needed to meet critical deadlines while providing the agility needed for unanticipated changes.
- **Team Experience:** Our team has been working together on similar projects for many years. This experience translates to effective and efficient production of design documents.

Sample Project Schedule

Figure 7 shows a sample work schedule with project milestones. Molzen Corbin utilizes Microsoft Project, Primavera, and SureTrack scheduling programs to manage the work flow and meet project deliverables.

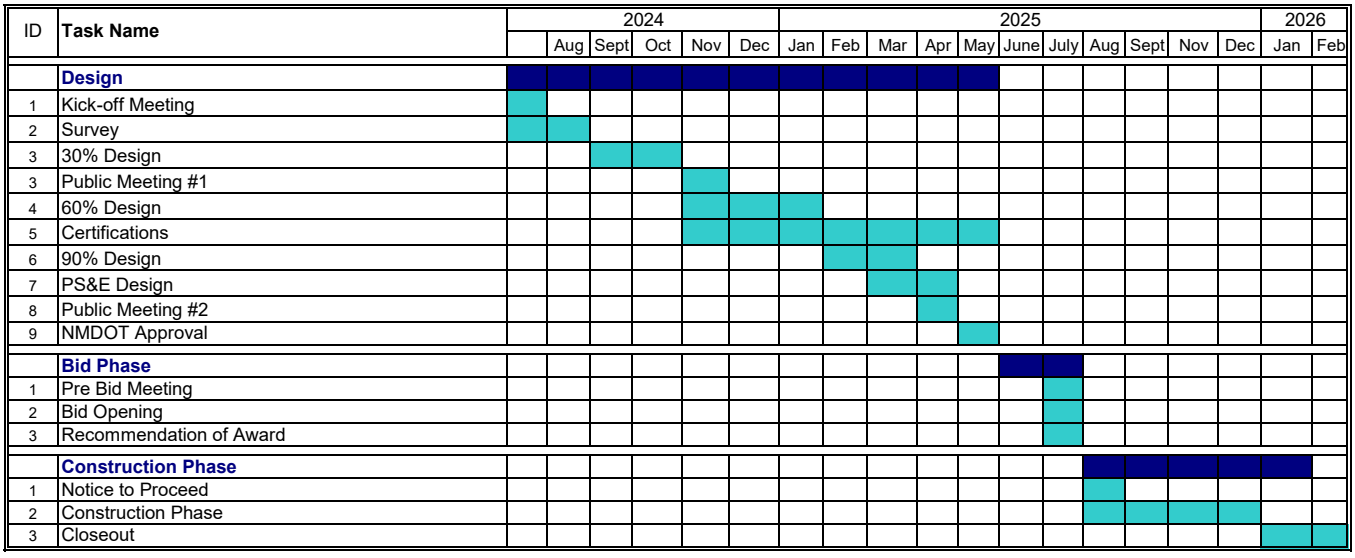

Figure 7. Molzen Corbin sample project schedule, including major phases and tasks.

2. Qualifications and Competence of Team

Molzen Corbin has a solid track record for meeting project schedules, including condensed schedules. Our project experience, depth of staff, and technical expertise enable us to quickly mobilize our resources to align them with concurrent activities on complex projects.

As a multi-disciplinary firm, Molzen Corbin has the technical expertise and in-house staff to successfully complete the diverse range of tasks and services anticipated under this contract. Based on our extensive engineering and analysis experience, along with our depth of our staff and our familiarity with the City of Las Cruces, we can unequivocally state that we will be able to accommodate the City's project needs, including any and all specialized services, to meet any necessary time limitations.

We have assembled a highly experienced project team to effectively execute this contract for the City of Las Cruces. An organizational chart illustrating our team members and their roles and responsibilities appears below (Figure 8). On the following pages, we provide résumés of our key project team members, including their experience, area of competence, and percent of time assigned to project.

Key Personnel

John Montoya, PE, PS, PTOE: Project Manager

NM PE #12423, NM PS #13057, PTOE #3426 | B.S. in Civil Engineering Technology, NMSU | Years of Experience: 39 | Time Assigned: 20%

Mr. Montoya is a Molzen Corbin Vice President whose 39 years of experience encompasses assignments as a design engineer, project manager, client manager, and company surveyor on public works projects across southern New Mexico. These projects have included traffic engineering, roadway design,

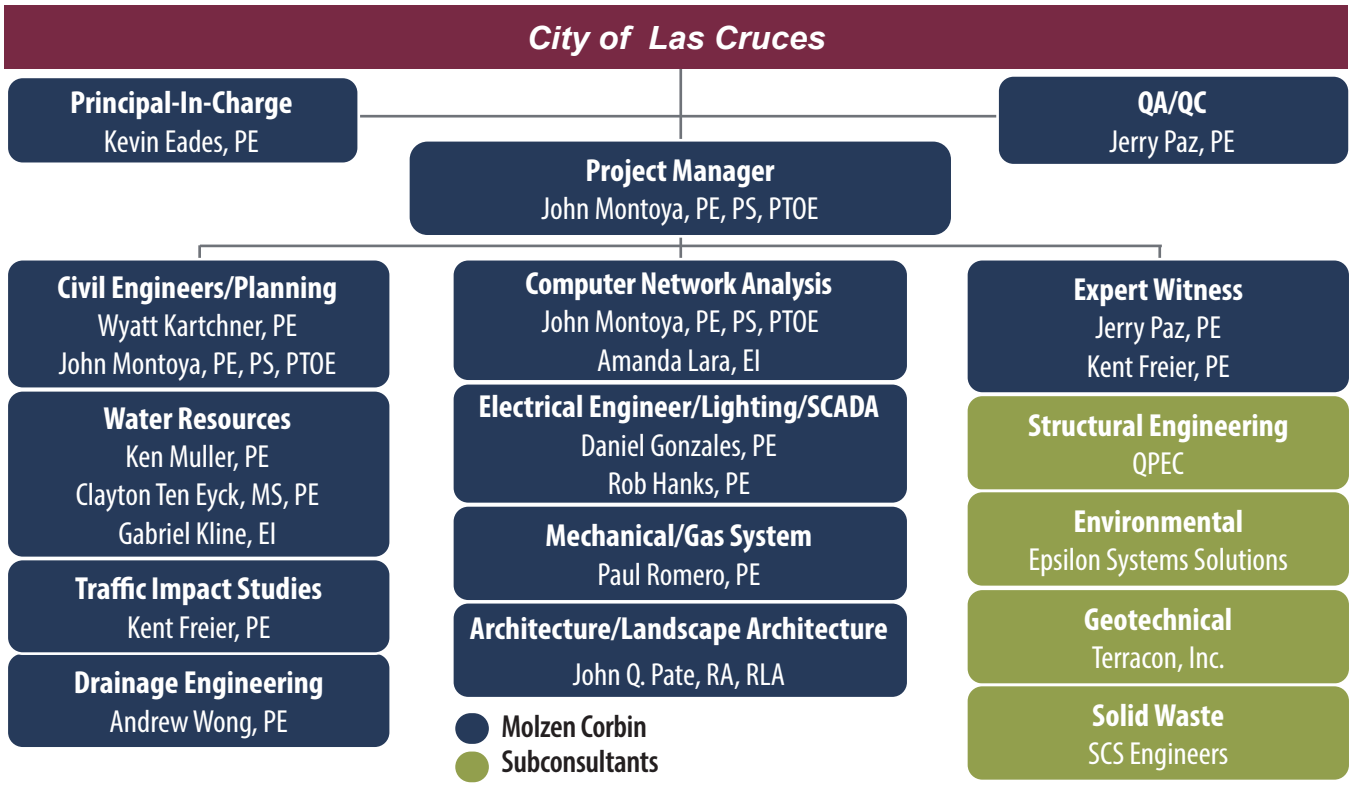

Figure 8. Molzen Corbin's proposed project team.

major arterial design, multi-modal transportation planning and design, site development, water and wastewater system design, drainage and grading design, and stormwater detention basin design. Mr. Montoya also has considerable experience in the field of surveying and is a registered professional surveyor.

Mr. Montoya's project experience with the City of Las Cruces has spanned several decades, and he currently serves as the project manager for our engineering on-call contracts with the City of Las Cruces. His project experience with the City includes Harrelson Drive, Reynolds Drive, 14th and 17th Streets, the West Hadley Avenue Reconstruction, and roadway design for the CD-9 and CD-12 Street Improvements. He has also provided parking lot design, airport design, street lighting design, signal design, fencing design, and storm sewer and site development, including drainage and grading design. Mr. Montoya also has considerable experience providing transportation design and engineering service for numerous NMDOT projects in the region, including I-25/University Interchange Improvements (Las Cruces), Arrowhead Interchange Study, and West Mesa Corridor Phase A/B Study.

Areas of Competence: Project Management, Traffic Engineering, Roadway Planning and Design, Multi-Modal Design, Surveying, Site Development, Water and Wastewater Design, Computer Network Analysis, and Master Planning

Kevin Eades, PE: Principal-in-Charge

NM PE #14481 | B.S., Civil Engineering, NMSU | Years of Experience: 29 | Time Assigned: 2%

Mr. Eades is Molzen Corbin's President and Chief Executive Officer with 29 years of professional project management, master planning, and design experience. He has strong project management and client-relations experience and is especially talented in working with clients on a one-to-one basis to ensure that their needs are met. In addition to project coordination and development, he has designed and managed drainage, water, sewer, traffic, and roadway improvement projects across the state. He has served as the Technical Services Manager for numerous on-call contracts, including Belen (27 years), NMDOT (27 years), and Los Lunas (27 years), covering tasks across all engineering disciplines.

Areas of Competence: Project Management, Contract Management, Roadway Planning and Design, Traffic Engineering.

Jerry B. Paz, PE: QA/QC

NM PE #10521 | B.S., Civil Engineering, New Mexico State University (NMSU) | Years of Experience: 40 | Time Assigned: 4%

Mr. Paz is Molzen Corbin's Chief Operations Officer and leads our Water Resources Department. He has 40 years of experience in the design and management of water-related projects, including development of water master plans and design of numerous transmission, storage, and distribution improvements for communities across New Mexico. In addition, he has extensive experience as engineer-in-charge of large regional wastewater system design and improvements, and in performing quality control reviews of small to large regional wastewater and water resources system projects for planning, design, and construction of improvements. Most recently, he has been responsible for the planning and design of over $900 million in infrastructure improvements in New Mexico and Texas.

Areas of Competence: Quality Control and Document Review, Roadway Design, Water and Wastewater Design, and Expert Witness

Wyatt Kartchner, PE: Civil Engineering/Planning

NM PE #20843 | Education: B.S. in Civil Engineering, NMSU | Years of Experience: 16 | Time Assigned: 15%

Mr. Kartchner is a Molzen Corbin Vice President and Principal Engineer with more than 16 years of experience. He has successfully managed numerous multi-million-dollar roadway, water, wastewater, and

drainage projects and studies throughout the State. He specializes in transportation projects, including roadway and interchange design, drainage analysis and design, and utility planning and design. He served as project manager and lead engineer on the NMDOT I-25/University Interchange Project at the NMSU campus.

Areas of Competence: Roadway Design, Drainage, Utility Planning and Design, Master Planning, Community Involvement

Ken Muller, PE: Water Resources

NM PE #12548 | B.S., Civil Engineering, California Polytechnic Institute | Years of Experience: 53 | Time Assigned: 15%

Mr. Muller has 53 years of experience planning and designing water and wastewater facilities from small to large. His water projects include designing raw and finished water transmission lines, pressure-reducing stations, booster pump stations, storage, and systems to remove organics; and writing water system preliminary engineering reports (PERs). Mr. Muller also performs in-house quality control reviews of many Water Resources pre-final contract documents, as well as maintains Molzen Corbin's standard Water Resources specifications.

Areas of Competence: Water Treatment, Wastewater Treatment, and Value Engineering

Clayton Ten Eyck, PE: Water Resources

NM PE #18866 | M.S., Environmental Engineering, Utah University, B.S., Civil Engineering, Northern Arizona University | Years of Experience: 19 | Time Assigned: 15%

Mr. Ten Eyck, MS, PE, has 18 years of experience in water and wastewater engineering, including designing wastewater treatment, collection, and effluent reuse improvements for several municipalities, tribes, utilities, and water and sanitation associations. At Molzen Corbin, Mr. Ten Eyck has managed several multi-discipline water and wastewater treatment plant projects.

Areas of Competence: Water Treatment, Wastewater Treatment, Project Management, Municipal Infrastructure, and Value Engineering

Gabriel Kline, EI: Water Resources

NM EI #7737 | B.S., Civil Engineering, NMSU | Years of Experience: 3 | Time Assigned: 20%

Mr. Kline has three years of civil engineering experience, including roadway design, traffic safety analysis, site design, drainage studies, water treatment studies, master planning, and municipal utility design. His experience includes working on the Sewer Collection System portion of the Las Cruces Utilities Master Plan. He has contributed to Phase A/B reports, design calculations, specifications, drafting, and scientific analysis.

Areas of Competence: Utility Design and Engineering Technical Support

Kent Freier, PE, CFM: Traffic Impact Studies

NM PE #8182 | B.S., Civil Engineering, Texas Tech University | Years of Experience: 46 | Time Assigned: 15%

Mr. Freier has more than 46 years of experience. Formerly the manager of our Las Cruces branch office, he has a strong familiarity with the City of Las Cruces and the City's design issues. His project experience includes the management, planning, and design of civil engineering projects, including site grading and drainage, utilities, roadways, park facilities, and subdivisions. Mr. Freier's major road and highway experience ranges from traffic studies, arterial roadways, rural highways, and utilities to completing traffic control plans and roadway alignment studies.

Areas of Competence: Traffic Impact Studies and Traffic Modeling and Expert Witness

Andrew Wong, PE: Drainage Engineering

NM PE #25643 | B.S., Civil Engineering, NMSU | Years of Experience: 9 | Time Assigned: 20%

Mr. Wong is a professional engineer with 9 years of experience. He is a vital member of Molzen Corbin's Transportation Team supporting several key NMDOT projects from the Las Cruces Office, including the I-25/University Interchange and US 285 projects. Mr. Wong also has direct experience in the areas of hydrologic analysis, hydraulic analysis, scour analysis, traffic capacity, traffic safety, water distribution systems, and wastewater collection systems. He most recently provided drainage design services for the NMDOT's I-25/Williamsburg Interchange Improvements Project.

Areas of Competence: Drainage, Roadway, and Utility Design

Amanda Lara, EI: Computer Network Analysis

B.S., Civil Engineering, NMSU | Years of Experience: 5 | Time Assigned: 20%

Ms. Lara is an engineering intern with 5 years of professional experience with Molzen Corbin. Since joining Molzen Corbin, she has assisted in the design of numerous roadway, water, and wastewater projects, including a major sewer interceptor repair and rehabilitation project in Ruidoso, NM. While pursuing her Civil Engineering degree at NMSU, she worked as an Engineering Coop for the City of Las Cruces Utilities Department. She assisted the Utilities Department with project management documentation, reports, and correspondence. She is proficient in AutoCAD and Civil 3D.

Areas of Competence: Construction Management, Utility Design, Roadway/Traffic Planning and Design, and Computer Network Analysis

Daniel Gonzales, PE: Electrical Engineering/Lighting

NM PE #25643 | B.S., Electrical Engineering, NMSU | Years of Experience: 19 | Time Assigned: 15%

Mr. Gonzales has 19 years of experience in the design of power, instrumentation and controls and SCADA systems. Related projects include low pressure sewer systems for Peralta, Tijeras, and Mesilla. Other recent projects include the SCADA Preliminary Design for the Eldorado Water & Sanitation District, the Village of Chama Water Treatment Facility, a well for the Greater Chimayó Mutual Domestic Water Consumers Association, the Buckman Water Treatment Facility for the City of Santa Fe, and wastewater treatment facilities for Ruidoso, Las Vegas, Sandia Pueblo, and Albuquerque. His work is critical to ensuring proper function of the plant's electrical equipment, communication, and controls.

Areas of Competence: Electrical Engineering and Lighting Design

Robert Hanks, PE: Electrical Engineering/SCADA

NM PE #23949 | B.S., Electrical Engineering, Louisiana Tech University | Years of Experience: 40+ | Time Assigned: 20%

Mr. Hanks has 40+ years of experience as an electrical engineer specializing in electrical and instrumentation and control (I&C) system design and implementation. Prior to joining Molzen Corbin, Mr. Hanks was a Principal I&C Technologist at CH2M Hill. He was intimately involved in overseeing the layout, design, and specification of instrumentation and control equipment and power systems for large industrial projects, water and wastewater treatment facilities, booster pump stations, and sewage lift stations.

Areas of Competence: SCADA Design and Instrumentation and Controls

Paul Romero, PE: Mechanical /Gas System

NM PE #14932 | B.S., Electrical Engineering, NMSU | Years of Experience: 29 | Time Assigned: 20%

Mr. Romero brings 29 years of experience to the Molzen Corbin team. He is a senior mechanical engineer skilled in leading efforts to sustain, optimize, and improve existing facilities while ensuring design and construction meet codes and client requirements. He has provided HVAC, plumbing, process piping, and fire protection design, and/or construction services for several New Mexico projects along with engineering analysis, project management, planning, and construction cost estimating services. Mr. Romero is also experienced in providing quality assurance technical reviews and facility maintenance engineering support on varying projects.

Areas of Competence: HVAC Design, Plumbing Design, and Gas System Design

John Pate, RA, RLA: Architecture/ Landscape Architecture

NM RA #1784, NM RLA #87 | B.S., Architecture, UNM | Years of Experience: 48 | Time Assigned: 10%

Mr. Pate has 48 years of experience in master planning and designing architectural and landscape projects. As a project manager, Mr. Pate's experience with diverse construction methods and materials enables him to provide meaningful direction to multi-disciplined teams. His approach to design balances function and aesthetics with a focus on cost savings, labor-saving building techniques, and the efficient use of materials. Due to his decades of experience working with municipal, State, and Federal clients, Mr. Pate has a strong sensitivity for producing projects within inflexible budget and time constraints. As a landscape architect, Mr. Pate has worked extensively in all facets of site, neighborhood, and park development and landscape design.

Areas of Competence: Architecture and Landscape Architecture

Principal Officer

Mr. Kevin Eades, PE (NM PE #14481), President and Chief Executive Officer, is the principal member/officer of the firm who will be responsible for administration of this contract.

2701 Miles Road SE
Albuquerque, New Mexico 87106
(505) 242-5700/FAX (505) 242-0673
keades@molzencorbin.com

Subconsultants

Our full list of proposed subconsultants is provided in Figure 9 on page 13.

Work Performance Location

Molzen Corbin has maintained an office in Las Cruces for nearly 40 years. We offer full-service capabilities that have proven to be highly responsive to the City. At the same time, we are able to draw on our Albuquerque office for additional depth of staff when required.

Mr. Montoya, PE, will manage this project from Molzen Corbin's Las Cruces office at 1155 Commerce Drive, Suite F. Based on our past performance on similar projects, we estimate that 90% of the work for the City on this project will be completed in our Las Cruces office, with the remaining 10% completed in our Albuquerque office at 2701 Miles Road, SE.

Professional Responsible for Work

As Project Manager, Mr. John Montoya, PE (NM PE #12423), Vice President, is the principal member/officer of the firm who will also be in direct responsible charge of the work.

1155 Commerce Drive, Suite F
Las Cruces, New Mexico 88011
(575) 522-0049/FAX (575) 522-7884
jmontoya@molzencorbin.com

Figure 9. Molzen Corbin has cultivated decades long relationships with our trusted subconsultants.

Team/Responsibility	Experience & Areas of Competence
QPEC: Structural Engineering 4343 Pan American Freeway, NE, Suite 238, (505) 858-1456 Contact: Fernando Quiroga, PE Typical Percent of Time: 5%	Quiroga-Pfeiffer Engineering Corporation (QPEC) provides quality structural engineering services and is very experienced in the structural design of steel and concrete water tanks. QPEC has supported Molzen Corbin with structural engineering services since 1996. As a valued extension of our staff, QPEC has committed to meet all project requirements when teamed with Molzen Corbin.
Epsilon Systems: Environmental 205 W. Boutz Road, Bldg 4, Suite 3, Las Cruces, NM 88005, (575) 528-8197 Contact: Brad Beacham Typical Percent of Time: 5%	Epsilon Systems Solutions, Inc. (Epsilon Systems) is a certified resident New Mexico business. Epsilon Systems' professionals offer comprehensive regulatory support, guiding clients through environmental processes in both simple and complex situations. Epsilon Systems' strategic approach is based on a thorough understanding of environmental issues, the governing statutes, and the technical basis upon which the regulations were written.
Terracon: Geotechnical Services 4450 Bataan Memorial East, Las Cruces, NM 88011, (575) 527 1700 Contact: Ivan Avelar, PE Typical Percent of Time: 5%	Terracon is an employee-owned consulting engineering firm founded in 1965 that specializes in geotechnical, materials, environmental, and facilities. Terracon provides geotechnical field investigations, engineering analysis, report preparation, and laboratory and field testing services throughout New Mexico. Terracon has been part of the Molzen Corbin team on numerous projects in New Mexico for over 20 years.
SCS Engineers: Solid Waste 500 Marquette Avenue, NW, Suite 1200, Albuquerque, NM 87102, (505) 349-8060 Contact: Tom Parker, PE, BCEE Typical Percent of Time: 5%	SCS is one of the most widely respected solid waste consulting firms in the country, helping clients optimize solid waste operations and environmental controls. They serve public and private sector clients by providing comprehensive solid waste management services for landfills and solid waste facilities, including program design and implementation, master plans and studies, regulatory compliance, financial analysis, and public outreach.

3. Performance of the Firm with Previous Clients

I-25/University Interchange, NMDOT

Molzen Corbin recently completed the design of the I-25/University Interchange in Las Cruces. This NMDOT led project was a collaborative effort between the NMDOT, City of Las Cruces, and NMSU to accommodate the needs of all entities. This project includes a direct connection from I-25 to the NMSU campus to ease congestion along I-25 and University Avenue. This direct connection is completed with a new bridge on University Avenue that allows the interstate off-ramp and Triviz Avenue to pass under University Avenue. This project includes two new roundabouts that are specially designed for all modes of transportation from large semi-trucks to pedestrians. Molzen Corbin used several new and innovative things to make this project a success. These included:

- **Virtual Public Meetings:** Molzen Corbin worked with the NMDOT and City of Las Cruces to increase public participation for this major reconstruction project. Our team developed virtual public meetings that were streamed online and also on television. This allowed for people to watch and ask questions from various platforms, including social media, e-mail, telephone, or in person. This resulted in over 1,000 people viewing each public meeting.
- **Bridge Art Committee:** This project has two new bridges and 20 retaining walls which allow for this gateway to Las Cruces to be a showcase for art to reflect the City's culture and heritage. Molzen Corbin assembled a Bridge Art Committee that included local artists and NMDOT, City, and NMSU representatives to evaluate and select a New Mexico artist for the project. A total of 14 artists were screened down with 6 finalists being interviewed prior to the selection of the Las Cruces artist.

- **Envision:** Molzen Corbin implemented the Envision rating system on this project, the first project in New Mexico to use the system. Envision is a sustainable infrastructure rating system most often compared to LEED but developed specifically for horizontal infrastructure. Upon completion, this project received a Silver Envision rating.
- **Multi-modal Access:** Molzen Corbin dedicated substantial time and effort to improving multi-modal access on this project. Not only were sidewalks and bicycle lanes added to all local streets, but the Triviz trail was extended to connect to the NMSU Sisbarro Park.

I-25/University Interchange

While this was an NMDOT-led project, the City of Las Cruces played a huge role in the project and has contributed over $1.25 million to landscape the project. Through our on-call with the City, Molzen Corbin designed the landscaping and irrigation system to allow for this to be a gateway to the City. Molzen Corbin also designed the Triviz waterline replacement and gas line lowering for the City Utilities as part of this project.

Contact: Ms. Sherri Holliefield, PE, South Regional Manager, (575) 202-6594

Bowman Avenue, Town of Mesilla

Bowman Avenue servers as a collector street through a mix of land uses: farming and residential. Molzen Corbin was contracted by the Town of Mesilla to complete the survey (topographic and ROW) and roadway design, including a complete roadway replacement through the area. Upon coordinating with local entities, Molzen Corbin was contracted by the City of Las Cruces to design a replacement waterline, which was beneath Bowman Avenue to be bid with the roadway bidding documents.

The existing condition of the road was poor with drainage issues from beginning to end. The project began at University Avenue (NM 101) and terminated at Manso Avenue.

The waterline was designed parallel to the existing asbestos cement pipe with connection to the side streets, while keeping the existing utilities in service. The waterline was designed and phased so that the sections of the waterline could be connected late at night, limiting the disturbance to water service.

The roadway design consisted of a rural asphalt roadway section including driveway pads that matched the existing driveway material. The vertical roadway profile was designed to be elevated in areas adjacent to the farmland to preserve the roadway from the farmland irrigation. Our design also consisted of linear ponds throughout to accommodate roadway drainage. Bidding documents allowed for additive alternates to be incorporated within the bidding documents maximizing the use of the available funding.

The original design preserved the existing irrigation culvert on the north end of the project, but

Bowman Avenue

during construction it was obvious that the culvert was failing. The Town of Mesilla opted to replace the culvert to avoid any issues in the future.

Molzen Corbin provided a design for the culvert including headwalls and connection to existing ends, which was coordinated with Elephant Butte Irrigation District and the contractor. Molzen Corbin provided limited construction phase service to assist the Town of Mesilla in coordinating with the contractor, City of Las Cruces, and the funding agency. The project has been completed pending the final change order, which will be issued to balance the bid items. The project was successfully completed on time and within the budget.

Contact: Mr. Rod McGillivray (Former Public Works Director for the Town of Mesilla), Construction Project Manager, Spaceport America, (575) 267-8531, (575) 640-1988 (Cell)

Wastewater Treatment Plant, Anthony Water and Sanitation District (AWSD)

New 0.98 mgd WWTP (1995)

Molzen Corbin has been involved with AWSD since 1982. We designed the District's first wastewater treatment facility with aerated lagoons, which treated approximately 250,000 gallons per day. As the community grew and the demand increased, Molzen Corbin assisted AWSD in securing more than **$3 million in funding from NM State Special Appropriations, Rural Utility Service, and the US Economic Development Administration** to design and construct a new wastewater treatment facility. We also assisted in securing New Mexico's first Colonias grant for this project.

Molzen Corbin designed a new 0.98 mgd facility on the same site as the existing plant, while accommodating a tight timeframe and keeping the existing plant operational during construction. The new treatment facility was designed as an activated sludge system containing all process components that are contained within circular walls to reduce the facility's overall footprint (a concentric package plant). This included the aeration basins, clarifier, and sludge thickener with the ultra-violet light disinfection unit in close proximity. In anticipation of the EPA's stricter stance on nitrogen, we also designed the facility to be easily upgraded to accommodate future treatment requirements. The facility incorporated the use of the existing main plant lift station to reduce overall costs on the project.

WWTP Expansion (2023)

As a first step in the WWTP expansion project, Molzen Corbin completed a WWTP PER for AWSD, which included a comprehensive update to the WWTP and solids handling facilities. The PER was used to leverage the significant amount of funding needed for the WWTP expansion and renovations. The new design consists of a second concentric package plant to double the capacity of the existing facility. The new plant is being constructed adjacent to the existing plant as an identical, mirrored structure, so both facilities can share the treatment process and facilities (see diagram on bottom left), including the Entrance Works. Construction is currently underway with an anticipated completion date of late 2024.

Contact: Mr. Jose Terrones, Public Works Director, (575) 882-3922, (915) 630-5291 (Cell)

At AWSD's wastewater treatment plant, all process components are contained within the circular walls to reduce the facility's overall footprint.

23-24-051 GENERAL ENGINEERING SERVICES

PROJECT NAME

Pursuant to terms and conditions of City of Las Cruces (CITY) Contract No. 23-24-051 dated June 1, 2024 between the CITY and Molzen Corbin and Associates (ENGINEER), as amended and incorporated herein by reference, the City and Contractor hereby agree on this _____ day of _____, 20___, as follows:

1. In a satisfactory and proper manner, the ENGINEER shall perform SERVICES as proposed in response to the CITY's RFP No. 23-24-051 and ENGINEER's proposal as set forth in ATTACHMENT A attached hereto.

2. The estimated completion date is number days after a Notice to Proceed is issued by the CITY to the ENGINEER.

3. In consideration for the satisfactory completion of the work agreed to herein, compensation shall be made in the amount of $dollars.cents, plus NMGRT. Invoices issued by the ENGINEER shall be made monthly / upon completion of project with payment by the CITY being made within 30 days upon receipt of undisputed invoice.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called "CITY" and Parkhill, Smith & Cooper, Inc., of 333 Rio Rancho Blvd NE, Ste 400, Rio Rancho, NM, 87124, hereinafter called "CONTRACTOR".

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment "A") during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY'S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY'S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR'S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR'S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Parkhill, Smith & Cooper, Inc. 333 Rio Rancho Blvd NE, Ste 400 Rio Rancho, NM 87124 ATTENTION: Mike Ramirez

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

Las Cruces, NM 88001

Re: **RFQ # 23-24-051 | City of Las Cruces General Engineering Services**

Dear Selection Committee:

We appreciate your trust in Parkhill and look forward to continued years of success through this latest RFQ for General Engineering Services On-Call. Our capable and enthusiastic local staff is here to research, document, plan, design, and represent the City of Las Cruces during the construction phase. Not only do we provide exceptional civil engineering services, our multi-discipline firm can also provide architectural, mechanical, electrical, automation (SCADA), structural, interior design, and landscape architecture if the needs arise.

Parkhill has an ongoing, hard-working history in the area. We have planned and designed many projects in Las Cruces including the NMSU Residence Hall currently in construction, the Lakeside Subdivision Water Project, the Downtown Revitalization Project and the Foothills Landfill Closure Project. We have provided thousands of solutions in our 75+ years of tenure in the southwest.

Parkhill has worked in and around New Mexico since 1949. We completed a City of Clovis Zoning Plan, General Drainage Plan, as well as a Sewage Treatment Plant Expansion. We have designed water treatment facilities in Alto, NM, performed upgrades to the wastewater reclamation plant in Hobbs, NM, created a new high school in Jal, NM along with many other NM projects.

We have been recognized for our efforts with multiple industry specific awards throughout our expansive portfolio. Parkhill continues to be rated among the Top 500 Design Firms in the nation according to the Engineering News-Record (ENR) 25 years in row and counting. Parkhill is currently ranked number 256 in the nation. Eighty-five percent of our active projects are with repeat clients, which displays our willingness to do whatever it takes to maintain good client relationships on a professional and personal level.

Enclosed is a presentation of our credentials for your consideration. We have the expertise, experience, and manpower necessary to make this a successful venture. We know Las Cruces to be a wonderful place serving as home for some and a popular destination for others here at Parkhill. We look forward to partnering with you to make it even better.

Thank you for your time and consideration.

Sincerely,

Michael Ramirez, PE, CCM
Principal-in-Charge

Parkhill

TECHNICAL APPROACH

Understanding of the Scope of Work

The City of Las Cruces is planning to contract Engineering Consulting Services for miscellaneous assignments not covered within the scope of a defined project. For each assignment given, Parkhill will develop a technical approach that is pertinent to the particular assignment. Each assignment will likely have unique features, however some features are similar regardless of the type of assignment. Common features to most projects could include:

1

PROBLEM IDENTIFICATION

The particular features of the assignment will be discussed via conference with the City in order to create a solution that fulfills the overall objective.

2

PERSONNEL ASSIGNMENT

We will assign a project manager and the appropriately experienced personnel to accomplish the assignment.

3

SCHEDULE AND SCOPE DEVELOPMENT

We will develop a project schedule to aide in timely completion of the project throughout the design and construction phases. The schedule will include time constraints and budget criteria established by the City.

4

INVESTIGATION

Investigating the existing conditions in the project area is a critical task that will be performed before any design is attempted. It is important to determine the impacts of existing conditions prior to beginning design of the project.

5

DESIGN

After the preliminary investigation is completed, including a Study/Report document if so required by the assignment, Parkhill will conduct the design phase and preparation of bid documents.

6

BIDDING

Once the design is completed, Parkhill will assist the City with the bidding process, including review of contractor qualifications when a construction project is included.

7

CM AND RPR ASSIGNMENT

We believe that a knowledgeable Construction Manager (CM) and Resident Project Representative (RPR) are crucial to the successful completion of a construction project. Once a contractor has been selected, when authorized, Parkhill will assign one or more appropriately experienced CM(s) and RPR(s) depending on the size and complexity of construction.

8

CLOSE-OUT

After construction is complete, Parkhill will prepare the close-out documentation of the completed project, including preparation of the “Record Drawings” for City files.

Studies and Reports

Parkhill will perform the consulting services required to prepare studies and reports providing the City a clear and coherent solution. These studies and reports will be based on research and database creation to include investigations, drawings, sketches and the engineer's opinion of probable construction costs. It is essential to know the extent of work required as well as the budget required for construction. In preparing these studies and reports, we will perform drainage studies, master drainage plans, feasibility studies, structural analysis, design analysis and other studies required for the particular project. It is important that the reports include the alternatives considered, conclusions and recommendations, to arrive at a desired alternative that addresses the problem while offering the most economical solution. In the preparation of studies and reports for projects, we begin with an overview of the problem to be solved. The preliminary investigation of the project provides differing solutions considered alternatives. The objective is to eliminate alternatives that do not meet the criteria required to address the problem. Using the process of elimination, the preferred alternative will be identified.

Preparation of Plans, Specifications, and Opinions of Cost

After the study/report for a particular project has been completed and approved by the City, plans and specifications will be prepared to include a more detailed opinion of probable construction cost allowing the City to bid the project for construction.

Preparation of Plans, Specifications, and Opinions of Cost for Design of Buildings, Structures and Similar Construction

Parkhill offers the City of Las Cruces a complete Architectural Division with considerable experience in the design of buildings, structures and similar construction. In addition, we have registered architect representatives on staff. We not only perform the architectural design, specifications, and opinion of construction costs, but we also have electrical and mechanical engineers that provide the designs that are required for assignments of these types.

Constructibility, Biddability, Operability Reviews and Value

Occasionally, during the construction phase of a project conflicts between what is designed and what can be physically built are discovered. Discoveries like this can be avoided or minimized by performing reviews that check for constructability, biddability, and operability of a project prior to bidding. Parkhill will perform reviews of the plans and specifications for any inconsistencies such as details, notes, references, and coordination among the disciplines involved in the project. Instances do exist where the plans detail items for construction that have been omitted from the specifications and vice versa. Such inconsistencies make it difficult for contractors to respond with a proper bid. These occur more often in projects where several engineering consultants have been used. Parkhill is able to mitigate these types of inconsistencies with out multi-discipline company approach. Another method of dealing with this issue is to perform a cost-efficiency or Value Engineering study on a project design. Parkhill is familiar with this concept, having been involved in many projects where this kind of study was performed.

Full-Time Project Representative

One of the keys for a successfully constructed project is to have qualified, full-time project representatives on-site for observation of the work being performed by the contractor. The full-time project representative provides guidance to the contractor in following project plans and specifications. The result of having a full-time project representative is a properly executed project that conforms with the drawings and specifications. Parkhill has on-staff personnel that are experienced and qualified to perform these services in the areas of civil engineering construction as well as building or vertical construction. Our Resident Project Representatives (RPRs), are under the direction and supervision of our Licensed Professional Engineers and Construction Managers (CMs).

Review of Shop Drawings, Materials, Fixtures, and Equipment

It is very important that, before installation, the contractor submit for review the types of equipment, materials, and fixtures to be used to determine whether they comply with the specifications for the project. Parkhill will perform the necessary reviews and make recommendations regarding materials compliance with specifications. Materials that do not comply will be rejected, requiring resubmittal by the contractor.

Meetings and Conferences

Communication is an important element in the success of any project. It is essential the proper channels of communication are established and followed by all parties involved. Parkhill will attend and participate in design conferences to review the progress of work during the design process and, when authorized, during the bidding and construction phases. Parkhill will be available to meet with the City when requested during the contract duration to discuss questions and concerns. We will also prepare meeting minutes to provide a record of what was discussed and decisions that were reached. Copies of the minutes will be distributed to those involved in the assignment.

Project Manager

Proper coordination and communication during your projects will be secured with a single individual acting as the point of contact between Parkhill and City personnel. The Project Manager will be responsible for coordination of the in-house activities of our personnel during the performance of a work assignment. They will also be responsible for the internal control and review procedures that will be followed to minimize conflicts, errors, omissions, and to provide for technical accuracy of the design. Additional responsibilities will include keeping the City informed of the activities being performed.

Prepare Cost Opinions

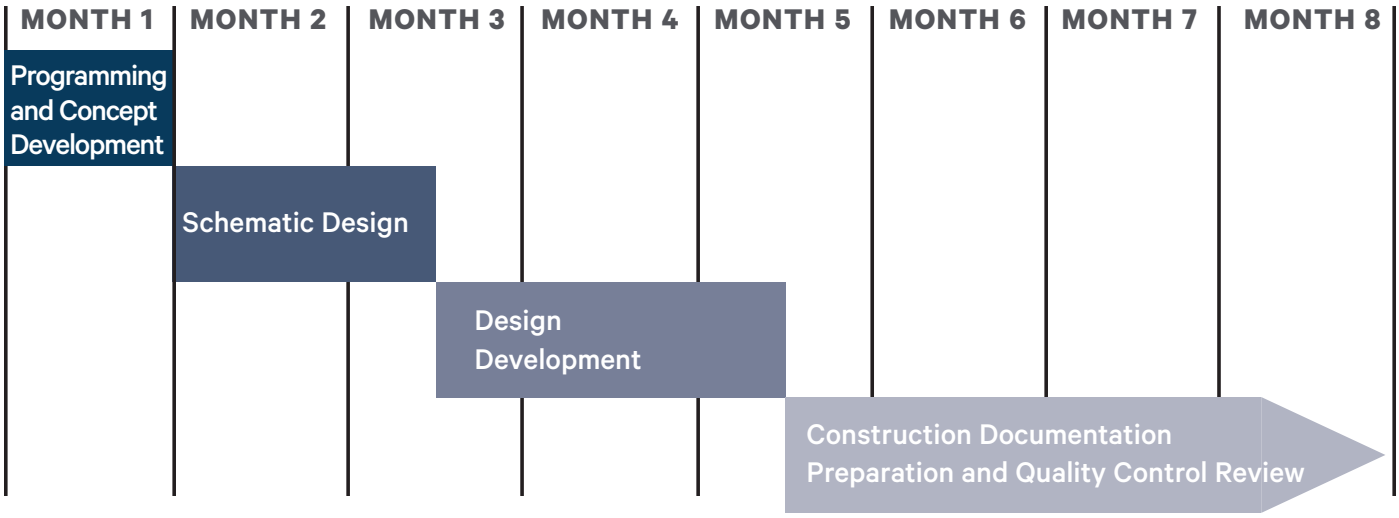
Parkhill has a team of cost opinion specialists. Each of these individuals brings years of experience in preparing opinions of probable costs for a wide variety of project types in a wide variety of locations. For each civil engineering project, we will select personnel that have developed opinions of cost for Las Cruces municipal projects. Our personnel are very talented in this arena and provide great attention to detail. In a 2004 street and drainage project for the City of Las Cruces, the low bid was 14% lower than Parkhill's cost opinion for the Ramona Avenue and Thomas Place Street and Drainage project and was in the middle of the four contractor bids received for the project. For the Northeast Regional Park project, the low bid for the base bid and three additive alternates was within 1.9% of Parkhill's cost opinion. The highest of the four bids received was only 4.0% above Parkhill's cost opinion. The project budget allowed award of the base bid and all additive alternates. Currently, the Parkhill Team prides itself in maintaining a 3.5% over/under variance in our opinions of probable costs over the past five years.

Other Civil Engineering Services

The need for additional professional services beyond those specifically listed in the Scope of Services is available at Parkhill.

Schedule

Parkhill believes that establishing a project schedule and timeline for our projects is a key element of our success. Once the project has been discussed between our different disciplines as well as with contractors and subcontractors, we develop a much more detailed schedule. This schedule is used to keep the client informed on project progress as well as hold all of the project team members accountable to their individual time expectations. As there is no specific project listed for this RFP, the below basic timeline is our starting point from which we insert additional details as needed.



Parkhill

MIKE RAMIREZ, PE, CCM | Principal-in-Charge

P: 915.543.3336 | E: mramirez@parkhill.com

Mike Ramirez, PE, CCM, is a Principal and the Director of Construction Services. He brings 20 years of engineering experience with an emphasis on large-diameter pipelines, pumping facilities, GIS applications, collection and distribution modeling, and the planning, design, and construction of water and wastewater projects. He has managed the planning, design, or construction of over 100 miles of pipeline projects in the last 10 years, ranging in size from 6" to 90." He was Principal-in-Charge of the ACEC Gold Medal award-winning El Paso Water Canal Tunnel project.

NOTABLE PROJECTS

Las Cruces Downtown Revitalization
After changes in staff on the project, Mike took over as Principal-in-Charge to complete the final design stage of the project and through construction. Mike was charged with resource management to allocate staff at multiple levels and disciplines to complete the project.

Pre-1965 Foothills Landfill Closure
Mike is the sector director of the firm's Construction Phase Services and Construction Management sector. He provided general oversight of the staff including document control processes and procedures as well as staff scheduling and training.

MATT KINGSLEY, PE | Project Manager

P: 505.504.7758 | E: mkingsley@parkhill.com

Matt Kingsley, PE, is a Principal and Civil Engineer with Parkhill's Environmental Sector in Albuquerque. He is a professional in landfill and transfer station operations, design, and construction. He has operated and developed over 10 Transfer Stations across the United States, in both arid and sub-tropical climates. Through Matt's diverse engineering design and operational experience, he has provided valuable insight for many of our clients. This has recently included operations consulting to both Sandoval County and the City of Albuquerque, two of the largest waste generators in New Mexico.

Corralitos Landfill Cell 5 Design and Construction
Matt served as the Senior Project Manager for the design and construction of Cell 5. This included senior review of the initial design for submission to the NMED as well as assistance in the selection and procurement of a well qualified earthworks contractor.

Corralitos Landfill Cell 4 Design and Construction
Matt served as the Senior Project Manager in reviewing the construction of Cell 4, the collection of certification data, and final review of the engineering certification report.

Parkhill

JON BRAUDT, PE | Roadway

Jon Braudt, PE, is a Project Manager located in the Amarillo office. Prior to college Jon spent two years working for an asphalt paving company and gained hands on experience with cement and lime reconstruction. During college, he operated his own parking lot striping business working on nights and weekends during school semesters. Since college, he has over 17 years of experience in civil engineering for the industrial sector and Has a natural skillset for industrial site development. His site development experience includes designing DOT entrances, paving section design, roadway access layout, storm sewers and detention ponds. Jon also served as the Seal Coat program coordinator for Parkhill's 2020, 2021,and 2022 seal coat programs.

Mesalands CC Campus-wide Sitework Improvements

Jon served as the Project Manager for a range of campus flatwork and utility improvements across the grounds for four of Mesalands Community College's seven campus buildings in Tucumcari, NM. He was responsible for designing paving renovations and site drainage improvements. He also oversaw design efforts for new elevated pedestrian crossings, landscape improvements, and new site illumination across the campus.

Shallowater 10th Street

Jon designed multiple concrete driveways and an extended concrete drainage flume to alleviate drainage issues for 10th Street in the City of Shallowater, TX. He also designed the cement stabilized reconstruction of 10th Street's roadway structure and surface.

SHAUN TIDWELL, PE | Electrical Engineer

Shaun Tidwell, PE, is a Senior Associate and a member of Parkhill's Water Resources Sector. His experience includes designing power systems for water pump stations, sewage lift stations, and water/wastewater treatment plants. He is also familiar with back-up generator systems design. Shaun has also designed several lighting projects including street lighting, highway lighting, high mast lighting, parking lot illumination, and city park illumination. He has an in-depth knowledge of lighting standards set forth by the Illuminating Engineering Society of North America (IESNA), and El Paso Electric Co. Service Requirements.

NOTABLE PROJECTS

Las Cruces Downtown Revitalization

Shaun led the electrical design for the roadway lighting and callesita improvements. He coordinated with other disciplines to identify obstacles and challenging roadway geometry to provide continuous roadway lighting and enhanced lighting levels at roudabouts, intersections and pedestrian corridors.

Hawkins Boulevard Reconstruction

Coordinated with Electric Utility for line relocations, performed lighting calculations, reviewed field light placements, and led electrical design team in construction drawings and specifications.

Parkhill

JOHN PASS, PE | Structural Engineer

John Pass, PE, is a member of the Structural Team in Parkhill's MEP/Structural Sector. John has nearly 40 years of experience in structural engineering. During his time with Parkhill, he has been the lead structural engineer for numerous educational projects including schools for the Socorro ISD, Ector County ISD, Reagan County ISD, and New Mexico State University. His experience before joining Parkhill includes a variety of high profile projects like the War Eagles Museum in Santa Teresa, New Mexico and the ANCOR Pulsed Fast Neutron Analysis Building for the Department of Defense at the Ysleta Port of Entry in El Paso, Texas.

NOTABLE PROJECTS

Las Cruces Callesitas Project

John designed and detailed the supporting structure (columns and drilled piers) used to support the cables support the hanging lights and signs. In addition, he designed and detailed the various seat and shade canopy frame arrangements as well as numerous miscellaneous attachment details and access ports needed on the columns.

Las Cruces Utilities Warehouse Interior Structures Load Review

John was asked to determine maximum loading limits for all of the various wood framed structures that had been constructed within the warehouse proper. At the time, the City of Las Cruces required load limits to be posted for elevated framed areas to include offices, meeting rooms, storage areas, break rooms, etc. as well as for any miscellaneous elevated floors and ceiling/roof framing that was being used for storage purposes.

TYLER ZACK, PE | Solid Waste

Tyler is a Civil Engineer in Parkhill's Environmental Sector. He has been involved in the design and construction oversight for several Landfills throughout New Mexico and has extensive experience in environmental monitoring and compliance for the Solid Waste Industry throughout the State. He has also played a key roll in the development of stormwater pollution prevention plans (SWPPP) for more than 15 facilities across New Mexico. He is actively involved in the Solid Waste Association of North America (SWANA) and is a member of the New Mexico SWANA Roadrunner Chapter. Tyler also participates in select events with the Texas Lonestar Chapter of SWANA.

NOTABLE PROJECTS

Pre-1965 Foothills Landfill Closure
Andy was the Project Manager for Parkhill. Responsible for subcontractor scheduling and coordination dealing with traffic control, utilities clearance, security rental, site amenities, laboratory testing, and final Completion Reporting to the NM Environment Department.

Former City of Truth or Consequences Landfill - Replacement Groundwater Well Installation and Decommission
As project manager and geologist, Andy proposed, oversaw in the field, and wrote the final installation report for submittal to the New Mexico Environment Department Groundwater Quality Bureau for the installation of three new monitoring wells and the plugging of two dry wells.

Parkhill

DEAN LACKEY, PE | SCADA

W. Dean Lackey, PE, serves as Parkhill's lead Control Systems Engineer in the Water Resources Sector. Licensed in New Mexico, Texas, and Oklahoma, his education and experience provides a unique understanding of processes. Dean provides clients with complete industrial automation solutions primarily in water and wastewater. His solutions include SCADA, instrumentation, process control, PLC programming, HMI development, P&ID, industrial communication platforms, access control, CCTV, system start-up services, field inspection, and any other requirements dealing with automated or specialty subsystems.

EDUCATION

New Mexico State University
Bachelor of Mechanical Engineering Technology

NOTABLE PROJECTS

Alto Lakes 300K GST and Treatment

Dean designed the instrumentation and automation systems for a new water treatment facility and ground storage tank. He programmed and commissioned the system to automatically operate. This new system was then integrated by him into Alto's existing SCADA system.

Hobbs Waste Water Reclamation Facility

Dean has performed multiple automation tasks at the facility. One of those efforts involved on-line modifications to an existing automated sequence. He was able to utilize current measurements to automatically adjust inlet valves on blower units alleviating nuisance faults of the VFD drives based on seasonal and weather related ambient air pressure variances.

ISAAC AGUILAR, PE | MEP

Isaac Aguilar, PE, is a Principal and Electrical Engineering Group Lead in Parkhill's MEP/Structural Sector. His experience includes lighting, power, communications, and fire alarm designs for various project types, including educational, healthcare, municipalities, and institutional facilities. Isaac has designed emergency backup generators for healthcare facilities, data centers, airports, booster stations, and chiller plants. Isaac provides facility assessments on electrical systems to determine the current condition and provides recommendations.

LAS CRUCES DOWNTOWN CALLESITA SHADE STRUCTURES

City of Las Cruces | Las Cruces, NM

As a part of the downtown Las Cruces revitalization project, Parkhill worked with the City of Las Cruces to design three pedestrian centered callesitas at May Avenue, Hadley Avenue and Court Avenue. The overall design for the callesitas turned 'back alley streets' into pedestrian accessible plazas encouraging downtown walkability, an enhanced business presence and revitalization to the heart of downtown. Each callesita carried its own unique theme, i.e. farming, railway and acequia, but they were all three made congruent using similar hardscape and softscape materials, site fixtures, and the integration of custom shade structures. The custom shade structures, designed by Parkhill engineers and architects, integrated custom poles with integrated seating, shade, lighting, power receptacles and fabric structures tensioned to the poles. Due to project budget constraints, only half of the poles, benches, and shade covers were constructed.

In 2023, the City contracted with Parkhill to prepare construction documents for the remaining shade structure design elements in each callesita and assist with bidding and construction administration for the shade structures. Upon construction completion, each callesita will include seven 18-foot tall pole systems, two steel shade canopies with benches, and five shade sail systems.

The completion of the shade structures will fulfill the City's vision for the downtown callesitas by providing an inviting, walkable, pedestrian centric downtown which provides an architecturally enhanced perspective to shade integration.

LAS CRUCES DOWNTOWN REVITALIZATION

City of Las Cruces | Las Cruces, NM

Parkhill worked with the City of Las Cruces to improve its downtown via the conversion of one-way streets into two-way pedestrian friendly streets using NACTO design guidelines. Several years of planning, public involvement, stakeholder coordination, traffic studies, regional growth studies and pedestrian walkability reports indicated the one-way to two-way conversion would revitalize Downtown Las Cruces spurring economic growth and attracting pedestrians into the City's central hub. The design involved street design, improvements to alleyways with architectural elements meant to provide an inviting and safe atmosphere where people can gather and interact, traffic signals, landscaping, illumination, and utility design. Aesthetic improvements included colored and stamped sidewalks, street trees, landscaping and aesthetic light poles.

Pedestrian friendly elements consisted of wide sidewalks and curb extensions for improved safety and aesthetics. Green infrastructure was implemented into the curb extensions as alternate bid items. The area's aging utility infrastructure was also replaced, providing enhanced lighting to the Callesitas and power for food trucks to attract visitors.

Additional lighting improvements included evaluating the existing street lighting and relocating pole to provide better coverage on the roadway and at pedestrian crosswalks. Decorative lighting was added on Main, Griggs, and Las Cruces to match existing lights installed under previous projects and provide a safe and accessible area for pedestrians. All of the lighting is dark-sky compliant. Traffic signals were reconfigured to accommodate the two-way traffic flow and additional pedestrian lighting was added in these locations.

PRE-1965 FOOTHILLS LANDFILL CLOSURE

City of Las Cruces | Las Cruces, NM

A property located in eastern Las Cruces, New Mexico, was a disposal site for municipal waste until 1965. Waste at the site was covered with soil, and the property has been environmentally stressed and limited in use since. At the time of waste disposal, the site was located well east of the City of Las Cruces. Over the years, Las Cruces has grown eastward and engulfed the site. The city disposed of municipal waste at the site under terms of a lease with the Bureau of Land Management and has since acquired the 160-acre property with the intent to restore the site to a "no environmental stress" status to allow development. The City is removing and transporting the waste to South Central New Mexico Solid Waste Authority's Corralitos Landfill, located about 20 miles west of Las Cruces. Waste disposal practices at the pre-1965 Foothills Landfill were primitive. Wastes were not placed in excavated regularly-shaped cells but were deposited on existing land surface in low-lying areas, generally next to or inside arroyos. As wastes were placed, soil from the adjacent arroyo banks was pushed downhill over the wastes. The resulting buried waste bodies are irregular. Test borings and potholes were advanced to allow estimates of the thickness and lateral extent of wastes. The City of Las Cruces chose Parkhill to assist with planning, permitting and site operations to excavate approximately half of the waste (Phase 1, Areas 1-3). Parkhill's assistance with Phase 1 began with preparing projections of waste volumes and geometry, estimating project costs and preparing a waste excavation plan approved by the New Mexico Environment Department. Parkhill currently supports site excavation with updated waste delineation, air quality monitoring, excavation base soil sampling for clean confirmation, documenting the project progress, keeping the client informed and ensuring a successful project. Parkhill anticipates follow-up assignments for waste characterization, excavation planning and site support services for Areas 4-5 (Phase 2). The project will result in a significant area in eastern Las Cruces being transformed from an environmental liability to a valuable real property, will profit the City monetarily and will improve quality of life for Las Cruces residents.

CORRALITOS REGIONAL LANDFILL

South Central Solid Waste Authority | Las Cruces, NM

Parkhill has served as the primary design engineer for the South Central Solid Waste Authority's Corralitos Regional Landfill for more than seven years. During this time, Parkhill had developed Construction Plans, Project Specifications, and bid documents for approximately 30 acres of geosynthetic lined landfill Cells (Cells 4 and 5). These documents we developed based on industry standard design practices and satisfy the requirements of the Landfill's approved Solid Waste Permit and all relevant New Mexico Administrative Code (NMAC) rules and regulations.

Parkhill not only provided the engineering design services for the two landfill cell construction projects, but also offered Construction Quality Assurance during all phases of construction for both projects ensuring that all installed materials meet stringent industry standards and requirements outlined in the Project Specifications and the facility's permit. Parkhill is currently working with both the South Central Solid Waste Authority and industry leading contractors to complete the construction of Cell 5 which will provide the Landfill with an additional seven to eight years of airspace to facilitate solid waste disposal for the City of Las Cruces and surrounding Dona Ana County. Following the completion of Cell 4 construction activity, Parkhill also prepared the Engineering Certification Report for submittal and approval by the New Mexico Environment Department Solid Waste Bureau.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called "CITY" and Miller Engineers, Inc. dba Souder, Miller & Associates, of 3500 Sedona Hills Parkway, Las Cruces, NM, 88011, hereinafter called "CONTRACTOR".

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment "A") during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY'S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY'S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Miller Engineers, Inc. dba Souder, Miller & Associates 3500 Sedona Hills Parkway Las Cruces, NM 88011 ATTENTION: Paul J. Pompeo

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

City Attorney

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

RE: SUBMITTAL OF PROPOSAL FOR CITY OF LAS CRUCES, "GENERAL ENGINEERING SERVICES", RFP NO. 23-24-051

Dear Members of the Selection Committee:

The following proposal is in response to the City of Las Cruces RFP No. 23-24-051 entitled "General Engineering Services." Miller Engineers, Inc. d/b/a Souder, Miller & Associates (SMA) has prepared this response in strict accordance with the written RFP issued by the City. SMA has received Addendum No. 1.

SMA has reviewed the RFP and is familiar with the City's policies, procedures, and conditions, ***having provided consulting services on numerous projects for the City using local staff for more than 29 years. SMA has provided on-call and standalone consulting services directly to the City on current and past contracts, and as a subconsultant to other firms for City projects. These include recent and ongoing projects, such as the NASA Road High Pressure Gas Line Replacement Project, the Zone 1 Interconnect Phase B Project 2, the Telshor and Lohman Storm Drain Repair Project, and the RoadRUNNER Transit Operations & Maintenance Facility.***

SMA has over 175 employees ***(more than 45 based in Las Cruces)***, including more than 35 registered professional engineers ***(seven in Las Cruces)***, registered professional surveyors and geologists, construction observers, and certified water and wastewater system operators ***in-house*** and has completed hundreds of infrastructure improvements projects, many of these with time limited completion schedules to meet funding deadlines. ***Several of SMA's project team members have developed a close working relationship with City staff members, based on clear communication and attention to the City's needs and wishes.*** Our proposed project team is prepared to move forward immediately when given notice to proceed.

Our local Las Cruces office, where all project management and field work will be performed for the City's projects, has served southern New Mexico for nearly 30 years, providing a stable and dependable foundation on which our valued clients can rely. This stability and continuity have allowed SMA to provide the highest-quality services to successfully complete each project while meeting and exceeding our clients' expectations. Our data gathering and design process focuses on client involvement, allowing the attention to detail afforded by a small firm and the depth of experience and resources of a large firm. We also have very good channels of communication with the different agencies of the State of New Mexico and Doña Ana County, which will prove instrumental for timely completion of projects under this contract.

On behalf of the entire SMA project team, we look forward to continuing our valued relationship with the City of Las Cruces and appreciate your consideration of our proposal. If you have any questions about this proposal or would like to meet at your convenience to discuss this project, please feel free to contact the undersigned via the email or phone number provided below.

Sincerely,

1. Technical Approach

Company Introduction

Miller Engineers, Inc. d/b/a Souder, Miller & Associates (SMA) appreciates this opportunity to propose to the City of Las Cruces (City) to provide General Engineering Services as described in the City's RFP No. 23-24-051. ***The SMA project team is structured to provide the City with the highest quality services using experienced professionals all coordinated from SMA's nearby Las Cruces office with more than 45 local staff members.***

SMA is an incorporated, New Mexico-based, employee-owned engineering, environmental and surveying consulting firm serving clients throughout New Mexico and the entire Mountain West region. Our project team emphasizes close working relationships and frequent interaction, allowing us to provide the highest quality product tailored to our client's needs while closely managing project costs and timelines.

The SMA Las Cruces office was established in 1995 to serve southern New Mexico. Since then, this office has grown to more than 45 employees, making it one of the largest engineering/ environmental consulting offices in southern New Mexico.

SMA offers comprehensive professional services including planning facilitation, asset management, preliminary and final project design (including any necessary environmental support, surveying, and right-of-way acquisition), regulatory plan reviews, bid administration, permitting, construction administration, construction observation, and support services, including grant administration and funding applications.

SMA has successfully completed similar on-call and standalone civil engineering design work with numerous municipal clients on projects throughout the state, including the City of Las Cruces. Our project team members are well-versed in the requirements of various regulatory agencies anticipated to be involved, including the City of Las Cruces, Doña Ana County, and the different agencies of the State of New Mexico.

SMA will provide all project management; engineering planning, analysis, and design; environmental documentation; expert witness services; and construction observation services in-house. In order to provide the highest quality services and technical diversity to the City of Las Cruces, SMA has enhanced its project team with Bath Group, Inc. (Bath) for supplemental computer network analysis, Southwest Engineering, Inc. (SEI) for geotechnical assessments and soil & groundwater testing, Sites Southwest, LLC (SSW) for supplemental master planning services, DCE Environmental, Inc. (DCE) for supplemental environmental investigation services, The Response Group (TRG) for SCADA system design, and Raxis Engineering (Raxis) for mechanical, electrical, gas, plumbing, and HVAC design. SMA has regularly teamed with each of these firms on several projects over the past 25+ years to complement each firm's strengths.

Technical Approach for Work to be Performed

While there are no specific projects listed in the City of Las Cruces RFP, SMA understands the City's ongoing needs for infrastructure improvements within each of the listed services by virtue of prior City-assigned projects. SMA has reviewed the RFP, and our project team members have met with City staff to discuss the current and long-term needs of the community. The following information outlines SMA's approach to each project.

While SMA has a successful project completion track record, we strive for continuous improvement. As part of that effort, SMA's project manager prepares a Project Management Plan (PMP) to guide the project execution and control and to document the team's approach to communicating with the client and managing risk. To ensure a solid company performance on the project, weekly operations meetings provide project managers the opportunity to present information to senior staff regarding project performance; scope; client needs; and resource availability. In addition, project managers schedule periodic meetings with each of the task managers to verify that assignments are being completed on schedule. Ultimately, the project manager communicates the progress of the project to the client and stakeholders.

Project Kick-off Meeting
For each new task order, SMA conducts internal kick-off meetings to coordinate and begin work on project-specific processes. The purpose of the kick-off meeting is to define the following:

Project-specific goals	Schedule of client progress reports and design reviews	Major design milestones
Schedule of internal design reviews to meet milestones	Timelines and budgets	Critical path issues that will control the schedule

Coordination and Status Review Meetings
The SMA team believes that regular communication and feedback are critical for success. During the contract period, SMA conducts regular meetings with and provides written updates to the City regarding the progress of the project. Whether formal or informal, SMA reviews the work product, cost estimates and project schedule with the City to ensure that the project goals are being met. Finally, SMA keeps in regular contact with regulatory and funding agencies, as well as contractors and sub-contractors. Working closely with the City to incorporate feedback and ideas enhances the quality of work.

Quality Assurance/Quality Control (QA/QC)
SMA places a high value on producing quality products, which we accomplish by following our QA/QC program that focuses on staff training and management involvement to ensure that all technical, scheduling, and budgetary requirements are met. Each project is initiated with a startup meeting where responsibilities for all staff members involved are clearly defined. During the life of the project, regular progress review meetings are conducted between all project staff to maintain the designated schedule, highlight any changes in scope, and identify and correct any delays or problems. A key value provided by SMA is data and report validation, which we accomplish through independent review of final reports by senior and project level staff other than the author.

2. Qualifications/Competence

SMA has identified a specialized planning and design team that includes several local professional engineers to work with the City. While all of the company resources, including more than 35 New Mexico registered professional engineers statewide, are at the disposal of the City, the table on the following page outlines the primary responsibilities of key members, ***all of whom have provided similar services for municipalities throughout southern New Mexico, including current and past projects for the City of Las Cruces.*** Resumes for primary Senior team members in charge of direct project management follow the table.

Service	SMA Key Personnel or Subconsultant	Location
Master Planning	Paul Pompeo, P.E. SSW *(Subconsultant as needed)*	Las Cruces Albuquerque
Structural Design	Hunter Riek, P.E.	Albuquerque
Roadway, Transportation, and Parking Lot Design	Matt Nighbert, P.E.	Albuquerque
Site Development	Paul Pompeo, P.E.	Las Cruces
Computer Network Analysis – Water Wastewater Gas	Robert Storey, P.E. Robert Storey, P.E. Bath *(Subconsultant as needed)*	Las Cruces Las Cruces El Paso, TX
SCADA Design	TRG *(Subconsultant as needed)*	Albuquerque
Mechanical, Electrical, Gas, Plumbing, and HVAC Design	Raxis *(Subconsultant as needed)*	Las Cruces
Water, Wastewater, and Natural Gas Utility System Design and Analysis	Marty Howell, P.E. Robert Storey, P.E.	Las Cruces Las Cruces

Service	SMA Key Personnel or Subconsultant	Location
Traffic Impact Studies; Transportation Modeling Studies	Michael Johnson, P.E.	Las Cruces

Drainage Studies / FEMA Flood Studies	Paul Pompeo, P.E.	Las Cruces
Storm Drainage Design	Paul Pompeo, P.E.	Las Cruces
Solid Waste Studies; Landfill System Design & Analysis	Scott McKitrick, P.G.	Albuquerque
Environmental Surveys, Assessments, Monitoring, and Management Indoor Air Quality, Asbestos, and Mold	Niki Harings, Ph.D. DCE *(Subconsultant as needed)*	Las Cruces Albuquerque
Geotechnical Assessments; Soil & Groundwater Testing	SEI *(Subconsultant as needed)*	Las Cruces
Expert Witness Services	All Task Leads as applicable	TBD
Project Management	All Task Leads as applicable	TBD
Construction Inspection	Richard Bustos	Las Cruces

Key Personnel - Experience and Expertise

The following bios outline the experience, professional designations, areas of special expertise and areas of competence for each of SMA's key team members. Our Project Manager and primary Task Leads are based in (and residents of) Las Cruces ***and collectively represent well over 100 years of specific engineering experience in Las Cruces.*** For space considerations, this listing only includes Senior level personnel in charge of management for the project services. Additional information on all listed staff, including full resumes, is available on request.

Percent of Time Assigned to the Project: Up to 20%

Paul J. Pompeo, P.E. | Principal-in-Charge / Project Manager / Task Lead - Master Planning, Site Development, Drainage Studies/FEMA Flood Studies, Strom Drain Design

B.S. - Civil Engineering
Professional Engineer - New Mexico (#11490)

Areas of Expertise and Competence

Storm Drainage, Utilities, Site Development, Drainage Reports/FEMA Flood Studies, Expert Witness, Project Management

Responsibilities and Experience

Mr. Pompeo has more than 30 years of experience as a Professional Civil Engineer with an emphasis in public works, residential, commercial, and industrial project design and development. His project experience includes total project oversight from the conceptual phases through final construction inspection. Designs have included grading plans, roadway plan & profile design, drainage plans, utility plans, geotechnical investigations, pavement design and project specifications. Following the design phase, Mr. Pompeo oversees the submittal of project documents to jurisdictional governmental agencies and private utility companies for review, approval and permitting.

Representative Past Projects

- City of Las Cruces NASA Road High-Pressure Gas Line
- City of Las Cruces Telshor & Lohman Storm Drain
- City of Las Cruces Walking, Jogging, Biking, and Recreational Trails
- Sonoma Ranch Master Plan Communities
- City of Las Cruces Design-Build Parks and Sports Courts Rehabilitation
- City of Las Cruces Design-Build Recreational Trails
- Three Crosses Regional Hospital & MOB Development
- Sierra Norte Master Plan Community

Percent of Time Assigned to the Project: Up to 15%

Matt Nighbert, P.E. | Senior Engineer / Task Lead – Transportation Facility Design

B.S. - Civil Engineering
Professional Engineer - New Mexico (#19479)

Areas of Expertise and Competence
Transportation Facility Planning & Design, Expert Witness, Project Management

Responsibilities and Experience
Mr. Nighbert's responsibilities as Senior Engineer and Transportation Technical Sector Director include coordinating the preparation of plan sets from project initiation to completion. Project-specific tasks include facilitating the geometric design of roadways and roadway sub-elements, verifying that existing environment elements are accounted for in the designs, coordinating the efforts of sub-consultants and incorporating subconsultant data into plan sets or client deliverables, and making certain of the completion of engineer's opinions of construction cost. Technical consultation tasks include relating project requirements and project types to the best methods to accomplish project designs.

Representative Past Projects

- City of Albuquerque Bikeways and Trails Master Plan Update
- Town of Mesilla La Llorona Multi-Use Trail Extension
- NMDOT Statewide On-Call Contracts – Multiple
- City of Hobbs West Bender Roadway & Drainage
- Bernalillo County On-Call Traffic and Transportation Multiple Contracts
- Grant County Road Certifications
- NMDOT NM 15 Silver City Phase III Reconstruction
- Mescalero Apache Tribe Inn of the Mountain Gods Bridge Replacement

Percent of Time Assigned to the Project: Up to 15%

Hunter Riek, P.E. | Project Engineer / Task Lead – Structural Design

Civil Engineering (Structural Track)
Professional Engineer – New Mexico (#23567), Arkansas, Nevada

Areas of Expertise and Competence
Structural Design, Construction Contract Administration, Project Management

Responsibilities and Experience
Mr. Riek has more than 20 years of experience in the engineering and construction industry and enjoys finding solutions through design and coordination. His experience ranges from field work to design and management of structural engineering for a variety of above-ground and below-ground projects. He has recently designed massive structures in the precast concrete industry. Mr. Riek also has extensive experience in project management, construction phase services, plan review, and stakeholder coordination.

Mr. Riek's recent project experience includes multiple building structures, elevator cores, parking garages, and retaining walls for several commercial, school, and healthcare sites throughout the state. These projects have included multiple private development sites, elementary schools in Las Cruces, and wastewater effluent treatment facilities in Carlsbad.

- Rio Salado Bridge Improvements
- Amargo Creek Bridge Improvements

Stronger Communities by Design®

Percent of Time Assigned to the Project: Up to 15%

Marty Howell, P.E. | Senior Engineer / Task Lead – Water, Wastewater, and Natural Gas Utility System Design and Analysis

B.S. - Civil/Environmental Engineering
Professional Engineer - New Mexico (#22670), Arizona, Colorado, North Dakota, Texas

Areas of Expertise and Competence
Utility System Planning & Design, Expert Witness, Project Management

Responsibilities and Experience
Mr. Howell is a Senior Engineer at SMA with more than 30 years of experience in engineering planning and design. His project experience spans a broad range of technical disciplines, providing design and management on water, wastewater, landfill, and roadway projects. Before joining SMA, Mr. Howell was the Director of Economic Development and Sustainability for the City of El Paso, TX, and prior to that was the Water Resources Operations Manager for the City of Greeley, CO. His past project experience includes design and construction of water storage, distribution, and treatment improvements; wastewater collection, treatment, and reuse; utility master planning; feasibility studies and planning for new water and wastewater system projects. Mr. Howell has worked extensively with municipalities and utility systems throughout southern New Mexico, ***including recent infrastructure improvements for City of Las Cruces.***

Representative Past Projects

- City of Las Cruces Hacienda Acres Phases 1 & 2 Sewer System Improvements
- City of Las Cruces Mesa Development Water Improvements
- City of Las Cruces WWTF Reinvestment Project Construction Services
- City of Las Cruces Zone 1 Interconnect Phase B Project 2
- City of Las Cruces Missouri Tank Rehabilitation
- City of Carlsbad Engineering On-Call
- Village of Ruidoso Multiple Water, Wastewater, and Roadway Improvements
- Town of Mesilla McDowell Road Wastewater Collection Phases 1 & 2

Percent of Time Assigned to the Project: Up to 20%

Robert Storey, P.E. | Project Engineer / Task Lead – Computer Network Analysis

B.S. - Civil Engineering (Math Minor)
Professional Engineer - New Mexico (#26569)

Areas of Expertise and Competence
Computer Network Analysis, Project Management, Utility Design

Responsibilities and Experience
As a Project Engineer with SMA, Mr. Storey's duties include utility system modeling, utility network analysis, and the development and review of construction drawings, technical specifications, and Opinion of Probable Construction Cost (OPCC) documentation for site development, water, wastewater, and natural gas infrastructure projects. He also assists in permitting and bid phase services for these projects.

Mr. Storey has worked as a research assistant at New Mexico State University, researching various water treatment methods. ***He has worked as a co-op at the City of Las Cruces Water Resources Department working with the City's water model, developed reports on the well production, water quality, and various other aspects of the City's water operations.*** He has also provided design support for structural, water, wastewater, and gas systems throughout southern New Mexico. Mr. Storey currently or has recently provided planning and design services for numerous utility system improvements projects in southern New Mexico.

Representative Past Projects

- City of Las Cruces Hacienda Acres Phase 2 Sewer System Improvements
- City of Las Cruces Mesa Development Water Improvements
- Town of Mesilla McDowell Road Wastewater Collection Phases 1 & 2
- City of Carlsbad Engineering On-Call
- City of Las Cruces NASA Road High-Pressure Gas Line
- Lower Rio Grande PWWA On-Call Engineering and Multiple Water & Wastewater System Improvements
- Garfield MDWC & MSWA Multiple Water System Improvements

Stronger Communities by Design®

Percent of Time Assigned to the Project: Up to 20%

Michael Johnson, P.E., ENV-SP | Senior Engineer / Task Lead – Traffic Impact Studies and Transportation Modeling Studies

M.B.A. – Business Administration; B.S. – Civil Engineering
Professional Engineer – New Mexico (#10751)
Environmental Sustainability Professional (ENV-SP)

Areas of Expertise and Competence
Storm Drain Design, Site Development, Traffic and Transportation Studies, Construction Contract Administration, Project Management, Construction Inspection

Responsibilities and Experience
Mr. Johnson was a former Public Works Director, Facilities Director, and City Traffic Engineer for the City of Las Cruces and has more than 35 years of public works operational, engineering design, and managerial experience. He has extensive engineering experience working with municipalities, counties, and state and federal agencies. In addition to engineering design and management, Mr. Johnson has substantial in-field construction observation experience on a variety of infrastructure improvements projects, providing him with first-hand knowledge of both sides of project work. This experience affords him a unique insight to project logistics. From his time with the City of Las Cruces, Mr. Johnson has an intimate knowledge of the design and construction of much of the City's existing infrastructure. Since joining SMA, he has provided professional consulting services for numerous projects in and around Las Cruces, including several infrastructure improvement projects for City of Las Cruces, as noted below.

Representative Past Projects

- City of Las Cruces NASA Road High-Pressure Gas Line
- City of Las Cruces Nevada Ave Green Infrastructure
- City of Las Cruces Parking Lot 7 & Restroom Building
- City of Las Cruces Walking, Jogging, Biking, and Recreational Trails
- City of Las Cruces Design-Build Recreational Trails
- Town of Mesilla La Llorona Multi-Use Trail Extension Project
- Doña Ana Walking Path Project
- Doña Ana Sidewalks and Lighting

Percent of Time Assigned to the Project: Up to 20%

Niki Harings, Ph.D. | Senior Environmental Scientist / Task Lead – Environmental Investigation

Ph.D. – Biology; M.S. – Biology; B.S. – Biology

Areas of Expertise and Competence
Environmental Investigation, Expert Witness, Project Management

Responsibilities and Experience
Dr. Harings is a Senior Environmental Scientist with 21 years of experience - 13 directly with SMA producing NEPA documents for a variety of agencies, including Federal, State, local, and tribal clients. She has managed and or participated in NEPA projects including solar farms, institutional facilities, dams and other water retention structures, linear transmission facilities, roadways, and conveyance channel projects. Dr. Harings has completed CatExs and EAs for both new and old construction. Dr. Harings will use her extensive NEPA experience in the development of any environmental services that may be required for the City's projects, ensuring all data collected is complete, concise, and correct, meeting the objective of providing sufficient information for environmental assessments to meet regulatory compliance and funding requirements.

Representative Past Projects

- Doña Ana County Flood Commission La Union Cultural Resources Evaluation
- NM General Services Department Small Homes Environmental Assessment
- Dove Creek Raw Water Reservoir Improvements Environmental Investigations
- NM GSD Behavioral Health Institute Environmental Assessment
- Spaceport America Biological Report
- Mescalero Apache Tribe – Multiple Environmental Investigations

Stronger Communities by Design®

Percent of Time Assigned to the Project: Up to 10%

Scott McKitrick, P.G. | Principal Geoscientist / Task Lead – Solid Waste Studies, Landfill System Design & Analysis

M.S. – Geology; B.S. – Geological Engineering
Professional Geologist – Utah

Areas of Expertise and Competence
Solid Waste Studies, Landfill System Design & Analysis, Expert Witness, Project Management

Responsibilities and Experience
Mr. McKitrick is the Environmental Technical Sector Director at SMA and is a highly experienced Professional Geologist with more than 33 years of experience in geology, hydrogeology, and environmental engineering. His responsibilities include oversight and quality assurance of a wide range of environmental and engineering support projects, as well as water supply and environmental projects throughout New Mexico. Projects have included landfill cell design and construction, cell closure design and construction, permitting of new solid waste facilities, renewal and modification of solid waste operating permits, general regulatory compliance at landfills, investigation and documentation of geology and hydrology at landfill facilities, completion of investigation and design for corrective actions (groundwater remediation) at landfills, financial assurance calculations for annual reports, leachate monitoring and reporting, and solid waste master plans. Mr. McKitrick is currently Senior Manager for the Taos Regional Landfill, City of Roswell Municipal Landfill, and closed Las Vegas Landfill. He provides senior project management, regulatory review and interpretation, permitting assistance, interaction with NMED-SWB staff, and quality assurance/quality control for a variety of solid waste projects.

Representative Past Projects

- Village of Ruidoso Solid Waste Master Plan
- Roswell Municipal Landfill Multiple Solid Waste Services
- Otero-Greentree Regional Landfill and Transfer Station Multiple Projects
- Taos Regional Landfill Multiple Solid Waste Services
- Catron County Multiple Landfill Monitoring and Closures
- City of Deming Multiple Landfill and Solid Waste Services
- City of Tucumcari Multiple Landfill Services
- City of Las Vegas Landfill Multiple Solid Waste Services

Percent of Time Assigned to the Project: Up to 15%

Richard Bustos | Senior Resident Project Representative / Task Lead – Construction Inspection

A.S. - Water Technology

Areas of Expertise and Competence
Construction Administration, Construction Inspection, Project Management

Responsibilities and Experience
Mr. Bustos brings 30 years of experience in stormwater, water, wastewater, and roadway infrastructure projects. He is experienced in utility, drainage, subdivision, roadway, construction administration, project management, and development review. Prior to joining SMA, ***Mr. Bustos was the Senior Inspector for the Public Works Department of the City of Las Cruces.*** His area of specialty is the inspection of utility construction projects, during which he monitors for potential installation deficiencies, makes recommendations for cost savings to projects, and ensures proper submission of pay applications to maintain progress on each project.

Representative Past Projects

- Mescalero Apache Tribe Gallerito Water System Construction
- Village of Ruidoso Multiple Water, Sewer, and Roadway Improvements
- Doña Ana County Dragonfly Diversion Channel
- Lower Rio Grande PWWA Multiple Water & Wastewater System Improvements
- Garfield MDWC & MSWA Multiple Water System Improvements

Stronger Communities by Design®

3. Performance of the Firm

Similar Past Contracts

The nature of on-call contracts presents unique challenges due to the variability in type, schedule, and required effort of assigned tasks. To adequately meet the needs of the City of Las Cruces, a consultant must be responsive and have resources available at any time. Assigned tasks typically have short schedules, unique challenges, and tight fiscal budgets, requiring the most qualified personnel to meet these constraints. In order to successfully provide on-call services, the consultant must offer these key assets:

- Single point of contact for the client with a thorough understanding of task requirements
- Familiarity with the project area(s)
- Multi-discipline capabilities
- Qualified engineers and technicians
- Availability of staff
- In-place quality assurance/quality control measures programs
- In-place accounting systems to handle on-call tasks and accelerated schedules
- Experience with on-call service contracts

Specific project tasks associated with current on-call contracts with other municipalities, counties and state agencies include asset management plans, comprehensive plans, feasibility studies, roadway design, utility design & coordination, right-of-way maps, historical/cultural/biological reports, solid waste design and monitoring, sidewalk/bicycle path design, landscape design coordination, structural design, parking lot and driveway design and public information meetings, as well as surveying and stormwater drainage analysis and design.

The following is a small sampling of clients for whom SMA currently or has recently performed comparable on-call, multiple project engineering services:

- ***City of Las Cruces, NM***
- City of Deming
- Town of Mesilla
- City of Farmington
- City of Sunland Park
- New Mexico Department of Transportation
- Grant County
- Doña Ana County
- Otero County
- Sandoval County
- El Paso Electric Company

In addition to on-call engineering contracts, SMA has recently provided and/or is currently providing services similar to those described in the City's RFP through stand-alone contracts with a variety of New Mexico clients. Further projects are listed in Section 5 of this proposal.

Subcontractors

Sites Southwest, LLC (SSW) | Master Planning

SSW was founded in Albuquerque in 1997 as a firm dedicated to community planning and landscape architecture. In their 25+ years in business, the firm's mission has been to help their clients create and sustain strong communities. Whether at the level of a comprehensive plan, corridor plan, facility plan, or landscape design, SSW keeps economic, social, and physical sustainability in mind. SSW is fortunate to partner with their clients over time, supporting local community goals from comprehensive plans through project implementation.

SMA and SSW maintain a consonant working relationship and have partnered on numerous parks, trails, and planning projects, including the City of Las Cruces Desert Trails Community Park, City of Las Cruces Highland Park, Village of Ruidoso Master Planning Oversight, City of Santa Fe Pedestrian Facilities Improvements and Safety Program, and City of Farmington Gateway Park Site Development.

D.C. Environmental, Inc. (DCE) | Environmental

DCE was founded by Karen Dremann and David Charlesworth, whose 28-year career in the Southwest has been based on the principles of sound industrial hygiene and adult education. DCE is founded on the belief of scientific practice to recognize, evaluate, and control environmental hazards.

Their project involvement regarding environmental surveys and assessment includes interactive inspections and investigations, quality control and input from laboratories or design professionals, and cost-effective approach to remediation strategies. Mr. Charlesworth has performed a major part of his career overseeing hazardous materials remediation activities, air quality assessments and asbestos abatement.

Bath Group, Inc. (Bath) | Supplemental Computer Network Analysis

Bath is a professional engineering firm with offices in several states. It provides engineering, commissioning, and process safety management services through its three divisions, Bath Engineering Corporation, Bath Commissioning Corporation, and Bath PSM. The firm was founded in 1957 and has grown to more than 50 employees with over 1,000 years of combined construction experience. The staff is very stable, with many employees having served the firm throughout their careers.

Bath takes pride in its dedication to sustainable design, having worked on dozens of buildings registered for LEED certification. Bath provides services to a wide range of clients including state and federal government, military, healthcare, higher education, municipal, and private commercial and industrial clients.

Southwest Engineering, Inc. (SEI) | Geotechnical Assessments, Soil & Groundwater Testing

SMA has worked with SEI for over 25 years. During this time, SEI has provided SMA with construction materials testing, geotechnical drilling, and environmental drilling services. Started in 1972, SEI has 6 full time employees and operates out of an 8,000+ square foot, fully equipped engineering facility. Staff includes one registered New Mexico Professional Engineer, one senior National Institute for Certification in Engineering Technologies (NICET) technician, and two others in various levels of NICET/ TCPP certifications are on staff, full-time. With more than 45 years of professional geotechnical experience SEI has the ability to meet project related needs in a timely, efficient, and professional manner.

All services to be performed as part of this proposal will be done so in accordance with the specifications and guidelines of the American Society for Testing Materials (ASTM), American Association of State Highway and Transportation Officials (AASHTO), and any other test methods directed by the City. More specifically, SEI will perform all testing as outlined by ASTM Specifications D-420 and D-3740.

Raxis Engineering (Raxis) | MEP, Gas, and HVAC Design

Raxis is an established consulting engineering firm with 25 years of experience in providing solutions for electrical and mechanical design, as well as energy management for a wide range of clients. Their experienced team provides a range of practical and innovative engineering solutions using energy efficient practices and current technologies while focusing on personal relationships, client needs, and customer service. Raxis has the ability and resources to provide quality services under very tight schedules, providing immense value to each client's projects. They incorporate several design strategies to minimize both construction costs and operational costs.

The Response Group (TRG) | Electrical Design and SCADA System Design

TRG was established in 1997 and has a long-established presence in New Mexico as an electrical and mechanical engineering company, having completed numerous similar infrastructure projects in the region. Their success with municipalities and rural utilities throughout the state has resulted in numerous repeat clients that depend upon TRG's responsiveness, cooperation, partnering, and customer satisfaction.

SMA has worked with TRG on numerous infrastructure projects similar to those anticipated for the City and have developed a synergistic relationship to successfully complete each project. Recent utility infrastructure project clients for whom SMA has teamed with TRG have included Village of Ruidoso, Hondo PSD, and City of Carlsbad.

Locations Where Work Will be Performed

With no specific projects established, fully accurate percentages of work to be performed are difficult to assess. The following percentages indicate our estimate for the percentage of work to be performed by SMA and our subcontractors by location.

SMA
Las Cruces - 86%
Albuquerque - 2%

SSW
Albuquerque - 2%

DCE
Albuquerque - 2%

Bath
El Paso - 2%

SEI
Las Cruces - 2%

Raxis
Las Cruces - 2%

TRG
Albuquerque - 2%

Stronger Communities by Design®

4. Management Structure and Approach to Project

Principal Officer Responsible for Administration of the Contract -and-

Professional Engineer Responsible for and in Direct Charge of the Work

Paul J. Pompeo, P.E. (NM PE #11490)
Vice President / General Civil Technical Sector Director / Principal Engineer
3500 Sedona Hills Parkway
Las Cruces, NM 88011
575.449.2836

Management Structure

Of the staff presented in Section 3, seven of our 10 task leads are based in (and residents of) Las Cruces and ***collectively represent well over 200 years of specific engineering experience in Las Cruces.*** Likewise, seven of the task leads each have more than 30 years of professional experience, and all task leads have more than 10 years of experience as a project manager and team leader; this represents a level of both professional experience and management acumen that is well beyond that of any firm with an office in Las Cruces.

More specifically, ***Mr. Pompeo has provided the requested services on projects in Las Cruces for more than 30 years.*** He has led teams for a variety of projects throughout New Mexico and surrounding states with constructed values exceeding several million dollars. Mr. Pompeo, as the Principal-in-Charge and Project Manager to the City, has an unparalleled local knowledge for site development and was the principal engineer and owner of Las Cruces-based SEI for over a decade. Mr. Howell, as a Task Lead, has provided water resource project management throughout Doña Ana County ***(including projects directy for the City)*** as well as New Mexico and surrounding states, using a diverse team of professionals that he has mentored throughout a career extending more than 30 years. Mr. Johnson has been with SMA for nearly a decade and combined with his 27+ years at City of Las Cruces, he brings a broad depth of public works project management experience, as well as ***local experience working in Las Cruces for nearly four decades.***

Project Time Schedule

As the City has not identified any specific projects at this time, SMA cannot establish definitive schedules and rather can only subjectively discuss scheduling practice. As each project is determined, SMA will work closely with City staff to determine a practicable schedule that allows adequate time for data collection, design development, reviews (typically 30%, 60% and 90%), and final production.

SMA also understands that the timeline frequently is also dependent on constraints such as fiscal year budgeting and funding sources. The diverse nature of services in this RFP scope means that the corresponding timeline for delivery is also highly varied; Phase I ESAs may take only 10-15 business days to complete, while more complex services such as drainage studies may take more than one year to complete. Ultimately, all assigned tasks are entered into SMA's financial management software, allowing for tracking of anticipate completion dates by subtask and presenting all project participants with visual indicators of progress versus budget. Although some projects are delayed by circumstances outside of the control of SMA (e.g. agency review, weather, utility locates), we strive to maintain initial project schedules, including work beyond regular hours.

Operational/Management Approach

SMA's approach to the management of each project was previously outlined in Section 1. SMA is presently organized into five business lines (or disciplines): General Engineering, Environmental, Surveying, Water Resources, and Transportation, which have several sub-disciplines, such as stormwater management, solid waste, intelligent transportation, planning, and sUAV surveys. Each subdiscipline includes one or more subject matter experts and a tailored QA/QC path based on overall objectives. All of the corporate support notwithstanding, SMA projects are all managed through local project managers who have direct contact with their clients. Each local project manager is typically backed by another project level employee, who is also local, providing secondary contact and flexibility in meeting with City staff.

Major Tasks to be Accomplished

SMA understands that this on-call contract will include projects of various sizes and types throughout the City. The first stage of any project is scoping, which may simply include information provided by the City in email or a more involved on-site pre-project meeting. The next stage will develop the workplan, which will include scope, fee, and timeline specifics for City-outlined tasks. Depending on the project scale, interim meetings may be held with City staff to discuss progress, changes in conditions, and any items that might alter the timeline for delivery.

As noted earlier, the size of the design project will dictate the number of review plans before the final plan set. These design packages may also include specification packages utilizing standard details provided by the City, or those developed by SMA in working with communities throughout the southwest. For planning phase projects, various staged deliverables may be submitted, while for investigative tasks typically only a final report is produced. Deliverables for resident project representative, by contrast, may range from daily written reports to summaries coordinated with contractor payment schedules.

During the course of all projects, billing is typically completed either on a monthly (for time and materials or percentage complete tasks) or a deliverable basis. Time and materials invoices will include a breakdown of all charges accumulated during the billing period. At the completion of each project, SMA will offer the opportunity for feedback from the City to identify areas of improvement, if any, for subsequent assignments.

Statement of Services

Services associated with projects under this on-call contract as outlined in the RFP may include, but are not limited to the following:

Master Planning

SMA has experience in providing master planning reports for infrastructure, transportation and traffic, community facilities, and present and future land use for a variety of municipal and utility clients. SMA develops many types of infrastructure master planning documents, including but not limited to:

- Comprehensive Plans
- Asset Management Plans
- Utility Master Plans
- Preliminary Engineering Reports
- Water Conservation Plans
- 40-Year Water Plans
- Feasibility Studies
- Drainage Master Plans
- Sustainability Plans
- Capital Improvement Plans

Master planning will begin by reviewing existing documents and typically includes identifying feasible areas for development, producing layouts of residential and non-residential tracts for future development, planned and necessary future infrastructure improvements, and the capacity and deficiencies of the existing infrastructure.

Our teaming partner, SSW, has extensive experience with master planning projects throughout the state and will provide additional planning assistance as necessary, should a project require further services. SMA has worked with SSW on numerous successful planning projects throughout the state over the past two decades.

Electrical, Mechanical, Gas System, Plumbing, and HVAC Design

SMA's subconsultant, Raxis, will provide any necessary electrical, mechanical, gas system, plumbing, and HVAC design that may be required for the City's projects. Raxis, an established in 1999, undertakes new construction projects, as well as renovations, and can provide plans, equipment specifications, and performance specifications. In addition to the conventional mechanical, electrical, and plumbing (MEP) services, they provide energy auditing services for educational, commercial, and industrial facilities, as well as fire system consulting, life safety, and planning services. Raxis' multidisciplinary expertise allows them to help reduce energy consumption to maximize the client's return on investment by implementing energy efficient designs with an emphasis on building sustainability and productivity.

Site Development (Drainage and Grading Design)
SMA performs drainage structure inspections to provide analysis and modeling to efficiently control stormwater drainage, analyzing the channel flow and modeling the backwater curve to effectively characterize the drainage basin. SMA provides designs to protect and control against erosion and floods and has used above ground channelization and below ground conveyance. SMA also provides development of Storm Water Pollution Prevention Plans (SWP3) and state mandated Sediment Control Plans, including the development of best management practices.

Structural Design
SMA provides structural analysis and design for a variety of engineering projects throughout the Mountain West region. These services range from field review and structural analysis of proposed and existing structures in the solar industry, pre-cast concrete, oil & gas contractors, and various public and private clients; to the structural design of various buildings, including schools, community centers, airplane hangars, and water treatment facilities; to industrial and civil structures, including wet wells, pump stations, spreader bars, crane supports, abutments, retaining walls, mechanical support, and many other applications. SMA's structural design experience consists of the use of various materials, including steel, concrete, light gage, wood, and masonry.

Roadway, Transportation, and Parking Lot Design
SMA has completed many substantial road and highway projects throughout New Mexico and surrounding states, including parking lot and driveway design for a variety of structures and commercial development sites. SMA provides data collection, design, stormwater calculations, environmental support, bidding, construction staking, construction observation, project management and development of as-constructed record diagrams. Clients have included the New Mexico Department of Transportation (NMDOT), counties, cities, towns, villages, tribes/pueblos, public schools, engineering consulting firms and private entities. Recent road design experience includes rural arterial and collector streets in difficult soil and topographic conditions, development/design of traffic circles, urban arterial and collector streets and signalized intersections of state highways. Specific project tasks include feasibility studies, alignment alternative design, utility extension design/utility coordination, right-of-way maps, historical/cultural/biological reports, curb-and-gutter design, sidewalk/bicycle path design, landscape design coordination, structural design, parking lot and driveway design and public information meetings, as well as surveying and stormwater drainage analysis and design.

Drainage Studies (including FEMA Flood Studies) and Stormwater Management
SMA's experience includes civil site design, watershed hydrology and yield studies, hydraulic analysis of natural and manmade water courses, GIS mapping and analysis, hydraulic structure design and structural engineering. SMA has several staff with training and background in desert stormwater management and floodplain evaluation. Combined with in-house surveying resources, SMA can develop large and small-scale floodplain management projects. SMA staff members have completed LoMR and CLoMR projects throughout New Mexico to allow and otherwise improve development of parcels that border FEMA floodplains.

Drainage Infrastructure Design
SMA has developed state-of-the-art drainage analysis methods utilizing GIS, WMS and HEC-HMS. However, SMA has reduced the cost and time necessary to collect this data and develop the hydrologic model by using up-to-date GIS methods instead. With software, such as ArcGIS, combined HEC-GeoRAS & HMS, FLO-2D, and WMS, SMA now develops drainage basin maps and preliminary hydrologic and soil factors directly from GIS sources before the project has been surveyed.

SMA has a variety of methods available for performing drainage analyses, depending on the size and complexity of the project. Some of these methods include:

- USGS Regression Method
- HEC-DSS, HEC-RAS 5.0 and HEC-HMS
- FLO-2D Pro
- FlowMaster
- SSA (AutoCAD Civil 3D)
- StormCAD

Stronger Communities by Design®

Water, Wastewater, and Natural Gas System Design and Analysis
SMA has been involved in pipeline-based infrastructure system improvements projects (including water, wastewater, and natural gas) for more than 30 years, and has performed work for municipalities, private clients and other public entities that covered a full range of services. SMA engineers have completed many NMED and United States Department of Agriculture (USDA) formatted preliminary PERs and associated EIDs, several of these with time limited completion schedules. Our staff will utilize GASWorkS, InfoWater, and InfoSewer software to complete each project for the City.

SMA assists many public and private entities in securing and maintaining reliable sources of high-quality drinking water and in the proper disposal of liquid wastes. Many of these projects need to be phased to reduce the financial burden associated with the improvements. The initial phase includes a site investigation, resulting in a preliminary engineering report of the water or wastewater system. This report contains specific information regarding the age of the existing system, the adequacy of the equipment, the required system capacities, and any ancillary data such as possible inflow/infiltration sources (for wastewater projects) or wellhead protection programs (for water projects). An estimated project cost is then developed, and possible funding sources are identified.

Solid Waste Studies and Landfill System Design & Analysis
SMA assists with solid waste regulatory compliance issues, including site selection, fatal flaw analysis, and development of site closure and post-closure care plans for municipal and private landfills. SMA also provides design and permitting of new landfills and solid waste collection centers, remediation of contaminated sites, and design of recycling centers. Many of these activities require field investigations to characterize the hydrogeologic setting, including existing cover material, methane generation, and the potential for groundwater contamination. This information is then used to develop monitoring requirements, revegetation requirements, operational design, cell design, and storm water collection design.

Geotechnical Assessments / Soil & Groundwater Testing
SMA provides both geotechnical and environmental soil and groundwater investigations. SMA can provide geotechnical and foundation analysis and design. SMA team members have completed numerous geotechnical investigations throughout the region over the past 29+ years, both as stand-alone projects and in conjunction with a variety of infrastructure improvements. Our teaming partner, SEI will provide any necessary drilling services and testing associated with geotechnical services for the City's projects.

Environmental Surveys, Assessments, Monitoring, and Management
SMA provides ASTM Standard Phase I ESAs and ASTM Standard Transaction Screens to help clients assess environmental liability associated with a property. Phase II investigations are also conducted as required. Under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, liability for site cleanup as a result of a release of hazardous substances into the environment is assigned to the responsible party or landowner. To reduce the risk of such liability, a landowner, a potential landowner, or a loaning agency may choose to complete an environmental assessment to determine if a property has been contaminated.

Monitoring and Managing Indoor Air Quality and Asbestos Investigations and Removal
SMA provides indoor air quality and asbestos monitoring and management services with the assistance of our subconsultant, DCE to provide comprehensive indoor air quality and industrial hygiene consulting services. SMA regularly samples indoor air quality and building materials that may affect indoor air quality (e.g. roofing, floor tile, acoustical tile, etc.) including asbestos lead and mold. SMA's hazardous materials management includes identifying and controlling on-site and on-the-job health hazards. We provide qualified personnel to test for the presence of such hazards, evaluate existing hazards, and design strategy by which these can be controlled or eliminated, implementing strategies to ensure OSHA compliance. DCE's Certified Industrial Hygienists can provide human health risk assessments to include planning, hazard identification, dose-response, and exposure assessments, as well as risk characterization.

Computer Network Analysis
SMA's project team, along with Bath, will provide computer network analysis for the City's infrastructure systems, including but not limited to water, wastewater, and gas. Our team has considerable experience with a variety of systems and components, including I&C and SCADA systems. All work will be completed using GASWorkS, InfoWater, and InfoSewer to adhere to the City's systems.

Expert Witness Services
SMA has experience providing professional witness and deposition services in judicial and quasi-judicial settings for clients throughout the region for projects such as water rights, stormwater management and environmental contamination. Depending on the specific discipline, SMA can provide several local resources for a variety of engineering and environmental project types. In cases requiring substantial resources, SMA can extend into the full depth of staff and provide multiple experts in most specific areas of support required by our clients.

Project Management
SMA staff includes several members that hold PMP certifications, an industry-recognized standard of education and testing for project management. Many additional staff have attended specific classes in project management with various professional organizations such as the PSMJ and the Zweig Group, and internal training on aspects of project management (record keeping, financial management, invoicing, etc.) approximately every other month.

Construction Inspection
SMA has over 30 years of experience in construction observation for infrastructure improvements in New Mexico. With multiple construction observers, our resources allow for thorough monitoring of any size project, including multiple sites concurrently. Depending on active workloads at the time a project commences, SMA's primary Resident Project Representative for the City's projects will be Mr. Richard Bustos, who has provided construction observation services for numerous projects throughout the City.

SMA provides support services from the pre-construction meeting through the final walk-through. As required for each project and the project funding agency, SMA's observation personnel are OSHA safety trained and PPE equipped. Our construction observation staff prepares detailed daily reports that are available to the project engineer and client. SMA's project engineer monitors progress pay applications, information requests and issues review and approval of all project submittals. Upon project completion, SMA provides funding agency closeout documents, operation and maintenance manuals (if required), reconciliation of funding and construction payments, and engineering completion certifications.

5. Performance with Previous Clients

The following project descriptions provide a sampling of SMA's recent project experience similar to the scope of work described in the City's RFP.

Doña Ana County – Doña Ana Walking Trail and Lighting Project Phases 1 & 2, Doña Ana, NM

Contact: Rene Molina, Engineer Supervisor, Doña Ana County Engineering Road Department; 575.525.6170; renem@donaanacounty.org

SMA was contracted for the conceptual design, planning, and construction documents for the construction of ADA-compliant sidewalks and street lighting in the Village of Doña Ana, NM. Based on project funding logistics, the project was to be fully designed, then constructed in phases. Project construction documents were prepared with the maximum practical number of phases to give maximum flexibility to future construction phases based on the available funding. The Phase 1 project area included nine streets within the community, and Phase 2 included portions of eight additional streets, primarily in the historic district of the Village.

Our project team worked closely with Doña Ana County Engineering staff on the development of both phases of the project, which encompassed more than 5,500 lf along all subject streets. Project elements included:

- Development of project boundaries, including areas of new ADA sidewalks and street lighting
- Evaluation of various type of walking surfaces (concrete sidewalk versus asphalt multi-use trail)
- Evaluation of streetlight pole options to include: El Paso Electric-provided lighting, 25-foot aluminum pole street lighting (City of Las Cruces specifications), decorative lighting, and bollard type lighting to specifically light walking surfaces
- Evaluation of streetlight fixture options to include different types of illumination (LED, HPS, and others) and different types of light color options (white, yellow, and others)
- Written report detailing streetlight pole and fixture evaluations with recommendations
- Other amenities identified for desired inclusion by Doña Ana County residents or through the public meeting process
- Preparation of a preliminary cost estimates to include phasing recommendations
- Topographic surveying for both design and construction phases, including aerial mapping, GPS surveying, and review of LIDAR-based record data
- Construction administration of more than 1,575 lf of ADA-compliant sidewalk, 600 lf of 8-foot-wide asphalt walking path, and 35 new streetlights
- Ongoing coordination with County Engineering staff to discuss comments and solutions

NASA White Sands Test Facility – Natural Gas Distribution System Replacement Project, Doña Ana County, NM

Contact: Juan A. Mujica-Kohler, Project Lead NASA - White Sands Test Facility; 575.525.7544; juan.mujicakohler@nasa.gov

SMA prepared construction plans and documents to remove the existing low-pressure natural gas line, meters and connections and replace with new low-pressure gas lines, meters, and connections within the entire Johnson Space Center NASA facility. This included the 100, 200, 300, 400, 600, and 800 areas. The project included conceptual design, topographic survey, preliminary design, and final design for the new low pressure natural gas line.

City of Alamogordo – Ed Brabson Balloon Park Project, Alamogordo, NM

Contact: Belinda Bass, Director of Parks and Recreation, City of Alamogordo; 575.439.4269; bbass@ci.alamogordo.nm.us

SMA prepared construction plans for the expansion and upgrade of the Ed Brabson Balloon Park in Alamogordo, N.M. The project consisted of expanding the parking lot and pavement, adding 32 feet by 40 feet permanent stage and new 6-stall restroom facility including electrical service to both, adding vendor electrical hookups, installing 4-feet-tall fencing around a designated alcohol-serving area, adding a new sewer line in Lavelle Road, and designing site grading and drainage. A geotechnical investigation, drainage report, and Opinion of Probable Cost were also completed and included with the design documents.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this_____day of _____ ,2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Stantec Consulting Services, Inc., of 370 Interlocken Blvd, Ste 100, Broomfield, CO, 80021, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Stantec Consulting Services, Inc. 370 Interlocken Blvd, Ste 100 Broomfield, CO 80021 ATTENTION: Gabby Contreras Apodaca

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

APPROVED AS TO FORM

4/30/24

City Attorney

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

RFP COMPLIANCE DECLARATION

RFP TITLE: **General Engineering Services**

RFP NO.: **23-24-051**

DUE DATE/TIME: **February 27, 2024 / 4:00 p.m.**

In compliance with the requirements of this RFP, I, the undersigned, offer and agree to furnish any or all materials and/or services to the City of Las Cruces within the time agreed.

I further certify that this company has not been debarred, suspended, or otherwise made ineligible for participation in Federal Assistance programs under Executive Order 12549 Debarment and Suspension as described in the Federal Rules and Regulations.

Receipt of Addenda Nos.: 1 is hereby acknowledged (where none received, place a zero in this space)

Las Cruces, NM 88001

Stantec Consulting
Services Inc.
3831 E Lohman Avenue,
Suite 200
Las Cruces, NM
88011-8447

Stantec is appropriately licensed in accordance with the laws of the State of New Mexico through the New Mexico Regulation and Licensing Department to provide engineering services in New Mexico. The principal-in-charge will be Colleen Ruiz, NMPE #16240.

Dear Members of the Selection Committee,

Our local Las Cruces employees understand the strain of growth that Las Cruces is undergoing as the fastest growing city in New Mexico with a year over year growth rate of 12%. We have witnessed the recent expansion of the city firsthand and as part of the community we are ready to help improve and expand the municipal infrastructure needs through engineer services.

Local Experience. Our project team has strong roots in New Mexico and has been a trusted source to nearly 130 local governments and utilities for more than 45 years. This project management and core technical team are locally based in our Las Cruces office where we have held a presence for more than 30 years. We have experience in planning, landscape architecture and structural design as well as design of roadways, site development, electrical, mechanical, water, wastewater, SCADA, gas, storm drains, and streetlights. We have environmental and traffic engineers on staff as well as staff skilled with network analysis software.

The Stantec Difference. As a company of over 28,000 employees, we also have highly specialized teams who are practiced at design of EV charging stations, electrification plans for transit, urban planning, and LEED design among other skills. Our **local strength, knowledge, and relationships, coupled with our world-class expertise,** have allowed us to go anywhere to meet our clients' needs in more creative and personalized ways. With long-term commitment to the people and places we serve, Stantec has the unique ability to connect on a personal level and advance the quality of life in communities in Las Cruces.

If selected, we will **listen, communicate, and deliver** designs to help Las Cruces thrive. Thank you for your consideration. Wesley Hall will serve as your primary point of contact and is available should you have any questions or require additional information.

Sincerely,

Stantec Consulting Services Inc.

Wesley Hall
Client Services Manager | Project Manager

colleen.ruiz@stantec.com

EVALUATION CRITERIA NO. 1

Technical Approach

A. PROFESSIONAL, TECHNICAL, AND CUSTOMARY SERVICES

We will provide a **client service manager (CSM), Wesley Hall, as the primary point of contact and project manager**. He will be in frequent contact with you to make sure that our project teams are being responsive and providing services in a way that is meeting the City's needs and expectations.

The **principal-in-charge (PIC), Colleen Ruiz,** except in limited circumstances, will have the authority to make contractual and other decisions on behalf of Stantec. She will be involved upfront in the development and approval of task orders and will remain engaged in each project. In certain circumstances, Colleen will rely on her leadership team to provide guidance when required.

Depending on the type of project, a project manager will be assigned to each project. We believe that clear and effective communication with the City is critical for project success. We will conduct either bi-weekly or monthly project meetings with the City, and others as needed, to discuss status, concerns, upcoming critical milestones, and other project issues. Internal project team meetings are held every week on major projects. All meetings are recorded, and minutes are distributed following the meetings.

To assure a high-quality product, in accordance with our ISO certification, all deliverables require three steps of review and approval before submittal to the City including: 1) quality control by the task leader, 2) quality assurance by Colleen, and 3) an independent peer review.

The proposed approach and process that we generally follow is described below. The process will vary with certain types of projects and/or funding. For example, federally funded transportation projects will generally require a Phase A/B/C Location Study with considerable public involvement. The typical state or locally funded project would be accomplished as follows:

Request for Proposal: Would generally flow from the City to Stantec's CSM. The CSM would then confer with the PIC about the project team and a team would be assigned. The CSM and project manager will then confer with the City to make sure that we fully understand the City's project scope, objectives, and requirements for the project.

Proposal and Task Order: The project manager will **develop a detailed scope of work and fee proposals** with a breakdown of tasks, including team members performing the tasks, and hours to complete each task at the applicable hourly billing rate. A detailed project schedule and a task order will also be prepared. After the proposal is reviewed by an independent reviewer and then finally approved by the PIC, it will be submitted to the City for consideration and negotiation.

Project Kick-Off: Upon receipt of the notice to proceed from the City, we will schedule and conduct a project kick-off meeting with the project team, including any subconsultants, and applicable City representatives. The **scope of the project, client expectations and requirements, roles and responsibilities, schedule, plan for deliverables, and documentation requirements** will be discussed; and a site review will be conducted.

Design Analysis Report (DAR): Existing conditions are investigated and analyzed during this stage which, depending on the type of project, may include geotechnical and soils, traffic and safety, hydrology and hydraulics, utilities, right-of-way and land ownership, environmental, social, and cultural resources, physical condition of facilities and other conditions that will affect the design and show the purpose and need for the project. If not previously performed, alternatives will be identified and evaluated for determination of the most cost-effective solution on a life-cycle cost basis that will best meet the purpose and need for the project. Findings and recommendations are made in a DAR and presented to the City for review and approval. The DAR is updated with each stage of the design.

Project Design: We will design and develop plan drawings in three stages. Each stage will begin when receipt of written approval is obtained from the City for the previous stage:

- **30% Design** includes survey, geotechnical studies, preliminary drainage and a layout of the project to identify any unforeseen issues and confirm that client expectations and engineer design are consistent. Topographic surveying and mapping as needed.
- **Preliminary Design Submittal (approximately 60%)**– Develop preliminary plan drawings establishing line and grade, define right-of-way and permitting needs, conduct utility coordination meetings, develop construction cost estimate, update overall project schedule, and submit drawings. We will then conduct a review meeting with City and applicable agencies.

  Deliverables:
  - Preliminary report including schedule and cost estimate
  - Preliminary Construction Documents
- **Final Design Submittal (Plans, Specifications, and Estimate) and Bid Package–** Refine pre-final drawings and incorporate comments from pre-final design review and develop technical specifications as needed, update construction estimate, and construction schedule, submit plans to utility companies and coordinate and conduct meeting, submit drawings, bid documents, technical specifications, and construction estimate and conduct final review with the City and applicable agencies. If right-of-way acquisition is required, it begins in this stage.

  Deliverables:
  - Computer network analysis for gas, water, and wastewater if applicable
  - Design files in CAD and PDF format

Bidding: Advertise for construction bids, conduct pre-bid meeting, prepare, and distribute addenda as needed, attend bid opening, tabulate, and assist City in evaluating bids, advise city as to acceptability of subcontractors and suppliers and prepare a recommendation of award letter.

Construction Administration & Observation: Complete executed construction contract documents, coordinate and conduct pre-construction conference, log, review and approve the contractor's submittals, make field visits during construction, and provide interpretations of the contract documents as needed, coordinate, and prepare change orders as needed, review and approve the contractor's pay applications, and conduct meetings with the City and the Contractor. Stantec can also provide a full-time or part-time construction representative.

Deliverables:

1. As-built Drawings in AuotoCAD and PDF format including surveyor information and labeled "RECORD DRAWINGS"

B./C. MAJOR TASKS AND DETAILED STATEMENT OF SERVICES UNDER EACH TASK

Master Planning

Our goal is to enhance the welfare of people and their communities by creating convenient, equitable, healthful, efficient, and attractive environments for present and future generations. Our team starts with a **vision** to improve our communities balanced with a promise to treat our land responsibly. To create careful and thoughtful options for right now as well as for the future, we take into account **site conditions, public input, client needs, and project requirements**. Through a collaborative process, we listen to the ideas of the community members and the goals of the stakeholders to provide creative solutions for our most precious and limited commodity—land. We facilitate positive outcomes that satisfy the needs of clients and approval agencies alike.

We believe that master planning is about understanding the **value of process, successful conflict resolution, collaboration, and consensus** building among all key stakeholders, while never losing sight of the goal to safeguard our natural resources. Because we live in the communities we serve, we feel strongly about responsible land planning. We do this by designing for people. By making sure a new place has the right level of density and activity. By making walking easy, fun and appealing. By adding **visual interest**. By siting buildings to define but not crowd sidewalks. By **building in human scale**, intuitive orientation, and year-round comfort. Our plans support activities and amenities that make people feel at home…and leave them excited for their next visit..

Structural design of buildings, retaining walls, etc.

When collaborating on a project with the City, we will engage in thorough technical surveys to assess the existing conditions and understand the unique challenges posed by the project site. The structural engineer will analyze and design the necessary infrastructure, considering **factors such as load-bearing capacity, safety, and longevity.** This design process involves creating detailed

plans and specifications that adhere to industry standards and local regulations. Throughout the project life-cycle, the structural engineer will collaborate closely with other professionals, including architects, contractors, and City officials for seamless execution. By combining **technical expertise, regulatory compliance, and effective communication,** the structural engineer contributes significantly to the development, maintenance, and enhancement of Las Cruces' public infrastructure.

Roadway, Transportation, and Parking Lot

Our roadway design team in New Mexico has completed **hundreds of roadway and parking lot projects, including local streets, collectors, arterials, parking garages, and stadium parking** ranging in design fees from less than $100,000 to more than $20M. We have completed projects up to approximately $60M in construction costs on projects for state and federal highway routes for the NMDOT. Most of these projects include **multi-modal** facilities (bicycle, pedestrian, transit). We have extensive experience and expertise in all facets of roadway design. All our roadways in New Mexico are designed in accordance with AASHTO standards.

During the development of a project, different design stages and reviews will be considered and submitted for the City's approval. The first review milestone will typically be the preliminary design, corresponding to 30% of project completion. During this period, a conceptual design and selection of potential alternatives will be performed. At this design stage's end, conceptual plans and a conceptual cost estimate will be prepared.

The second design stage is equivalent to 60% project completion. The design of the selected alternative will be carried out in this stage. The third design milestone is the final design stage, which corresponds to a 90% submittal. At this stage, comments on the 60% submittal are addressed, and drawings, specifications, and a cost estimate are essentially complete. The final submittal includes engineer-stamped and signed plans, technical specifications, and an Opinion of Probable Construction Cost (OPCC) as finalized.

Site Development

Our site development civil engineers consider factors such as **roadway and parking lot slopes, building pad elevations, and surface water flow** when designing sites. The existing grade of the site is assessed early on to facilitate proper site development and **cost-effective construction.** We will work within the City's development standards to develop municipal sites that meet local code, are **ADA compliant,** reduce construction costs, and enhance the site. We have experience designing everything from small pocket parks to community centers to professional soccer stadiums and are ready to deliver for the City.

Electrical Design

Our electrical engineering team's design approach to well booster stations includes sizing and selecting pumps, motor control centers, and variable frequency drives while **considering power distribution, grounding and surge protection.** We design for remote monitoring to improve efficiency and reliability. For lift stations we design the pumps, valves, motors and control systems. Odor control stations involve electrical design of fans, blowers, chemical dosing systems and control panels as well as ventilation and odor monitor systems.

Our electric engineers specialize in building design for **lighting, power distribution, emergency systems, energy efficiencies and control systems.** We have teams of building engineers that work on all sizes of projects.

Computer Network Analyses

Our municipal utility team has the software and a working knowledge of **Gaswork, InfoWater and InfoSewer.** We are able to assist the City with updating and analyzing their networks.

SCADA Design

Supervisory Control and Data Acquisition (SCADA) systems provide a crucial role in monitoring and controlling various process, especially water treatment plans. When providing SCADA design, our design team collaborates with multiple stakeholder including operators, IT professionals and city staff. We understand the relevant standards and codes for **safety reliability and compatibility with existing systems.** We investigate power requirements, provide proper grounding and shielding for safety and stability and review contractor submittals in detail.

Mechanical, Gas System, Plumbing and HVAC Design

Stantec's mechanical engineers design the buildings plumbing, heating, ventilation and Air Conditioning (HVAC) and gas systems. They team with our electrical engineers on projects to provide **full-service design.** When designing HVAC systems they calculate heating and cooling needs, design ductwork, and piping systems to provide efficient, safe, and cost-effective solutions.

Water, Wastewater, and Natural Gas Utility System Design and Analysis

We have completed over **200 water supply projects for local government agencies** and associations in New Mexico. Work has included master plans/modeling, Preliminary Engineering Reports, 40-year studies, distribution and treatment systems, computerized hydraulic modeling, investigation and acquisition of water rights, regulatory permitting, environmental clearance, public involvement and operational analyses. We have designed and constructed distribution systems, transmission lines, wells, booster pumping stations, elevated and ground storage reservoirs, treatment facilities, and system automation. Our outstanding record of service is evidenced by our many satisfied, repeat clients. Our professional staff has adapted unique approaches to develop cost effective water supply solutions.

Our experience with sanitary sewer systems and effluent re-use systems is comprehensive including master plans, studies, computer modeling, gravity collection systems, force mains, lift pumps, effluent pumping and storage facilities, effluent pipelines, alternative small diameter systems (including vacuum and step systems), slip liners, pipe bursting, leak detection and video evaluation. Stantec has worked in the design and construction of Wastewater projects including treatment plants.

Scope includes feasibility reports for plant owners that investigates upgrades and/or process adjustments, including the performance of site investigations, review of operating data and research on new techniques and equipment. We designed the rehabilitation of head works facilities, including replacement of bar screen devices.

Traffic Impact and Transportation Modeling Studies

The Stantec Traffic engineering group has experience throughout the state providing traffic impact studies and transportation modeling studies to municipalities and NMDOT. Our team starts with a scoping meeting to understand the ask. Then we collect traffic data. Stantec performs **traffic analysis of the study area for existing, construction, short-term and long-term scenarios. AM and PM peak hour conditions are modeled** separately for all scenarios. We provide a draft traffic study to the client and review the document with them and address any comments or questions before finalizing.

Drainage Studies and FEMA

Our storm water and drainage related services encompass a wide range of expertise and knowledge, including floodplain delineations, flood control design, bridge hydraulic design, drainage infrastructure design, watershed hydrology, sediment transport analysis, drainage design manuals, training programs, alluvial fan analysis, storm water management studies, computer modeling, and drainage master plans. We work regularly with FEMA on CLOMR/LOMR projects for communities. Our services also incorporate critical inclusion of client and stakeholder input through public participation. In addition, development of regulatory and management solutions versus structural alternatives is an expertise of our staff. Projects often include multi-objective components, such as open space habitat and recreation. Public education concerning the multi-objective benefits that water resources play in a community is a key component of our approach and assists our clients by gaining broad-based support for their initiatives.

Storm Drainage

When it rains in Las Crues, it pours. Our drainage team understand the intensity of these local storms as well as the local drainage requirements enabling us to design site and roadway drainage effectively. We are skilled at analysis and writing of drainage reports including both **hydrology studies and hydraulic analysis of the pipes and inlets as well as basin sizing.**

Solid Waste Sites, Landfill System Design, and Analysis

Stantec's solid waste engineers, scientists, and regulatory specialists help clients with **waste reduction, recycling, composting, waste-to-energy, and zero waste projects.** Our team works on the conceptualization, planning, design, and construction of waste management facilities through to the processing and disposal of waste—including closure, reclamation, and post-closure monitoring. We provide strategies for proper waste management systems, examining alternate delivery options and analyzing economics and financing to develop creative and sustainable systems. We've completed **environmental surveys, assessments, monitoring, and management such as indoor air quality, asbestos, mold, and other related services for the City.**

Stantec provides an in-house environmental team that prepare environmental reports, including **building assessments, environmental mapping and biological and cultural surveying and reporting.** This service includes preparing the environmental information and a discussion of the purpose and need for the project, a project description, an analysis of the affected environment, environmental consequences, and cumulative impacts. Also included with the report

would be a discussion of potential mitigation measures needed to minimize the environmental effects. Stantec addresses comments on the environmental report from either the Council or funding agency. Our environmental team strives to prepare the environmental report using desktop reviews of the project area rather than an in-person survey when possible. We will work with the appropriate federal agencies to determine the appropriateness of a desktop review to save the Council project budget and time. Our environmental teams are also **experts in EPA grant funding and have won millions in brownfield grants for our clients.**

Expert Witness in Judicial and/or Quasi-Judicial Setting

We understand that there may come a time when the City needs specialized knowledge in specific engineering areas from **neutral and impartial parties.** Our team includes skilled experts in every field of engineering who can help others understand technical information, present substantiated, unbiased evidence, and provide credible conclusions.

Project Management

Stantec implements a Project Management Framework (PM Framework) that outlines the tasks for all our projects. The scalable PM Framework brings a pragmatic and disciplined approach to project delivery. It includes:

Critical Path Method (CPM) Scheduling: We'll develop a CPM schedule outlining the project's major activities and related durations.

Budget Control: Our enterprise software application allows management of project design expenditures through close monitoring and earned value analysis reporting. We draw on our extensive project knowledge to provide early project scoping costs, updates, and final construction estimates.

Quality Control/Quality Assurance (QC/QA): With our comprehensive quality program, we deliver final services that have been through a detailed review, thereby limiting errors and omissions to provide you with high-quality products.

Value-Added Services: Because we have experts and experience in a diverse range of projects, we bring our knowledge of **various construction options** to designing a project that will best meet your needs.

Construction Inspection

Construction inspection is essential for the success of all projects in the construction phase. Experience shows that proper construction observation **saves time and money, reduces construction related problems, and is the key to a quality project.** Stantec's team has vast experience in working with contractors, associations, utilities, homeowners, and funding agencies during construction. We have a trained staff of construction management and observation professionals from a wide variety of backgrounds to review submittals, track pay applications, and to work directly in the field with City officials and contractors. We can provide observation services from full to part-time as needed by the City and tailor our services to fit the City's specific needs and budget. If problems do occur, we seek a timely resolution and involve the project technical lead and the client as soon as the problem is known. After completing construction, Stantec staff will coordinate and conduct a final inspection, obtain contract closeout documents, coordinate record drawings, and assess the final funding balance. We can tailor our services to provide what you need during the construction phase.

$241M+ Funding applications were submitted for our clients in 2023 alone! We will work tirelessly for the City to help acquire funding. We have experience with state and federal grant applications.

D. TYPICAL PROJECT SCHEDULE/TIMELINE

Schedule control begins with the development of the project plan, which includes scope of work and fee proposal development. We prepare a detailed and realistic breakdown of all the tasks to be performed, reviews and approvals that must be obtained, and coordination that must occur. Identifying and using the critical path method, we determine when each task must be finished and consider the amount of time it will take, and when it must begin. If a project begins to fall behind schedule because of a reason we have control over, we will adjust resources needed to get the project back on track. We review the schedule during internal design team meetings and again with regularly scheduled status meetings with the owner.

Working closely with City staff early in the design stage is crucial to identifying constraints and refining the relative infrastructure locations to mitigate the issues that can lead to delays and cost overruns.

- We will provide an updated schedule during progress meetings with the City and at project milestones (i.e., planning, 30%, 60%, 90%, etc.)

Role: Principal-in-Charge
Experience: 27 years **Availability:** 10%

Colleen, an NMSU graduate, sees opportunity in Las Cruces — an opportunity to help the community build strong, sustainable infrastructure while respecting history and planning for the future. She understands the funding mechanisms and processes within the state to help match community contributions for big changes. With more than two decades of engineering design experience working on multi-disciplinary projects across New Mexico, and beyond, she has a knack for empowering communities to realize their potential and works with stakeholders to make sure all voices are heard. As the sector leader for New Mexico's community development group, Colleen works with project teams to set clear objectives, staffing, project needs, schedules, and expectations. Colleen has worked with a wide variety of clients including municipalities, military facilities, major technology companies, and developers across the Southwestern US to design their visions.

WESLEY HALL

Role: CSM and Project Manager
Experience: 27 years **Availability:** 30%

Wesley, an NMSU graduate, has experience in engineering, project management, and field surveying. He has designed and managed civil engineering projects ranging from residential subdivisions to large commercial sites for utility lay-outs including sewer, water, and gas. Wesley has a very well-rounded background collaborating with municipalities including the Villages of Columbus and Ruidoso; Cities of Truth or Consequences, Sunland Park, Alamogordo, and Las Cruces; and Luna, Otero, Sierra, and Dona Ana Counties. He has been very successful in bringing projects from conception to final construction in both the private and public sector.

ZUSSET ORTEGA, PE

Role: QA/QC
Experience: 6 years **Availability:** 20%

Zusset, and NMSU graduate, is a civil engineer with five years of experience working with government and consulting agencies in the state of New Mexico including an internship with the City of Las Cruces. She has prior experience in roadway construction and maintenance, transportation design, and bridge inspections with NMDOT. Since joining Stantec, Zusset has worked with community development in roadway and drainage improvement design for local communities.

GEORGE ESQUEDA

Role: Funding
Experience: 31 years **Availability:** 30%

George brings a high degree of engineering expertise, capability and extensive project management skills. His skills as a communicator, listener, and manager have led to the successful completion of numerous and complicated projects within Southwestern New Mexico. His detailed experience enhances and facilitates the successful completion of the projects in which he is involved for numerous municipalities including the Town of Silver City, City of Lordsburg, Village of Santa Clara, City of Bayard, Town of Hurley, Village of Reserve, Grant County, Hidalgo County, and Catron County. George has been involved in most CDBG, RUS, COOP, and state legislative projects for the company managed out of the Silver City office for water, wastewater, roadways, and streets.

LISA CAMPBELL

Role: Funding
Experience: 29 years **Availability:** 20%

Bridging our clients with urgently needed funding sources are a passion for Lisa, an NMSU alumni. She is our dedicated grant specialist and serves rural New Mexico clients by administering grants from various programs such as the NMDOT, Small Cities Community Development Block Grant Program, Legislative Appropriation, programs through New Mexico Environment Department and USDA/Rural Utilities Service. Lisa understands the grant process, available funding, and the best way to approach complicated application requirements. She has built professional relationships with state and federal funding agencies, allowing her to serve as a voice for clients navigating the application process. Lisa's familiar with federal and state agency requirements for bidding, contract management, and construction of these programs. She provides operational tools to meet technical, budgetary, and scheduling requirements.

MARK MALDONADO, PLA

Role: Master Planning
Experience: 15 years **Availability:** 25%

Mark is a discipline lead for Stantec's southwest planning and landscape architecture practices. In his 15 years of experience, he has led or participated in project types including sports parks, trail systems, park master plans, and system design guidelines. Mark has worked

with dozens of municipalities, counties, and river authorities to reach their visions. Much of Mark's public sector experience is through projects pertaining to parks and recreation. He understands the design process, as well as the steps needed in a public forum to arrive at the solution. As a landscape architect and planner, Mark has a keen sense for the land and brings enthusiasm and professionalism to the public process to help clients arrive at solutions to their future needs.

FRANCIS CATANACH, PE

Role: Structural Engineering
Experience: 27 years **Availability:** 10%

Francis, an NMSU graduate, brings experience managing structural engineering projects, including structural engineering design and analysis, structural project management, project design documentation, and coordination with architectural and other engineering disciplines. He has experience in the design of new structures, renovation and upgrades to existing buildings, forensic investigation of distressed structures, historic preservation, and adaptive reuse. Francis has extensive experience with the City and in Las Cruces including the following: Fire Station #1 Mechanical Upgrades, Veteran's Memorial Park, Unidad Park, NMSU on-call various projects, and Las Cruces Public Schools on-call various projects.

LAWRENCE RAMIREZ

Role: Electrical Engineering
Experience: 19 years **Availability:** 10%

Lawrence, an NMSU graduate, has experience in electrical design and project management. His expertise includes power distribution, emergency power generation, electrical service, lighting systems and controls, fire alarm systems and low voltage systems. Lawrence's generous array of market sector experience includes projects for healthcare, commercial, education and government facilities. Additionally, Lawrence is motivated, personable and technically oriented. He provides top notch customer service along with collaborative design solutions that satisfy both owners and users.

MIKE GEORGALAS, PE

Role: Computer Network Analyses
Experience: 25 years **Availability:** 20%

Mike's responsibilities include preparation of contract drawings and specifications, as well as coordination with utilities, reviewing agencies, and outside consulting firms. Mike conducts water and wastewater conveyance system designs, hydrologic and hydraulic investigations and reports, and associated civil engineering designs (grading, paving, and utilities). Specific project experience includes water distribution and transmission main design, pump station design, hydraulic modeling, water system master plans, and specifications and bid document preparation.

BARABARA HERRERA, PE

Role: SCADA Design
Experience: 19 years **Availability:** 10%

Barbara is a licensed engineer with experience in private and public-sector utility infrastructure. Her experience includes designing both electrical and instrumentation and controls systems for water and wastewater facilities around the country. Barbara's experience includes electrical engineering for both lift stations and booster pump stations.

JOHN BURNS, PE, LEED AP BD+C

Role: Mechanical
Experience: 10 years **Availability:** 10%

John uses his knowledge and experience leading the design of building mechanical engineering systems with an integrated design approach to deliver optimum design solutions. He brings a focused and compassionate mindset to the design of complex MEP solutions that balances client goals with an emphasis on sustainability. John has worked in a variety of sectors from municipal and commercial buildings, healthcare, data centers, waste water treatment plants to large cooling & heating plants throughout the country. John is highly knowledgeable with high performance building design and integrated complex renewable energy systems into mechanical designs.

PATRICIA BOLLIGER, PE

Role: Water/Wastewater/Drainage
Experience: 17 years **Availability:** 5%

Patricia, an MMSU alumni, supervises business development activities, business management, and project development in New Mexico. Her primary focus is on client satisfaction, and with that comes ensuring projects are delivered on time, on budget, and with the high quality our clients expect and deserve. Patricia's engineering experience includes water resources, water and wastewater infrastructure treatment, conveyance, flood control, community development, and transportation in planning, design, bidding, and construction phases of projects. Patricia employs practical and proven project management methodologies that optimize project resources

to deliver high-quality deliverables on schedule and within budget. She excels at leading multi-discipline teams, developing comprehensive design criteria, evaluating site characteristics and value engineering opportunities, and preparing preliminary and final design documents that serve as the basis for construction.

GENE PAULK, PE

Role: Roadway, Transportation, and Parking Lot Design
Experience: 25 years **Availability:** 20%

Gene, an NMSU graduate, brings experience in transportation engineering, including planning, budget allocation, and project and personnel management. Gene has extensive experience working with NMDOT and local government municipalities including City of Deming and City of Las Cruces. This experience has given Gene a deep understanding of the standard processes, challenges, and needs associated with municipal on-call contacts. As a lifelong resident of the New Mexico, he's worked throughout the southwest and is dedicated to the safety and development of transportation infrastructure within the state.

CLAY KOONTZ, PE

Role: Traffic Impact and Transportation Modeling Studies
Experience: 25 years **Availability:** 20%

Clay, an NMSU graduate, is a transportation, traffic, and highway safety engineer with consulting experience in New Mexico. He has a wide variety of traffic engineering experience in all areas of the state. Clay has served as traffic engineer on small and large, municipal, and NMDOT projects. Such projects have included traffic operations, planning, public involvement, traffic data collection, traffic signalization, and roadway lighting. He has specialized experience as highway safety engineer for the strategic highway safety plan for NMDOT and led multiple road safety audits across the state. He is currently serving as technical lead for the design of the NM 31/US 285 Intersection Realignment Alignment Study and Design, the Jal Relief Route Location Study and Design, the US 60 (Ft Sumner to Clovis) Location Study, the Eddy County Carrasco Extension (South Bypass) and the Hyde Park (Santa Fe to SF Ski Resort) Location Study. Clay was chosen as transportation project technical lead for this proposal because of his history and experience of supporting clients on similar tasks and projects and his experience in working together with Gabby as a successful leadership team.

WAYLAND OLIVER, PE

Role: Civil Engineering **Experience:** 28 years **Availability:** 10-30%

Wayland brings an extensive history in planning and design for rural, municipal, and county clients. He brings broad knowledge and experience with municipal planning documents such as PERs, pavement management plans, asset management plans, leak detection reports, scoping reports, technical memos, and technical guidance for Comprehensive Plans and Infrastructure Master Plans. His water and sewer projects include a variety of sizes and scopes for projects such as a fast track water main extension for a new Pilot Truck Travel Center in Santa Rosa, NM, a new well for the Village of San Juan on the Pecos River and a sewage lift station for the Village of Fort Sumner. He has collaborated on the design of a new well and on well rehabilitation to include pump replacement, variable speed well control, and SCADA control of multiple wells supplying multiple pressure zones.

BARTH BALLARD, IESNA

Role: Lighting Designer
Experience: 36 years
Availability: 10%

Barth has experience providing lighting design for the built environment. He is skilled in all areas of the lighting design process including project management, lighting control systems, specifications, schedules, photometric renderings and calculations, Title-24 compliance, LEED credits, cost estimates, submittal review, and construction documents. He also has experience designing energy efficient retrofits and implementing maximum lighting rebate incentives with appropriate local utility service providers. Barth's wealth of knowledge and skill make him a trusted designer and project manager for lighting design projects across all sectors.

NATHAN FORD, PE

Role: Drainage Studies
Experience: 22 years **Availability:** 20%

Nathan has dedicated his entire career to the flood control practice and is a recognized leader in his field. He is a technical expert in performing storm water management and engineering design that includes hydrologic and hydraulic analysis, creating HEC-1 and HEC-RAS models, master drainage planning, floodplain delineation, detention and retention basin design, and preparation of construction plans. Nathan's specialized qualifications include designing drainage systems and performing hydrologic and

hydraulic analyses and utilizing FLO-2D software on numerous projects that involve following applicable agency guidelines.

SEAN KYLE

Role: Wildlife Biologist
Experience: 12 years **Availability:** 10%

Sean is a wildlife biologist/ecologist with experience with natural resource issues involving the Endangered Species Act (ESA), Migratory Bird Treaty Act, Bald and Golden Eagle Act (MBTA), and National Environmental Policy Act (NEPA) as well as developing and implementing monitoring and inventory frameworks for sensitive wildlife and plants. He has experience working with energy companies including wind, solar, oil and gas, pipelines, telecommunications, and electric transmission and distribution lines on energy development projects, both as an agency representative and as a consultant. Prior to joining Stantec, Sean worked for the US Forest Service, Texas Parks and Wildlife Department, and the Western Association of Fish and Wildlife Agencies. Sean currently manages renewable energy projects in New Mexico, Arizona, Texas, and Oklahoma.

PAM MAPLES

Role: Environmental Scientist
Experience: 20 years **Availability:** 10%

Pam is a tenacious, diligent and dedicated professional with excellent attention to detail. She has experience in both regulatory and consulting roles, including experience in New Mexico, Arizona and the Navajo Nation. She specializes in designing and conducting assessments and cleanups. She has successful written USEPA Environmental Justice grant applications, Targeted Brownfields Assistance requests, and successfully secured two Time Critical Removal actions for the Navajo Tribe.

SHANTI CEANE, PE

Role: Construction Inspection
Experience: 21 years **Availability:** 20%

Shanti serves as the construction manager on transportation, stormwater, and water/wastewater utility projects across New Mexico. At Stantec, over the past 8 years, she served as a design technical lead before moving back into a construction management role about three years ago. She manages a large crew of construction observers and has completed construction management services on several local government and NMDOT projects across the state including such projects as the US 54 Reconstruction (17 miles), the Eddy County SE Loop (12 miles), the Ridge Road/Little Walnut Reconstruction in Silver City and Reconstruction of White Mountain Road in Mescalero Indian Reservation. Shanti is included in this proposal because of her extensive experience with management of large construction projects.

GERARDO TORRES, PLS

Role: Surveying
Experience: 17 years **Availability:** 20%

Gerardo, an NMSU graduate, is a licensed professional land surveyor with experience in land surveying, ranging from field work to project management. He previously managed the surveying operations for the State of New Mexico for several years, leading survey projects for a wide variety of clients. Gerardo has a broad base of experience in surveying, with work experience including large-scale right-of-way projects, topographic mapping, subdivision preparation, ALTA land title surveys, residential/condominium surveys, and construction surveys. He has worked with a broad array of equipment including terrestrial scanners, robotics, GNSS, drone flights, and conventional total stations.

GEOTECHNICAL ASSESSMENTS

Stantec will subcontract a local geotechnical engineering firm when necessary for design. We typically team with Western Technologies Inc, but is open to working with the City's preferred consultant.

EXPERT WITNESSES

We have multiple experts in all of the engineering specialty disciplines who have the expertise needed to be a technical witness in a judicial setting. Our entire team is at your disposal.

EVALUATION CRITERIA NO. 3

Performance of Firm

TAFT STREET ROADWAY, DRAINAGE, AND MULTI-USE PATH IMPROVEMENTS

CLIENT: VILLAGE OF COLUMBUS

The scope of work for the Taft Street Roadway, Drainage & Muti-Use Path Improvements will consist of roadway reconstruction to include unclassified excavation, subgrade preparation, approximately 6" of base course and 2.5" of asphalt for a 28' wide roadway surface, and valley gutters at each intersection to address drainage. The proposed improvements will also include new mountable curb and gutter along the east side of Taft. The entire corridor (approximately 2,550 LF) will include a paved multi use path along the west side of Taft Street. The improvements will provide a stabilized travel surface, improve existing drainage conditions, and greatly reduce the dust complaints of the residents who travel or live in the project area. The improvements will enhance the safety and quality of traffic and movement in the area by providing better roadway conditions for emergency vehicles and will better accommodate residential traffic.

Reference: Mayor Philip Skinner, 575-531-2663

DIAZ AVENUE STREET IMPROVEMENTS

CLIENT: TOWN OF HURLEY

Stantec assisted with grant writing, survey, design, and inspection of Diaz Avenue reconstruction. This project was constructed in two phases with a combination of state and federal funds. It included reconstruction of the existing roadway, widening to accommodate bicycle lanes, curb and gutter and sidewalk on both sides, and decorative lighting. Numerous side streets were re-graded, received curb and gutter with ADA facilities at the newly constructed corners. A parallel drainage swale had to be designed under each side street to convey the storm run-off and due to limited surfacing cover, some streets required a special trench drain structure with grates at side street intercept elevations. Additionally, Carrasco Avenue was improved with this project to have a reconstructed connection from US #180 to Diaz Avenue.

Reference: Lori Ortiz, Hurley Town Clerk, 575-537-2287

WELLFIELD SCADA SYSTEM

CLIENT: TOWN OF SILVER CITY

The distance from the furthest production well site to the distribution tank in Pinos Altos to the north is approximately 15 miles for Silver City's distribution system. Included in the system are nine production wells, four booster pump stations and twelve 12 water tanks. The hours of operation for the booster pump station from the Franks Wellfield was limited by the electric utility. A proprietary control system, utilizing a licensed radio frequency, were constructed in the 1990's but were inoperative. Line-of-sight communication is not available across the system.

In order to reduce the system operator's time and mileage and to generate additional cost savings through the operation of the major pumping components during off-peak hours, the Town of Silver City commissioned Stantec to design a wireless SCADA system onto the water production and distribution system. It was determined at the start of the project that an open-architecture communications system and solid state PLCs would be used in the system. The computer base station would be located at the office of the utility director in downtown Silver City. A notebook computer equipped with wireless communication capabilities would be carried by the system operator. Antennas for line-of-site communications were installed throughout the core of the system. The Franks Wellfield was located west of the Continental Divide and was shielded by the ridge top from the core of the system. A solar-powered radio repeater station with a 70 foot-tall antenna was constructed within an existing utility easement on the Divide to provide communication in and out of the Franks Wellfield. The Pinos Altos storage tank was located in a canyon to the north of Pinos Altos Mountain, also shielded from the main part of the system. A radio repeater station using directional antennas and a narrow range frequency filter was mounted on an existing communications tower on south Pinos Altos Mountain to provide communications to that tank.

Reference: Robert M. Esqueda, Utilities Director, 575-534-6355

Since 1999 I have worked with Stantec on the majority of public works projects completed by the Town of Silver City. They do high quality work and respond quickly and cost effectively to our engineering needs. They have proven their capability to complete large and complex projects on-time and within our budget.

Peter Pena, Public Works Director, Town of Silver City

CITY OF LAS CRUCES

PROJECT ASSIGNMENT AGREEMENT

23-24-051 GENERAL ENGINEERING SERVICES

PROJECT NAME

Pursuant to terms and conditions of City of Las Cruces (CITY) Contract No. 23-24-051 dated June 1, 2024 between the CITY and Stantec Consulting Service, Inc. (ENGINEER), as amended and incorporated herein by reference, the City and Contractor hereby agree on this _____ day of _____, 20___, as follows:

1. In a satisfactory and proper manner, the ENGINEER shall perform SERVICES as proposed in response to the CITY's RFP No. 23-24-051 and ENGINEER's proposal as set forth in ATTACHMENT A attached hereto.

2. The estimated completion date is number days after a Notice to Proceed is issued by the CITY to the ENGINEER.

3. In consideration for the satisfactory completion of the work agreed to herein, compensation shall be made in the amount of $dollars.cents, plus NMGRT. Invoices issued by the ENGINEER shall be made monthly / upon completion of project with payment by the CITY being made within 30 days upon receipt of undisputed invoice.

CITY OF LAS CRUCES

PROFESSIONAL SERVICES AGREEMENT

THIS AGREEMENT, made and entered into on this _____ day of _____, 2024 by and between the City of Las Cruces, New Mexico, hereinafter called “CITY” and Terracon Consultants, Inc., of 4450 Bataan Memorial East, Las Cruces, NM, 88011, hereinafter called “CONTRACTOR”.

1. PROJECT DESCRIPTION
General Engineering Services on an as needed basis via Project Assignment Agreements (Attachment “A”) during the term of this AGREEMENT.

2. SCOPE OF SERVICES
In a satisfactory and proper manner, the CONTRACTOR shall perform SERVICES, as proposed in response to the CITY’S RFP No. 23-24-051, as set forth in Exhibit A, attached hereto and made a part of this Agreement.

The CONTRACTOR is authorized to extend the same terms and conditions of this Agreement to other governmental entities conditioned upon the procurement laws and regulations of those entities. The CITY shall not be a party nor have any liability relating to such extensions.

3. APPROPRIATIONS
The terms of this Agreement are contingent on sufficient appropriations and authorization being made by the City Council for the performance of this Agreement. If sufficient appropriations and authorizations are not made by the City Council, this Agreement shall terminate upon written notice given by the CITY to CONTRACTOR. The CITY’S decision as to whether sufficient appropriations and authorizations exist shall be accepted by CONTRACTOR and shall be final.

4. COMPENSATION
The CITY shall compensate CONTRACTOR for the performance of SERVICES under this Agreement an amount agreed to for each assigned project, plus applicable taxes. CONTRACTOR shall perform the SERVICES upon receipt of a purchase order or written Notice to Proceed for each assigned project from the CITY. The CITY cannot authorize costs to be incurred prior to such written Notice to Proceed. CONTRACTOR shall submit invoices upon completion of the project. CITY shall pay invoices Net 30 days upon receipt of undisputed invoice.

CONTRACTOR is responsible for payment of State of New Mexico Gross Receipts Tax levied on the amounts payable under this Agreement. CONTRACTOR agrees to comply with all federal and state tax payments and report all items of gross receipts as income from the operations of its business.

5. DEVOTION OF ADEQUATE TIME
CONTRACTOR will devote the necessary hours each week to the performance of projects that are required by the CITY and it will serve the CITY diligently and faithfully,

and according to its best ability in all respects and will promote the best interests of the CITY.

6. TERM AND SCHEDULE
This Agreement shall become effective on June 1, 2024 for a term of 5 years through May 31, 2029.

CONTRACTOR shall perform the SERVICES in accordance with the time set forth as agreed upon by the CITY and CONTRACTOR and as agreed to for each project assigned under the terms of this Agreement.

7. EXTENSIONS, CHANGES, AND AMENDMENTS
This Agreement shall not be extended, changed, or amended except by instrument in writing executed by the parties. The CITY shall not be liable for payment of any extra services nor shall CONTRACTOR be obligated to perform any extra services except upon such written agreement. Such written approval shall indicate the date said extension, change, or amendment is effective and shall be signed by the parties to this Agreement. In the event that the parties cannot reach agreement as to a particular change, the issue shall be resolved pursuant to Article 21.

8. CHANGES AND EXTRA SERVICES BY THE CITY
The CITY may make changes within the general scope of the SERVICES plus may also request CONTRACTOR to perform other extra services not incorporated within the Services set forth in this Agreement. If the CONTRACTOR is of the opinion that such change causes an increase or decrease in the cost and/or the time required for performing the changes or other services required by the City, CONTRACTOR shall so notify the CITY of that fact within five (5) business work days from the date of receipt of change by the CITY. The CITY shall provide written response to the CONTRACTOR within five (5) business work days from the date of receipt of CONTRACTOR’S written notification.

9. CHANGES AND EXTRA SERVICES BY THE CONTRACTOR
In the event a condition is identified by the CONTRACTOR which, in the opinion of the CONTRACTOR, changes the services, costs, and/or time required for performance under this Agreement, the CONTRACTOR shall provide written notification to the CITY within five (5) business work days of such identification. The CITY shall respond in writing to such notification within five (5) business work days from the date of receipt of CONTRACTOR’S notification.

10. DELAYS
In the event that performance of SERVICES is delayed by causes beyond reasonable control of CONTRACTOR, and without the fault or negligence of CONTRACTOR, the time and total compensation for the performance of the SERVICES may be equitably adjusted by written agreement to reflect the extent of such delay. CONTRACTOR shall provide the CITY with written notice of delay pursuant to Article 9 including therein a description of the delay and the steps contemplated or actually taken by

CONTRACTOR to mitigate the effect of such delay. The CITY will make the final determination as to reasonableness of delays.

11. TERMINATION
This Agreement may be terminated by either party hereto upon fifteen (15) calendar days written notice in the event of substantial failure by the other party to perform in accordance with the terms of this Agreement through no fault of the terminating party. This Agreement may also be terminated by the CITY for its convenience or because the PROJECT has been permanently abandoned, but only upon fifteen (15) calendar days written notice to CONTRACTOR.

In the event of termination, CONTRACTOR shall be compensated for all services performed and costs incurred up to the effective date of termination for which CONTRACTOR has not been previously compensated.

Upon receipt of notice of termination from the CITY, CONTRACTOR shall discontinue the SERVICES unless otherwise directed and upon final payment from the CITY deliver to the CITY the required number of copies of all data, drawings, reports, estimates, summaries, and such other information and materials as may have been accumulated by CONTRACTOR in the performance of this Agreement, whether completed or in process.

12. RECORDS AND AUDITS
CONTRACTOR will maintain records indicating dates, length of time, and services rendered. The CITY has the right to audit billings both before and after payment, and contest any billing or portion thereof. Payment under this Agreement does not foreclose the CITY'S right to recover excessive or illegal payments. CONTRACTOR will retain records for five (5) years after the completion of the project.

13. DISCLOSURE AND OWNERSHIP OF DOCUMENTS, PRODUCTS, DESIGN, ELECTRONIC FILES
All technical data, electronic files, and other written and oral information not in the public domain or not previously known, and all information, electronic files, and data obtained, developed, or supplied by the CITY will be kept confidential and CONTRACTOR will not disclose to any other party, directly or indirectly, without the CITY'S prior written consent unless required by lawful order.

All technical data, electronic files, products developed, operational parameters, blueprints, and other information and work of the CONTRACTOR shall be the sole property of the CITY and shall be delivered to the CITY when requested and at the end of the Agreement.

14. INDEPENDENT CONTRACTOR
CONTRACTOR represents that it has, or will secure, at its own expense, all personnel required in performing the SERVICES under this Agreement. Such personnel shall not be employees of, nor have any contractual relationship with the CITY. CONTRACTOR,

consistent with its status as an independent contractor, further agrees that its personnel will not hold themselves out as, nor claim to be officers or employees of the CITY by reason of this Agreement.

To the extent that CONTRACTOR employs any employees, CONTRACTOR shall be solely responsible for providing its own form of insurance for its employees and in no event shall CONTRACTOR's employees be covered under any policy of the CITY.

CONTRACTOR'S retention hereunder is not exclusive. Subject to the terms and provisions of this Agreement: (i) CONTRACTOR is able, during the Term hereof, to perform services for other parties; and (ii) CONTRACTOR may perform for its own account other professional services outside the scope of this Agreement.

CONTRACTOR is and shall be an Independent Contractor and shall be responsible for the management of its business affairs. In the performance of the work under this Agreement, CONTRACTOR will at all times be acting and performing as an Independent Contractor, as that term is understood for federal and state law purposes, and not as an employee of the CITY. Without limitation upon the foregoing, CONTRACTOR shall not accrue sick leave, jury duty pay, retirement, insurance, bonding, welfare benefits, or any other benefits, which may or may not be afforded employees of the CITY. CONTRACTOR will not be treated as an employee for purposes of: Workers' Compensation benefits; the Federal Unemployment Tax Act; Social Security; other payroll taxes, federal or any state income tax withholding; or the employee benefit provisions described in the Internal Revenue Code of 1986, as amended. Neither the CITY, nor its agents or representatives, shall have the right to control or direct the manner, details or means by which CONTRACTOR accomplishes and performs its services. Nevertheless, CONTRACTOR shall be bound to fulfill the duties and responsibilities contained in the Agreement.

15. NO JOINT VENTURE OR PARTNERSHIP

Nothing contained in this Agreement shall create any partnership, association, joint venture, fiduciary or agency relationship between CONTRACTOR and CITY. Except as otherwise specifically set forth herein, neither CONTRACTOR nor CITY shall be authorized or empowered to make any representation or commitment or to perform any act which shall be binding on the other unless expressly authorized or empowered in writing.

16. ASSIGNMENT

CONTRACTOR shall perform all the services under this Agreement and shall not assign any interest in this Agreement or transfer any interest in same or assign any claims for money due or to become due under this Agreement without the prior written consent of the CITY.

17. INSURANCE
CONTRACTOR shall obtain and maintain insurance at its own cost and expense during the life of this Agreement, and shall require Subcontractors, if any, to maintain during the life of his subcontract:

1. Commercial General Liability Insurance
   a. $1,000,000 per occurrence / $2,000,000 aggregate
   b. Coverage must include premises and operations, products and completed operations, and personal and advertising injury.
   c. The City of Las Cruces must be named as an Additional Insured for all coverages listed above on endorsements acceptable to the City.
   d. Coverage must be primary and non-contributory.
   e. Coverage must be per project or per location.
   f. Coverage must be on an occurrence form.
   g. Subrogation must be waived.
2. Commercial Auto Liability
   a. $1,000,000 per occurrence
   b. Coverage must be for “owned, leased, hired, and non-owned autos” or “any autos.”
3. Workers’ Compensation and Employers Liability
   a. Statutory Limits
   b. Employer liability – $1,000,000 each accident, $1,000,000 each employee by disease, $1,000,000 policy limit
   c. Subrogation must be waived.
4. Professional Liability: $1,000,000 per claim

Endorsements for additional insured coverage and waivers of subrogation must be provided as a condition of this Agreement and shall be noted on the certificate.

CONTRACTOR shall furnish the CITY with a certificate(s) of insurance showing CONTRACTOR and Subcontractors, if any, have complied with this Article. The CONTRACTOR shall provide insurance certificates before work is to start on the project and shall provide the CITY thirty (30) days written notification of cancellation of such policies.

18. INDEMNITY AND LIMITATION
CONTRACTOR shall indemnify, defend, and hold harmless the CITY from and against any and all claims, suits, actions, judgments, demands, losses, costs, expenses, damages, and liability caused in whole or in part by, resulting in whole or in part from, or arising in whole or in part out of the negligent acts, errors, or omissions of CONTRACTOR, its officers, employees, agents, or representatives in the performance of SERVICES under this agreement.

19. APPLICABLE LAW
This Agreement and the rights and obligations of the parties shall be governed by and construed by the laws of the State of New Mexico applicable to Agreements between

New Mexico parties made and performed in that state, without regard to conflicts of law principles. Venue shall be in the Third Judicial District, State of New Mexico.

CONTRACTOR shall abide and be governed by all applicable state law, CITY ordinances, and laws regarding the CONTRACTOR'S services or any work done pursuant to this Agreement, including anti-discrimination.

20. BREACH
In the event CONTRACTOR breaches any obligation contained in this Agreement, prior to instituting any action or dispute resolution procedure, the CITY shall give CONTRACTOR written notice of such breach. In the event CONTRACTOR fails to remedy the breach within five (5) working days of receiving such written notice, the CITY, at its sole discretion, without any obligation to do so and in addition to other remedies available under applicable law, may remedy CONTRACTOR'S breach and recover any and all costs and expenses in so doing from CONTRACTOR.

21. DISPUTE RESOLUTION
In the event that a dispute arises between CITY and CONTRACTOR under this Agreement or as a result of breach of this Agreement, the parties agree to act in good faith to attempt to resolve the dispute.

22. NOTIFICATION
All notices required or permitted under this Agreement shall be in writing and shall be deemed sufficiently served if served by Registered Mail addressed as follows:

TO CITY:	City of Las Cruces PO Box 20000 Las Cruces, NM 88004 ATTENTION: Tony Trevino
With Copies to:	City Attorney Purchasing Manager
TO CONTRACTOR:	Terracon Consultants, Inc. 4450 Bataan Memorial East Las Cruces, NM 88011 ATTENTION: Ruben Solis-Hernandez

23. SCOPE OF AGREEMENT
This Agreement incorporates all of the agreements, covenants, and understandings between the parties hereto concerning the subject matter hereof and that all such covenants, agreements, and understandings have been merged into this written agreement. No prior agreement or understanding verbal or otherwise of the parties or their agents shall be valid or enforceable unless embodied in this agreement.

24. SEVERABILITY
The parties agree that each provision of this Agreement is severable and the invalidity or unenforceability of any one or more of the provisions of this Agreement shall not affect the validity or enforceability of any other provision of this Agreement, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

25. CONFLICT OF INTEREST
CONTRACTOR represents and warrants that CONTRACTOR has no business, professional, personal, or other interest, including, but not limited to, the representation of other clients, that would conflict in any manner or degree with the performance of its obligations under this Agreement. If any such actual or potential conflict of interest arises under this Agreement, CONTRACTOR shall immediately inform the CITY in writing of such conflict. If, in the reasonable judgement of the CITY, such conflict poses a conflict to and with the performance of CONTRACTOR'S obligations under this Agreement, or is otherwise a violation of the CITY'S current policy or ordinances, then the CITY may terminate the Agreement immediately upon written notice to CONTRACTOR; such termination of the Agreement shall be effective upon the receipt of such notice by CONTRACTOR.

EXHIBIT A
SERVICES

A. Project Assignments

A Project assignment is initiated by the City providing the selected Engineering firm(s) a detailed project description, including scope of work and any other special instructions needed by the Engineering firm(s) to prepare all deliverables as requested. The awarded Engineering firm(s) shall provide engineering services that may include, but not be limited to, the following:

1. Master Planning
2. Structural design of buildings, retaining walls, etc.
3. Roadway, transportation, and parking lot design
4. Site development (drainage and grading design)
5. Electrical design (wells, booster stations, lift stations, odor control stations, building electrical system design)
6. Computer network analysis for Gas (GasWork), Water (InfoWater), and Wastewater (InfoSewer). The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility
7. Supervisory Control and Data Acquisition (SCADA) design
8. Mechanical design, gas system design, plumbing and HVAC design
9. Water, wastewater and natural gas utility system design and analysis
10. Traffic Impact Studies and Transportation Modeling Studies
11. Photometrics/street lighting design
12. Drainage Studies, including FEMA Flood Studies
13. Storm drainage
14. Solid waste studies, landfill system design and analysis
15. Environmental surveys, assessments monitoring and management, such as indoor air quality, asbestos, mold, and other related services for the City
16. Geotechnical Assessments, such as soil and groundwater testing for contamination and remediation, and other related services for the City
17. Expert witness in a judicial and/or quasi-judicial setting.
18. Project Management
19. Construction Inspection

B. Project Assignment Agreements

A Project Assignment Agreement (a template of which is incorporated herein as ATTACHMENT “A”) will be negotiated and executed on a case-by-case basis for each specific project, and will include a cost proposal from the Engineering firm(s) proposing to do the work. The cost proposal may utilize one of the following pricing formats:

1. Lump Sum
2. Unit pricing to include:
    a. Hourly rate for various types of services requested by the City
    b. Charges for miscellaneous items such as blueprints, data, discs, rental of special equipment, etc.
    c. A statement of the billing procedures including minimum billing units, if any.
    d. Cost of sub-consultants, if any

3. An alternative unit cost breakdown

C. Deliverables
Each project contract will require a list of deliverables, schedule/timeline and cost. The Engineer may be required to supply to the City an of the following items, when specified and as requested on the Scope of Work for each individual project.
1. Preliminary report containing schedule of work and cost estimate.
2. Construction drawings and documents. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility. Provide hard copies and PDF format of the construction plans for Purchasing Section use.
   a. As-built drawings on electronic media and reproducible prints. Electronic drawings shall be submitted via City approved methods drawn in AutoCAD format. All horizontal and vertical location datum information shall be coordinated with the City Surveyor. The utility location information shall be tied to project control monuments and referenced to project construction stationing. The project control survey shall be certified by a New Mexico Registered Land Surveyor. Metadata or “data about the data” shall be submitted with each as-built electronic file, preferably as a separate text file on the electronic submittal media, and shall include:
      - Name, address, and phone number of the responsible land surveyor.
      - Date of completion of survey.
      - Equipment used to conduct the survey.
      - Horizontal and vertical control marks used to tie the survey to the City approved control.
      - Transformation factors needed to reduce Ground (local coordinate system) to Grid and combined scale factor used.
   b. “RECORD DRAWINGS” shall be clearly labeled on each sheet.
3. Computer network analysis for gas, water, and wastewater shall be provided to the City in appropriate electronic format. It shall include the entire model, including changes and a text summary (report) of the network analysis that includes assumptions, procedures, and results, and any graphics that clarify the analysis. The Engineering firm(s) shall verify the report format with the City. The computer network analysis shall be provided using the software listed below. The Engineering firm(s) shall verify the latest software, version, and update in use by the City to ensure compatibility.
   a. Computer network analysis for Gas: GasWork
   b. Computer network analysis for Water: InfoWater
   c. Computer network analysis for wastewater: InfoSewer
   d. Other design computer programs as approved by the City
4. Project reports.
5. Any other item specified in the contract for that project.

CI. The selection of an Engineer for a specific project shall be based on experience with similar projects, references, performance in similar projects, and availability. This will include the ability to meet schedules, cost control, and responsiveness to client.

CII. The Engineer shall have an engineering staff on-site everyday who is responsible, on behalf of the Engineer, for providing timely completion and response for performance of

the terms of each Project Assignment Agreement during the progress of each individual project. Any deviation from this requirement is at the discretion of the City and must be approved in writing by the City prior to the start of any individual project.

RFP COMPLIANCE DECLARATION

RFP TITLE: **General Engineering Services**

RFP NO.: **23-24-051**

DUE DATE/TIME: **February 27, 2024 / 4:00 p.m.**

In compliance with the requirements of this RFP, I, the undersigned, offer and agree to furnish any or all materials and/or services to the City of Las Cruces within the time agreed.

I further certify that this company has not been debarred, suspended, or otherwise made ineligible for participation in Federal Assistance programs under Executive Order 12549 Debarment and Suspension as described in the Federal Rules and Regulations.

Receipt of Addenda Nos.: 1 is hereby acknowledged (where none received, place a zero in this space)

STATE OF NEW MEXICO

MAGGIE TOULOUSE OLIVER

SECRETARY OF STATE

Certificate of Good Standing and Compliance

IT IS HEREBY CERTIFIED THAT:

TERRACON CONSULTANTS, INC.

2437846

the above named entity, a Corporation authorized under the laws of Delaware, is duly authorized to transact business in New Mexico as a Foreign Profit Corporation, under the

Business Corporation Act **53-17-1 to 53-17-20 NMSA 1978**

having filed its Application for Authority on March 9, 2004, and Certificate of Authority issued as of said date.

It is further certified that the fees due to the Office of the Secretary of State which have been assessed against the above named entity have been paid to date and the entity is in good standing and duly authorized to transact business as its existence has not been revoked in New Mexico. This certificate is not to be construed as an endorsement, recommendation, or notice of approval of the entity's financial condition or business activities and practices.

Certificate Issued: **July 14, 2020**

In testimony whereof, the Office of the Secretary of State has caused this certificate to be signed on this day in the City of Santa Fe, and the seal of said office to be affixed hereto.

Maggie Toulouse Oliver

Maggie Toulouse Oliver
Secretary of State

Certificate Validation #: 0037870

A certificate issued electronically from the New Mexico Secretary of State's office is immediately valid and effective. The validity of a certificate may be established by viewing the **Certificate Validation** option on the Business Filing System at https://portal.sos.state.nm.us/bfs/online and following the instructions displayed under **Certificate Validation.**

A. Technical Proposal Content

The respondent's Technical Proposal shall include the following items, and in the sequence presented:

1. To address Evaluation Criteria No. 1 (Technical approach) below

a. Provide description of the proposed technical approach of all professional, technical and customary services provided

Please refer to page 3, question d for this information.

b. Major tasks to be accomplished

Terracon has a robust internal system to ensure all deliverables are completed on or ahead of schedule and at or below budget. Terracon's Project Management Dashboard allows project managers and APRs quick access to critical project metrics including upcoming schedule milestones and financial metrics including remaining revenue, revenue burn rate, WU/(WD), WIP, and AR. The APRs can also quickly review and monitor the progress of their assigned projects. The PM Dashboard is an efficient way to track key project metrics and identify when projects are reaching critical milestones requiring reviews, deliverables to clients, or other management actions. An email notification system will automatically notify the PM, APR, and other stakeholders when a new project is set up in ProjectXchange, including its contracted fee, schedule, and planned WU/(WD). The email directs the PM to schedule a kickoff meeting as the first critical juncture and provides GIS-based information for any project within a quarter-mile radius of the project site.

Environmental deliverables include reports specific to the service provided. In general, reports will include:

- Phase I Environmental Site Assessments (ESA) Report, which include:
  - Review of physical setting
  - Historical uses of the site
  - Review of regulated facilities on and near the site
  - Site visit with pertinent observations and photographs.
  - Findings/Recommendations regarding the presence/absence of Recognized Environmental Conditions (RECs)

- Phase II Subsurface Investigations Report which include:
  - Documentation of field activities;
  - Site plan showing pertinent site features;
  - Soil boring/monitor well logs;
  - Analytical laboratory results;
  - Data evaluation and presentation of findings; and,
  - Recommendations concerning further action, if necessary.

- Asbestos, Lead-based Paint and Mold Assessment/Consulting Services Report which include:
  - Site visit and inspection of suspect/impacted materials by State-licensed staff
  - Collection of samples in accordance with applicable federal, state and local regulations
  - Analysis of samples by accredited laboratories
  - Preparation of report discussing findings and recommendations

- Wetlands, Threatened/Endangered Species, Cultural Resource (Archaeology) Assessment Reports, which include:
  - Site visit to evaluate site conditions, possibly including GIS-verified boundary of potentially regulated areas

- Evaluation of wetlands, T/E species and/or cultural resources with regard to applicable regulations
- Preparation of report discussing findings, regulatory constraints and potential solutions, possibly including coordination with the US Army Corps of Engineers, US Fish and Wildlife, Texas Historical Commission and/or Texas Parks and Wildlife

- TCEQ Geologic Assessments and Void Mitigation Consulting Reports, which include:
  - Site-visit to evaluate site geology and presence/absence of "recharge features" which may affect location of stormwater management structures and preparation of State-formatted Geologic Assessment forms
  - Ground Penetrating Rader (GPR) to help determine presence/limits of subsurface anomalies, piping, utilities, etc.

Geotechnical engineering project deliverables include a final report outlining:

- Boring location plan.
- Boring logs with soil stratification.
- Subsurface exploration procedures.
- Encountered soils conditions.
- Summarized laboratory data.
- Groundwater levels observed during and at completion of drilling.
- Design values for allowable bearing capacity for foundations.
- Estimated settlement of foundations.
- Lateral earth pressure and drainage for site retaining walls.
- Seismic Site Classification (based on our findings and 2012 IBC).
- Pavement thickness and material component guidelines for movements and building pads including reduction of heave potential.
- Subgrade preparation / earthwork recommendations.

Construction materials testing and inspection deliverables includes reports for each material tested. Reports list the description, source and sample location of the materials tested, date, time, testing technician's name, test procedure, results of test and indication if test was within or outside the acceptable range for that particular test. Materials testing and Special inspection services typically include:

- Earthwork Observation/Testing
- Drilled Piers Instillation Observation
- Reinforcing Steel Observation
- On-Site Concrete Observation /Testing
- Post-Tensioning Observation
- Structural Masonry Observation/Testing
- Structural Steel Observation/Testing
- Fire Stop Systems and Fire Proofing Observation

c. A detailed statement of services to be provided under each task, and

ENVIRONMENTAL OVERVIEW

Negotiating the complexities of environmental issues can be challenging and time consuming. Terracon relies upon demonstrated experience and knowledge of local conditions and regulations to deliver solutions that are timely, practical, and make good business sense. Terracon's professionals have a thorough understanding of local conditions and regulations and know how to effectively manage the potential risks presented by hazardous materials and chemical releases that have impacted a site. In addition, we further maintain and develop relationships with regulatory agencies including the EPA, USACE, US FWS, THC, TDSHS, and TCEQ. and other state and local agencies in order to act as an advisor for owners and managers to ensure communications are maintained in the best manner possible. You can trust us to provide you with the most reliable information and the most reliable solutions to keep your projects compliant. We

routinely develop and implement environmental solutions in support of local municipalities and state agencies. Terracon's environmental services include (right side):

ASBESTOS AND HAZARDOUS BUILDING MATERIALS

When renovating or demolishing existing properties, building owners, property managers, developers, general contractors, healthcare facilities, school districts, and local governments alike face potential risks, including but not limited to:

- Asbestos-Containing Materials (ACM)
- Polychlorinated Biphenyls (PCBs)
- Oil-containing devices
- Fluorescent bulbs
- Underground/aboveground storage tanks
- Impacted soil and groundwater
- Lead-Containing Paint (LCP)
- Ozone Depleting Chemicals (ODCs)
- Mercury switches
- Hazardous materials
- Mold
- Radioactive sources

ASBESTOS

Terracon's team of asbestos professionals are full accredited by the U.S EPA to provide a full range of asbestos services under the National Emission Standards for Hazardous Air Pollutants (NESHAP). Our experienced provide comprehensive asbestos consulting beginning with the asbestos inspection and continuing through the process of abatement design and project development, adding project management and quality assurance air monitoring during the abatement efforts and ending with the requisite documentation process.

MOLD

Undesirable conditions such as odors, occupant perceptions of poor air quality, and visible mold growth are generally indicators of a breach or failure in one or more building systems. Improperly functioning heating, ventilating, and air conditioning (HVAC) systems and deficiencies in building operation, maintenance, design, or construction can contribute to excess moisture accumulation, building-related health complaints, and indoor mold growth. Terracon utilizes a multi-disciplinary approach to assess and address the root causes of mold and indoor air quality (IAQ) problems. Our industrial hygiene staff focuses on recognizing and evaluating potential hazards that can affect employees or occupants. We can also draw upon the expertise of our facilities engineering group to identify building deficiencies and operations that can indicate potential health concerns. Working together, these specialists can pursue the causes of complaints and provide practical recommendations to correct building-related mold/IAQ problems. Terracon's mold specialists are accredited by the U.S. Environmental Protection Agency.

LEAD-BASED PAINT

Terracon's Risk Assessors/Inspectors perform LBP risk assessments and inspections in accordance with state, the USEPA and/or the U.S. Department of Housing and Urban Development regulations. Inspections are performed in buildings utilizing an X-ray fluorescence analyzer (XRF) to test painted surfaces in each sample location. XRF technology is a non-invasive, non-destructive means to determine presence of lead in paint, even in a painted surface several layers below the surface. Terracon has the expertise to also test surface dust, water, and bare soil for lead content. The purpose of a lead risk assessment is to identify lead hazards present in housing constructed prior to 1978 or child occupied facilities as defined in federal law 24 CFR 35. Information is gathered from building occupants regarding use patterns within the subject property to identify potential sources of lead contamination. Terracon has extensive experience

in the development of lead abatement plans for various types of private and public facilities. These plans have included buildings or structures of historical significance requiring an innovative approach to complete the remediation while preserving the historical components of the facility.

NATIONAL ENVIRONMENTAL POLICY ACT DOCUMENTATION

Our experience has shown that a carefully considered review of environmental concerns can provide an effective framework for both development and conservation of natural and cultural resources. We have assisted clients with natural and cultural resources management through the performance of multi-disciplined analyses, planning, and design projects. Terracon employs multidisciplinary staff who specialize in NEPA assessments and documents, Waters of the U.S. determinations/delineations, threatened and endangered species habitat assessments, cultural resources assessments, U.S. Army Corps of Engineers permitting and mitigation plan development, and other specific studies and assessments pertinent to NEPA (noise, air quality, hazardous materials). Terracon performs extensive preliminary desktop analysis to evaluate potential impacts to the applicable public interest factors to be assessed as appropriate in accordance with NEPA. Terracon then performs early agency consultation as required in an effort to get concurrence and/or solicit comments from the appropriate regulatory agencies. Terracon then evaluates the potential impacts to the human and natural environments in the preparation of required NEPA documents (Categorical Exclusions, Environmental Assessments, and Environmental Impact Statements).

ARCHEOLOGICAL INVESTIGATIONS

Terracon's cultural resources management staff has been a vital component of our environmental service line since 2003. With staff specially trained in the areas of archaeology, architectural history, human osteology, faunal analysis, and historic preservation, the cultural resource management group helps navigate the complexities of federal and state regulations to bridge the requirements of cultural resource laws with the business needs of our clients. In addition to full-scale archaeological and historic preservation studies, we assist clients with tribal consultation, cemetery studies, preparation of agreement documents (e.g., Memorandum of Agreements [MOAs], Programmatic Agreements [PAs], and Memorandum of Understandings [MOUs], public education and outreach, and more.

HAZARDOUS WASTE MANAGEMENT

Terracon has broad experience in evaluating and resolving the regulation and management of hazardous and universal wastes generated by conditionally exempt, small and large quantity generators. Utilizing our professional staff of regulatory compliance specialists, Terracon conducts on-site assessments of operations and waste streams then performs waste determinations to identify hazardous wastes and amount of each stream generated on a monthly basis. In turn, Terracon will consult with the facility on applicable generator status and the reporting and recordkeeping requirements that their status entails. Terracon will ensure the facility obtains the correct status registration and can assist in development of a waste tracking system to ensure continued compliance.

AIR QUALITY MONITORING, TESTING, AND PERMITTING

We have conducted Indoor Air Quality (IAQ) surveys to evaluate workplace areas for Mold, Common Indoor Allergens, Particulate Matter, Volatile Organic Compounds (VOCs), and other air quality parameters. To assist with water intrusion conditions and mold-related problems, Terracon has a variety of automated spore trap sampling equipment and Infrared (IR) Cameras. Terracon utilizes a multi-disciplinary approach to assess and address the root causes of IAQ problems. Our industrial hygiene staff focuses on recognizing and evaluating potential hazards that can affect employees or occupants. We can also draw upon the expertise of our facilities engineering group to identify building deficiencies and operations that can indicate potential health concerns. Working together, these specialists can pursue the causes of complaints and provide practical recommendations to correct building-related IAQ problems.

STORMWATER MANAGEMENT

Municipalities are required to obtain either a Phase I or Phase II Municipal Separate Storm Sewer System based on their size (small, medium or large). Stormwater requirements will vary based on whether the municipality is a small (Phase II) or medium/large (Phase I) MS4. Terracon's team of experienced environmental compliance staff will assist the City in the management and maintenance of its Stormwater Management Program (SWMP) under the Phase I MS4 permit. This will include consultation on best management practices, assistance in sampling and monitoring of stormwater, conducting and documenting required inspections, and reporting and recordkeeping requirements. Terracon can also assist in the renewal of the Phase I MS4 Permit and SWMP when applicable.

PHASE I ENVIRONMENTAL SITE ASSESSMENTS

Terracon conducts a variety of assessments ranging from ASTM Phase I environmental site assessments (ESAs) to extensive subsurface investigations. Our ability to provide the full range of assessment and investigation services is enhanced by our complete field service capability, as well as our diverse staff of professionals. The purpose of an ESA is to identify recognized environmental conditions (RECs) that may impact the property. Phase I activities typically involve the collection and review of information concerning: physical setting, regulatory records, historical use, site and adjoining property reconnaissance, interviews with persons/agencies familiar with the site, and previous report review.

GENERAL ENVIRONMENTAL SERVICES

Terracon's regulatory compliance specialists understand the dynamics behind complex regulations and how they affect your facility. Our team of experienced engineers and regulatory compliance specialists have the skills and knowledge to evaluate your facility to assess applicability of federal, state, and local regulations, including the Resource Conservation and Recovery Act, Superfund Amendments and Reauthorization Act, and Emergency Planning and Community Right to Know Act, providing you with the content knowledge experts to save you time in maintaining compliance of your facility. We help our clients determine how to best comply with a single complex regulatory requirement or provide a multimedia assessment of an entire facility. Whether developing and constructing a new facility, or operating an existing one, owners must meet their specific regulatory requirements to ensure their businesses can operate uninterrupted. Terracon provides timely, and accurate services to assist clients in obtaining and maintaining facility compliance. Our goal is to develop a cost-effective compliance program that will allow you to document compliance with applicable regulatory permits and requirements. In addition, we further maintain and develop relationships with regulatory agencies including the EPA, and state and local agencies in order to act as an advisor for owners and managers to ensure communications are to provide you with the most reliable information and the most reliable solutions to keep your facility compliant. Terracon's regulatory compliance services include:

- Limited environmental compliance assessments
- Spill Prevention Control and Countermeasure (SPCC) and Facility Response Plans (FRP)
- SARA Title III or EPCRA Reporting (Tier II Chemical Inventory Report)
- Annual Compliance Training
- GIS mapping services
- Pollution Prevention/Waste Minimization
- Environmental Compliance Management System

GEOTECHNICAL ENGINEERING

Design and construction of functional, cost-effective structures require a thorough understanding of local soil, rock, and groundwater conditions. Terracon provides safe and quality-focused in-house exploration and geotechnical services to support both the design phase of a project, as well as the construction process, if needed to resolve ground-related construction issues.

Terracon is proud to have its own drilling equipment and exploration staff with combined decades of field experience. Our nationwide engineering bench strength and depth of knowledge of the regional geologic and soil conditions is reflected in our vast geotechnical database that spans almost three decades, which provides an additional level of confidence to our reports. Our in-house truck-mounted, CME 75 drill rig is available locally to perform subsurface exploration borings and sampling. Terracon offers the necessary methods of subsurface sampling and data acquisition to meet client needs if necessary (including drilling in loose sands, very dense and hard deposits, or shallow perched groundwater conditions). If needed, our services may include specialized field testing, such as on-site percolation testing for on-site storm-water ponds.

The typical phases of a geotechnical study include: Site Exploration, Laboratory Testing and Engineering Analysis. Site exploration will primarily consist of soil borings (depth and spacing determined based on size / type of installation, loads and area) sampled with various methods depending on the geology of the site. Laboratory testing will typically focus on determining soil classification in accordance with Unified Soil Classification System, physical properties, and strength properties.

Our geotechnical services typically include:

- Subsurface exploration and testing
- Foundation analysis and design recommendations
- Groundwater control recommendations
- Pavement subgrade evaluation and design recommendations
- In-situ testing and performance monitoring
- Recommendations for earth structures, slopes, and retention systems (if applicable)
- Soil stabilization and ground improvement (where applicable)
- Dynamic analysis and evaluation (if applicable)

With more than 350 geotechnical engineers and one of the largest drilling fleets in the country, Terracon is well positioned to deliver quality, responsive, and cost-effective geotechnical engineering services, regardless of project size.

MATERIALS TESTING (CONSTRUCTION INSPECTION)

Proper selection, quality, workmanship, and performance of construction materials play a vital role in ensuring that today's buildings and infrastructure perform adequately over long-time periods. We work with clients to minimize material replacements, reduce the likelihood of deterioration, avoid potential failures, and investigate and evaluate construction materials related problems and failures when they do occur.

Terracon's materials testing services include:

- Construction Quality Assurance/Quality Control
- Pavement Materials Engineering
- Structural Steel and Nondestructive Testing
- Field and Laboratory Observation & Inspection
- Materials Engineering
- On-Site Observation and Monitoring
- Materials Mix Design, Evaluation, Verification
- Materials Evaluation and Selection

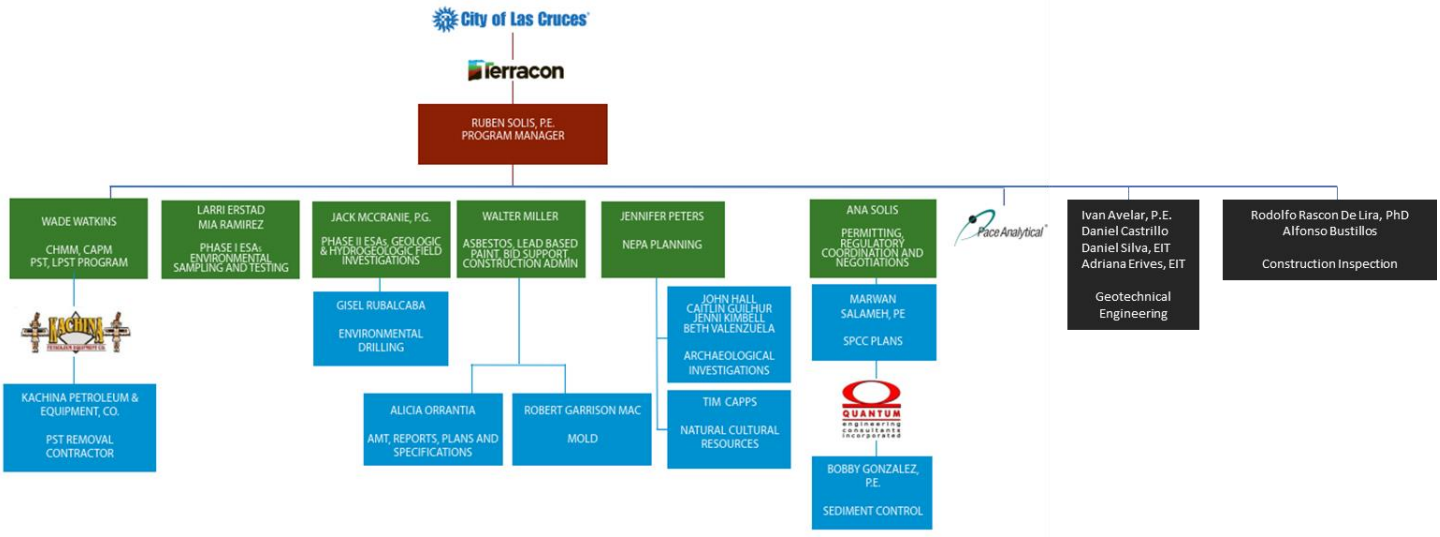
d. A project time schedule

With the atmosphere of a small firm and the resources of a global firm, Terracon can offer the City of Las Cruces a unique experience on the Environmental Program. Our firm has over two decades of knowledge in providing environmental services in Texas. This unique understanding of working within the guidelines and procedures of the state and local markets will allow our firm to provide the City of Las Cruces a comprehensive scope of service for each project. The ability to meet schedules and deadlines is a key attribute in building a successful working relationship

with our clients. Terracon prides itself in meeting schedules by: Employing committed professionals who are fully trained and experienced in the services they provide; Maintaining in-house resources; Coordinating the work through a single point of contact to effectively utilize our personnel and resources; Avoidance of oversights that result in lost time. Our team is organized to effectively manage fieldwork, deliverables and budget constraints.

2. To address Evaluation Criteria No. 2 (Qualifications/competence) below

a. Provide the names of key personnel who will be assigned to provide the services described herein. For each person listed, a description of experience, areas of competence and percent of time assigned to the project shall be provided



RUBEN SOLIS, P.E.
Program Manager

Mr. Solis serves as Office Manager in Terracon's Las Cruces, New Mexico and El Paso, Texas office. He has over 19 years of experience providing supervision, geotechnical engineering analysis, and recommendations for a variety of projects in the southern New Mexico and Texas Regions. His responsibilities include overseeing and supervising the Environmental, Geotechnical, and Materials Departments in Terracon's El Paso, Texas office.

ANA SOLIS
Lead Permitting/Compliance and Regulatory Coordinator

Ms. Solis has over 19 years of experience as an Environmental Project Manager in the areas regulatory permitting for greenfield and brownfield facilities, including petrochemical and manufacturing facilities. Ms. Solis has also performed multimedia health, safety and environmental (HSE) compliance audits, Phase I and Phase II environmental site assessments (ESA), and plant decommissioning services in the U.S. and Mexico. Ms. Solis has managed and performed Vapor Intrusion Evaluations and compliance programs including SWP3 and SPCC, Permit by Rule, EPCRA 312/313, RCRA, and prepared assessment reports under the Texas Risk Reduction Program (TRRP). She has also been involved as a team member in the development of remedial action plans and in the design of soil and groundwater remedial systems at several contaminant sites. She has also participated on emergency response projects, underground storage tank (UST) removal sites, phase-separated hydrocarbon recovery projects, mobile dual phase extractions, and work plan development.

Ms. Solis was employed from 2002 through 2004 by the University of Texas at El Paso (UTEP). While at UTEP, she worked on a project for the mobilization, immobilization, and sequestration of metals and radionuclides in the subsurface by manipulation of the aqueous carbonate system, which became the basis for her thesis.

WADE WATKINS, CHMM, CAPM
CHMM, CAPM PST, LPST Program

Mr. Watkins is a project manager with over 17 years of experience managing projects involving environmental investigations, site remediation and hydrogeological supply issues. Mr. Watkins has partnered in projects with North Texas municipalities for over 13 years. He has conducted numerous Phase I ESAs throughout Texas, including commercial/industrial properties, oil/gas facilities, residential properties and vacant land. He has experience evaluating impacts to sites with chlorinated solvents, petroleum hydrocarbons and metals by way of soil and groundwater contamination delineation, sensitive receptor surveys, groundwater characterization, and risk-based assessments. He has been involved in the investigation, oversight and closure of numerous Texas Commission on Environmental Quality (TCEQ) Voluntary Cleanup Program (VCP), Innocent Owner/Operator Program (IOP), leaking petroleum storage tank (LPST), corrective action (CA) and Dry Cleaner Remediation Program (DCRP) sites. He also performs National Policy Act Review (NEPA) Land Use Compliance reports for telecom projects, which includes FCC Tower Construction Notification correspondence, federal and state threatened and endangered species and State Historic Preservation Office (SHPO) assessments.

Mr. Watkins' experience includes subsurface vapor assessments, vapor barrier installation oversight and inspection, underground storage tank removals, supervision of water-production well installation; groundwater, surface-water and effluent sampling; groundwater contamination analysis and delineation; groundwater level monitoring; monitor-well installation and abandonment; aquifer testing by slug testing; step-rate testing and extended-period testing; aquifer-test analysis; installation, pilot testing, operation, maintenance and troubleshooting of groundwater and soil remediation systems; data analyses and mapping; wetlands and vegetation identification.

LARRI L. ERSTAD
Phase I ESAs, Environmental Sampling and Testing | Environmental Department Manager

Ms. Erstad is an environmental project manager in Terracon's Las Cruces, New Mexico office. She is responsible for managing environmental projects in Terracon's Las Cruces office including environmental site assessments, asbestos services and lead-based paint services. She has 15 years of experience in environmental consulting.

Ms. Erstad has conducted ASTM Phase I environmental site assessments, including lead-based paint surveys and asbestos sampling and assisting with Limited Site Assessments (LSIs). She has assisted with National Environmental Policy Act (NEPA) Environmental Assessments (EAs), and other NEPA related documents for the U.S. Federal Aviation Agency (FAA) and Stormwater Pollution Prevention Plans (SWPPP). She has experience with projects ranging from agricultural, residential, and commercial properties, to industrial manufacturing, EPA Brownfield sites, PST facilities, LPST facilities, RCRA hazardous waste generators, to wind and solar properties.

Ms. Erstad has experience in client interaction and marketing with numerous clients including private landowners, developers, local municipalities, major retail chains and large-scale lending institutions. She has experience in the coordination of site activities with local, state and federal regulatory agencies.

JACK MCCRANIE, P.G.
PHASE II ESAs, Geologic & Hydrogeologic Field Investigations

Mr. McCranie is responsible for managing environmental services in Terracon's Fort Worth office including environmental site assessments, subsurface investigations, remedial services, asbestos services and lead-

based paint services. He has more 25 years of professional experience in the environmental field. Mr. McCranie has experience with chlorinated solvents, petroleum hydrocarbons, and metals at a variety of facilities including industrial and commercial facilities. Mr. McCranie has been involved in the evaluation of hundreds of petroleum hydrocarbon and chlorinated solvent releases, which included the installation of monitor wells, delineation of soil and groundwater contamination, sensitive receptor surveys, groundwater characterization, and risk-based assessment evaluations. Mr. McCranie has been involved in the investigation, oversight and closure of numerous Voluntary Cleanup Program and leaking petroleum storage tank sites and has managed several EPA Brownfields Assessment Grants for cities.

Mr. McCranie is a Texas Department of State Health Services licensed asbestos inspector and license lead-based paint risk assessor. Mr. McCranie has conducted limited and comprehensive asbestos surveys, as well as limited and comprehensive lead-based paint inspections and risk assessments throughout the State of Texas.

WALTER MILLER
Asbestos, LBP, Bid Support

Mr. Miller's technical background includes 29 years of diverse environmental consulting in the West Texas – Southern New Mexico area. Mr. Miller has managed projects ranging from asbestos services in schools to the preparation of environmental documentation for an International Bridge. His responsibilities include budgeting, proposal preparation, human resources, quality review, and business development. Mr. Miller's technical experience includes asbestos consulting (Texas Individual Asbestos Consultant), Phase I and Phase II Environmental Site Assessments, Indoor Air Quality, National Environmental Policy Act (NEPA) documentation, Hazardous Waste Characterization, Noise Surveys, Subsurface Soil and Groundwater Investigations and many other aspects of the environmental consulting profession. Mr. Miller is also active in transportation planning and project development in the West Texas region. As a member of the Transportation Policy Board of the El Paso Metropolitan Planning Organization, he has been involved in the prioritization and scheduling of roadway and mass transit projects throughout the region.

JENNIFER TROMBLEY PETERS
NEPA Planning

Ms. Peters has over ten years of preparing and managing National Environmental Policy Act (NEPA) documents and over eighteen years of diverse professional experience specializing in environmental consulting, regulatory compliance and review, site investigation, technical writing, and site assessment. With additional experience in site remediation and emergency response. Her NEPA experience includes serving as a project manager, coordinator, and resource specialist specializing in water and hazardous material resources, and document author for Environmental Assessments and Categorical Exclusion documents for proposed actions including: programs, utility (water/wastewater, roadways), and facilities. Clients include municipal/local government agencies (cities and counties), U.S. Air Force (USAF), U.S. Postal Service (USPS), Veterans Affairs (VA), and utilities utilizing guidance and regulatory framework provided required by 40 CFR 1500, 32 CFR 989, and 24 CFR 58. Ms. Peters has worked for and with the USAF, USPS, U.S. Army Corps of Engineers, U.S. Navy, Bexar County, San Antonio Housing Authority, and various municipal (including city, state, and county) agencies.

CAITLIN GULIHUR, MA, RPA
Archaeological Investigations

Ms. Gulihur is a staff scientist and project manager, located in Terracon's Austin office. Her duties include conducting cultural resources fieldwork as a project archeologist and principal investigator, preparing reports, and managing digital spatial data using Geographic Information Systems (GIS). Ms. Gulihur has assisted with archeological projects across Texas as a field technician, project archeologist, and principal investigator. She has worked on construction monitoring projects and Phase I surveys performed in compliance with the Texas Antiquities Code and Section 106 of the National Historic Preservation Act (NHPA). She has also worked at a curation facility certified by the Texas Historical Commission (THC), overseeing

the curation of artifacts and records in compliance with the Texas Antiquities Code.

JENNI KIMBELL
Archaeological Investigations

Ms. Kimbell is a senior staff archeologist in Terracon's Houston office. She has worked in Cultural Resource Management since 2009 in roles ranging from field tech to Principal Investigator. The majority of her experience has been in Texas, but she has also worked in eastern New Mexico, Colorado, Kansas, and Oklahoma. Ms. Kimbell has worked on sites ranging in date from early Archaic to modern. Beyond archeology, her strengths include Geographic Information Systems; writing, editing, and quality control of documents; organization; and logistics. She has experience in handling prehistoric and historic-period artifacts in a laboratory setting and has led crews of up to 10 people and has consistently received positive feedback from supervisors, crew members, and clients. She is currently serving as chair of the Public Outreach and Membership Committee for the Texas Archeological Society and has conducted outreach activities at schools, community events, and professional meetings.

JOHN D. HALL, M.A., RPA
Archaeological Investigations

Mr. Hall is the Senior Archaeologist and Principal Investigator for Terracon's Las Cruces office. Mr. Hall oversees cultural resource management projects for Terracon in the U.S. Southwest. Mr. Hall is well-versed in the archaeology, history, and ecology of the U.S. Southwest, stone artifact technologies, landscape archaeology, geoarchaeology, spatial analysis, ethnoarchaeology, and settlement and subsistence systems; with particular experience in Archaic and Ceramic Period economic adaptations and material culture, as well as the adoption of agriculture in the prehistoric U.S. Southwest. Mr. Hall has over 20 years of experience in archaeology and has participated on a variety of archaeological projects in Arizona, California, Colorado, Nevada, New Mexico, Texas, Utah, and Washington as a supervisor, lithic analyst, or technician, since 1997. Mr. Hall has specific experience as a supervisor on large survey and data recovery projects in the U.S. Southwest.

S. ELIZABETH VALENZUELA
Archaeological Investigations

Ms. Valenzuela is an architectural historian in Terracon's Austin, Texas office. She has 20 years of professional experience in the field of preservation and historic architecture. She has supervised and participated in historic resources surveys, building documentation, archival research, and historic context development projects throughout the United States. She has worked with municipal governments, and state and federal agencies to identify, document, and provide National Register of Historic Places (NRHP) eligibility assessments for commercial, residential, governmental, industrial, rural resources and cultural landscapes. These projects have involved archival research using primary and secondary source materials at local, state, and national repositories, and condition assessments and field documentation using standardized field survey forms and digital and 35mm photography.

Ms. Valenzuela earned a Masters of Architecture degree from Texas Tech University and during her career has managed a broad range of cultural resource projects. These projects have included the identification and assessment of resources dating mostly from the early nineteenth century to the mid-twentieth century and have encompassed utilitarian structures, rural landscapes, vernacular and high-style residential, commercial, and institutional buildings. Ms. Valenzuela meets the Secretary of Interior Standards for Professional Qualifications in Architecture, Historic Architecture, and Architectural History.

TIM CAPPS

Natural Cultural Resources

Mr. Capps is the Group Manager for the Environmental Planning Department of Terracon's Dallas/Fort Worth Metro office. He has over 15 years of natural resource and environmental experience. Tim has demonstrated expertise in wetland delineations, jurisdictional waters determinations, Section 404 permitting, pipeline route studies, NEPA documentation, stormwater compliance, and Geographic Information Systems.

MARWAN F. SALAMEH
SPCC Plans

Mr. Salameh is an environmental engineer in the Dallas, Texas office. Mr. Salameh is responsible for managing projects related to soil and groundwater contamination with a focus on remedial actions and Spill Prevention, Control and Countermeasure planning. Marwan Salameh is a project Manager located in Terracon's Dallas office with 29 years of experience. His duties include conducting environmental investigations and remediation for the oil & gas, manufacturing, municipal, and Federal clients He is well versed in risk assessments, regulatory negotiations, remedial design/remedial action, site closures, and various compliance aspects including Spill Prevention and Countermeasure (SPCC) Plan development or recertification. He is a licensed professional engineer (License No. 81554) in Texas. Mr. Salameh will function as the PE for the SPCC plans. Mr. Salameh's experience is focused in the environmental field and has worked on numerous sites particularly in Texas, Louisiana, and Oklahoma. Mr. Salameh supported oil & gas, manufacturing, and municipal and Federal clients in assessing environmental liabilities associated with active and inactive facilities and led teams responsible for conducting site investigations, risk assessments, regulatory negotiations, remedial design/remedial action, and site closures.

IVAN AVELAR, P.E.
Senior Project Manager / Geotechnical Task Lead

Mr. Ivan Avelar, PE, who has over 18 years of engineering experience, has been assigned the role of Geotechnical Task Lead for the City of El Paso. Mr. Avelar is the Department Manager of Geotechnical Services in Terracon's El Paso, Texas and Las Cruces, New Mexico offices and is a licensed Professional Engineer in the State of Texas (License No. 108468) and New Mexico (License No. 22300). He will oversee the coordination and progress of the geotechnical field, laboratory, and engineering stages for the program.

DANIEL J. CASTRILLO
Geotechnical Project Manager

Mr. Castrillo is a staff geotechnical engineer in Terracon's Las Cruces, New Mexico office. He prepares scopes of work, coordinates, schedules, performs, supervises field investigations or inspections and creates geotechnical engineering reports. Daniel reviews and interprets soil data collected and laboratory tests results to measure physical and non-physical properties of soil from a geotechnical, geological, or environmental standpoint. He performs engineering calculations and analysis for foundation and pavement design and assists other office, laboratory and field staff in the performance of geotechnical and construction materials testing, draft reporting of test results, and review of technical reports.

RODOLFO RASCON DE LIRA, PHD
Materials Testing Project Manager, Materials Testing Lead

Mr. Rascon De Lira serves as a Manager in the Materials department at Terracon's El Paso office. He is responsible for preparing proposals, managing project budgets, and delivering construction testing and materials reports. He has overseen geotechnical and construction projects, including school facilities, detention ponds, roads, bridges, residential developments, and commercial buildings. In addition, Mr. Rascon De Lira has been involved in projects that include pile load testing, and pavement evaluation and design.

ALFONSO BUSTILLOS

Materials Testing Project Manager
Mr. Bustillos serves as a Project Manager in the Materials department at Terracon's El Paso office. He is responsible for preparing proposals, marketing task, prepares and complete engineering reports, managing project budgets, supervise technical personnel and delivering construction testing and materials reports.

Availability of Key Personnel

A summary of the availability of proposed personnel and anticipated levels of involvement through the contract term is provided in the table below. As can be seen, the anticipated time available significantly exceeds foreseeable contract requirements.

Personnel	Availability			
	25%	50%	75%	100%
RUBEN SOLIS-HERDANDEZ, P.E., Administration Manager	■			
ANA SOLIS, Permitting, Regulatory Coordinator and Negotiations | Environmental Department Manager	■			
WADE WATKINS, CHMM, CAPM, CHMM, CAPM PST, LPST Program	■			
LARRI L. ERSTAD, Phase I ESAs, Environmental Sampling and Testing	■	■	■	
JACK MCCRANIE, P.G., PHASE II ESAs, Geologic & Hydrogeologic Field Investigations	■			
WALTER MILLER, Asbestos, LBP, Bid Support	■	■
